FINAL DECISION ON MC 0319/3

NATO PRINCIPLES AND POLICIES FOR LOGISTICS

On 08 Aug 14 the North Atlantic Council approved MC 0319/3 (Military Decision).
C-M(2014)0043-AS1, 08 Aug 14 refers. MC 0319/3 (Final) supersedes:

- MC 0319/2 (Final), NATO Principles and Policies for Logistics, 28 May 04
- MC 0526 (Final), Logistics Support Concept for NATO Response Force (NRF) Operations , 27 Jul 05 and
- MC 0536 (Final), Military Committee Policy for Infrastructure Engineering for Logistics, 17 Jan 06

FOR THE MILITARY COMMITTEE:

A blue ink signature, appearing to read "CH", with a large, stylized circular flourish above it.

Sir Christopher Harper
Air Marshal
Director General
International Military Staff

NOTE: This Final Decision Sheet shall now be attached to MC 0319/3 as the top sheet. Page numbering of the complete document when this decision is attached is as follows:

MC 0319/3 (Final)	Page 1
MC 0319/3 (Military Decision)	1 page
MC 0319/3	32 pages

Distribution: As for basic document.

NORTH ATLANTIC MILITARY COMMITTEE
COMITE MILITAIRE DE L'ATLANTIQUE NORD

09 July 2014

MC 0319/3 (Military Decision)

SECRETARY GENERAL, NORTH ATLANTIC TREATY ORGANISATION

MILITARY DECISION ON MC 0319/3

NATO PRINCIPLES AND POLICIES FOR LOGISTICS

1. On 7 Jul 14, the Military Committee endorsed MC 0319/3, which is now submitted to the North Atlantic Council for their consideration and approval.
2. This document clears IMSWM-0225-2014, 10 Jun 14.

FOR THE MILITARY COMMITTEE:

Ludwig LEINHOS
Major General DEUAF
Director
NATO Headquarters C3 Staff

 Sir Christopher HARPER
Air Marshal
Director General
International Military Staff

Enclosure:

1. MC 0319/3, NATO Principles and Policies for Logistics

Copy to: SDL T, IS DPP,
ALL EURO-ATLANTIC PARTNERSHIP MILITARY REPRESENTATIVES,
DEFENCE ADVISER TO NATO, AUSTRALIAN EMBASSY AND
MISSION TO THE EUROPEAN COMMUNITIES

Action Officer: LtCol K. Garbe, L&R (5628)

NATO/EAPC UNCLASSIFIED

MC 0319/3

NATO PRINCIPLES AND POLICIES FOR LOGISTICS

NATO/EAPC UNCLASSIFIED
Releasable to Australia

PART I – INTRODUCTION

BACKGROUND

1. The Alliance's Strategic Concept (Reference A), approved by NATO Heads of State and Government in Lisbon on 19 November 2010, reconfirms NATO's approach to the security challenges in the 21st century. It provides guidance how the Alliance will undertake the full spectrum of its Alliance Operations and Missions (AOM) through a common set of Alliance structures and procedures and underlines its commitment to collective defence, crisis management and cooperative security. The decisions reconfirm that the Alliance will develop and maintain robust, mobile and deployable conventional forces to carry out both Article 5 responsibilities and expeditionary operations, including the NATO Response Force (NRF).
2. The Political Guidance (Reference B) provides more detailed direction for the continuing transformation of defence capabilities and forces and the implementation of the defence-related aspects of the Strategic Concept agreed at Lisbon. Since only a few Allies can independently deploy and sustain their forces, it is important that NATO and Allies continue to pursue Collective Logistics with the aim to give NATO commanders the greatest flexibility on current and future missions by providing effective logistics support, especially improved deployability and enhanced sustainability, more capable and interoperable logistics forces and optimised logistics command and control, at best value to Allies¹.
3. The MC Guidance for the Military Implementation of Alliance Strategy, MC 0400/3 (Reference C), translates the Alliance's Strategic Concept and the Political Guidance into military terms, underlining NATO's contribution to a more comprehensive approach to security after expansion of AOM, particularly with regard to NATO's enhanced cooperation with the European Union (EU), the Organisation for Security and Cooperation in Europe (OSCE), the United Nations (UN), other International Organisations (IO) and Non-Governmental Organisations (NGO).
4. Subsequently, the Alliance has taken steps to adapt its command and force structures to meet the needs of the changed security environment. The MC Policy for Allied Forces and their use for operations are further elaborated in MC 0586/1 (Reference D). Necessary changes in the NATO Command and Force Structure, to better enable them for the conduct of deployed operations are set out in MC 0324/3 (References E). For non-Article 5 Crisis Response Operations (CRO), NATO military policy is further described in MC 0327/2 (Reference F).
5. All these documents underline the importance of NATO having forces that can move quickly to wherever they are needed, sustain operations over strategic distance² and time, and achieve their objectives. There will be a continuing need to adapt to new challenges and to ensure that the Alliance and NATO nations are organized to deploy, sustain and redeploy forces capable of responding to emerging threats in the future, including environmental sensitive base closure and disposal of equipment and supplies.

