STUDENT DECLARATION

MA (LMDS)

Student Declaration

1. I certify that this thesis does not incorporate without acknowledgement any material previously submitted for a degree or diploma in any university; and that to the best of my knowledge and belief it does not contain any material previously published or written by another person except where due reference is made in the text.
2. I declare that no Artificial Intelligence (AI) tools were used to complete all or any part of this thesis.
3. Permission is given for the Defence Forces Library and Maynooth University Library to lend or copy this thesis upon request.
4. The views and conclusions expressed herein are those of the author and do not necessarily represent the views of the Military College, the Defence Forces or the Maynooth University.

Author's Dissemination Permission

The author authorises circulation for non-commercial professional military education, particularly among infantry units, junior commanders and staff officers concerned with the implications of persistent ISR for light infantry.

Abstract

15,000 words

[The abstract is formatted differently from the body text. Place your abstract text here.]

Cumulus clouds are puffy, rounded masses that drift across the sky on fair-weather days, resembling heaps of cotton wool or floating cauliflower. They form when warm air rises, cools, and its moisture condenses into visible droplets. Their flat bases sit at a fairly uniform height where condensation begins, while their tops billow upward in bright white domes. Lit by the sun, they appear brilliant against blue sky, with shadowed undersides in grey. Most stay small and harmless, but when they grow tall and dense they can build into towering cumulonimbus storm clouds, bringing rain, lightning, and gusty winds.

INTRODUCTION — chapters are capitalised

Some notes

The introduction and conclusion are not numbered and are therefore encoded slightly differently to the chapters.

1 CHAPTER TITLE

1.1 Numbered Section: Sample body with common functions used

This thesis template — unlike most others — is written in LaTeX¹. The Maynooth University History Department’s style requirements are fully encoded in this template. You’ll need to populate `Metadata.tex`, `Glossary.tex` and `Bibliography_Master.bib` yourself. Hyphens are - (well-known punctuation), en dashes are – (human–machine teaming) and em dashes are — (used for asides).

Calling glossary items in this way allows differentiation between simple acronyms and full glossary entries: Improvised Explosive Device (IED) Vs glossary entry.

A table might look like this:

Component	Cost (€)
13” drone	€742
Fibre spool	€38.3 km ⁻¹
1 kg explosive	€50 kg ⁻¹
2 x Electric detonator	€100 det ⁻¹
Total per drone	10 km = €1,375 & 70 km = €3,673

Table 1.1: Estimated Fibre-Optic FPV-OWAD Cost (exclusive of VAT)

Referring to a label is done like this: Table 1.1.

¹Which is far superior to MS Word.

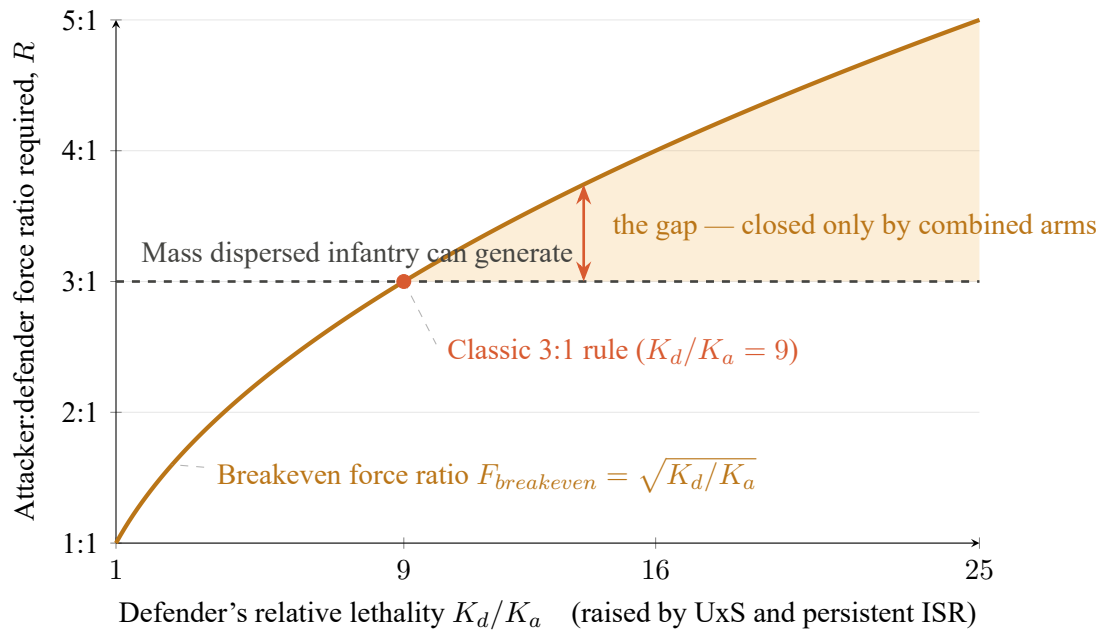

Figure 1.1: CBRN EOD grief

- Posscite: Tollast's (2025) does the apostrophe.
- Textcite: Watling (2023) is an inline citation.
- Parencite: (Watling, 2025) is a parenthetical citation.
- Referencing pages: Maynooth don't use pp. The colon is coded in the template, Watling (2023: 5) and (Department of Defence and Defence Forces, 2024: 7–8).
- Multiple citations is simple: Hall et al. (2021), Watling (2023), and Watling (2025). Maynooth order them chronologically in the text and alphabetically in the bibliography. The template will do all of that, and there's no need to order them in multiple citations.
- Page number for one entry in a multiple citation. Doesn't really work, but can do for one reference: like (Hall et al., 2021; Watling, 2023: 99–100). It's better to do (Hall et al., 2021: 99–100) and (Watling, 2023).
- Index:

Bibliography

Manually populate `Bibliography_Master.bib`. Suggest using VSCode to view it rather other environments (such as JabRef). Take care to populate the fields per the template bib and your bibliography will build correctly — with the correct formatting. Titles are sentence case (not every word is capitalised) and the author's only use surnames and initials like **Thomas, A. R.**.

CONCLUSION

The introduction and conclusion are not numbered and are therefore encoded slightly differently to the chapters.