¹ Reference B, Political Guidance 2011 - Appendix 1 to Annex 1, paragraph 17.

² Reference B, Political Guidance 2011 defines strategic distance as 15,000 km from Brussels.

6. Greater emphasis on more expeditionary operations has significant implications for NATO logistics policy and posture. In particular, the scope of AOM for NATO forces includes the deployment of a rapid military response beyond NATO territory. The deployment of forces to locations with little or no Host-Nation Support (HNS), over strategic distance from NATO territory along extended and perhaps very limited lines of communication (LOC), places an emphasis on deployable logistics capabilities. In addition to deployable logistics support units organic to tactical formations, such capabilities include effective and timely access to strategic lift and deployable theatre-level logistics³ enablers with adequate logistics command and control (C2).

7. The uncertain location of AOM and composition of forces to be deployed poses challenges for logistics readiness. In order to provide timely and effective logistics support from the onset of AOM, sufficient logistics capabilities must be available at least at the same level of readiness, deployability and mobility as the forces they support. AOM of any significant duration also raise sustainability issues, including those relating to the logistics force elements required to keep the Allied forces supplied and maintained. To reduce the operational logistics footprint and the cost of sustaining the AOM, NATO encourages collective logistics in the delivery of support where it is consistent with maintaining or enhancing military effectiveness. Growth in multinational force structures and modalities needs to be supported by robust, effective and responsive theatre-level logistics capabilities and logistics C2 arrangements.

8. In addition to the political and military strategic influences on NATO logistics policy and principles outlined above, a number of wider developments have occurred since the North Atlantic Council (NAC) endorsed MC 0319/2 in 2004. These include: promulgation of the NATO Logistics Vision and Objectives, developments in contractor logistics support to AOM (Reference G), a Comprehensive Approach (CA) to AOM, Stabilization and Reconstruction (S&R) missions, and the concept of the Joint Logistics Support Group (JLSG) to command assigned forces and coordinate theatre-level logistics for the Joint Force Commander (JFC) within the agreed limits of Logistics Control (LOGCON) iaw the Transfer of Authority (TOA). These new factors are reflected in this revision of MC 0319 to provide an authoritative up-to-date coherent NATO logistics policy foundation for other NATO documents. Logistics support management developments within Alliance nations that are relevant to NATO and strategic level logistics policy implications of experience gained from recent AOM are also taken into account.

9. Logistics must support the full range of AOM including contributing to a CA that effectively combines political, civilian and military crisis management instruments. Logistics support capabilities and stocks are critical for all AOM that NATO may undertake, including for a disaster relief or a S&R mission. As an operational enabler, logistics has two functions: effective logistics enables a NATO force to project and sustain military power over extended distances and logistics can provide operational effects throughout the whole spectrum of mission types. The provision of assistance with NATO military logistics resources and capabilities in International Disaster Relief Operations (IDRO) is covered in MC 0343/1 (Reference H) and must be approved by the NAC.

³ Theatre-Level Logistics: A collection of means, resources, organizations and processes derived from the strategic logistics level and utilized by the Joint Force Commander to support the tactical level of logistics.

AIM

10. This document identifies the principles and sets out the broad strategic policies for logistics. NATO and national authorities should be guided by and apply them in any area with logistics implications. Terminology used in this document is contained in the Lexicon at Annex A and Abbreviations used are listed in Annex B.

APPLICABILITY

11. The following principles and policies apply to peace, crisis and conflict and include exercises, AOM under Article 5 of the North Atlantic Treaty as well as non-Article 5 CRO. They also apply to AOM involving non-NATO nations in NATO-led operations. They provide sufficient flexibility for close cooperation with other relevant organisations as required.

PART II – LOGISTICS PRINCIPLES AND POLICIES

GENERAL

12. In order to achieve the logistics vision and strategic goals extracted from the Political Guidance⁴, the following overarching logistics principles should be applied to the development of policy and doctrine to provide the necessary comprehensive and seamless foundation for assured effective and coherent logistics support to any possible AOM. These basic principles may be elaborated and/or supplemented by other principles specific to particular functional areas of logistics.

POLICY STATEMENT

13. NATO and nations have a collective responsibility for logistics support of AOM. Nevertheless, NATO recognizes that the ultimate responsibility for support of national forces lies with the respective nations.

DEFINITIONS

LOGISTICS

14. Logistics is the science of planning and carrying out the movement and maintenance of forces. In its most comprehensive sense, the aspects of military operations which deal with:

- a. design and development, acquisition, storage, movement, distribution, maintenance, evacuation, and disposal of materiel;
- b. transport of personnel;
- c. acquisition or construction, maintenance, operation, and disposition of facilities;
- d. acquisition or furnishing of services; and
- e. medical and health service support⁵.

⁴ Reference B, Political Guidance 2011 - Appendix 1 to Annex 1, paragraph 17.

⁵ Belgium, Czech Republic, Germany, Hungary, Slovakia, and the United States do not consider medical and health service support to be a logistics function.

COLLECTIVE RESPONSIBILITY FOR LOGISTICS

15. Collective Responsibility for Logistics is *"The set of NATO's and nations' individual and largely complementary obligations to cooperatively organise and deliver the overall logistics support of NATO operations, taking into account one another's requirements and constraints."* Collective Responsibility for Logistics reflects the fact that neither NATO nor a nation is capable of assuming complete responsibility for the logistics support of a NATO-led operation. As a consequence, NATO and nations bear the obligation, taking account of each other's requirements and constraints, to cooperate in the logistics support of operations in a way that their common efforts meets the overall requirement.

COLLECTIVE LOGISTICS

16. Collective Logistics is the overall approach to execute the Collective Responsibility for Logistics. Collective Logistics is *"The collective approach undertaken by NATO and nations to plan, generate, synchronize and prioritize national and NATO logistics capabilities, resources and activities to deliver logistics support to NATO missions, operations and exercises, by making use of common processes and organizational structures."*

17. Collective Logistics encourages nations and NATO to cooperatively share the provision and use of logistics capabilities and resources to support the force effectively and efficiently. Standardization, cooperation, multi-nationality in logistics and robust logistics C2 build together the basis for flexible and efficient use of logistics support thereby contributing to the operation's success.

LOGISTICS PRINCIPLES

AUTHORITY

18. There is an essential interdependence between responsibility and authority. The responsibility assigned to any NATO commander must be matched with the delegation of authority by nations and NATO to allow the adequate discharge of responsibilities in order to receive, employ, sustain and redeploy capabilities assigned to NATO by nations in the most efficient manner.

PRIMACY OF OPERATIONAL REQUIREMENTS

19. All logistics support efforts, from both the military and the civilian sector, should be focused to satisfy the operational requirements necessary to guarantee the success of the AOM.

COORDINATION AND COOPERATION

20. Cooperation and coordination across the full spectrum of logistics, including between the civilian and military sector within and between Allies, will contribute to the best use of limited resources. Generic and standing pre-arranged agreements are the tools to facilitate logistic coordination and cooperation. The overall responsibility for coordination lies with NATO and should be conducted as a matter of routine under the authority of the NAC. Cooperation and coordination with partner nations and relevant international organisations will be implemented by NATO bodies and staff in accordance with C-M(2008)0029-COR1, C-M(2011)0022, PO(2011)0124 and other relevant decisions, including those taken at the Lisbon Summit.

ASSURED PROVISION

21. Nations and NATO must ensure the provision of logistics resources to support the forces and capabilities allocated to NATO during peace, crisis and conflict.

SUFFICIENCY

22. Logistics support must be available in the necessary quantity and quality, when and where it is required throughout the full spectrum of AOM. It must be ensured for any NATO-led operation continuously for the duration required to accomplish the mission.

EFFICIENCY

23. Logistics resources and capabilities must be used effectively and efficiently. Requirements must be identified and addressed in a timely manner to optimise the efficient provision and effective use of such resources and capabilities. Therefore, from the onset of the Operations Planning Process (OPP), NATO and nations must consider multinational solutions prior to deciding to choose national solutions.

SIMPLICITY

24. Uncomplicated mission-orientated logistics organizations, structures and procedures minimise confusion and help to ensure that the support provided meets NATO commander's requirements. Additionally, clear orders, simple plans and reporting mechanisms ensure accurate and efficient dissemination of information and minimise misunderstandings.

FLEXIBILITY

25. Logistics support must be adaptive and flexible to be effective. Adequate planning allows NATO and nations to react in a timely manner to changes in the operational situation and/or requirements.

VISIBILITY

26. Visibility of logistics resources and capabilities is essential for effective and efficient logistics support and will be provided by NATO and nations' logistics information management services, as required. National and NATO logistics information services require a facilitation of the delivery of the right information, because NATO commanders require timely, accurate and relevant information to make effective decisions and to plan and coordinate logistics operations in the Joint Operations Area (JOA). Visibility of nations support arrangements (e.g. LOCs and transit areas) will assist NATO commanders in the planning for and execution of AOM. The key to this information is visibility on logistics requirements, resources, capabilities and processes. This visibility must extend across the multiple levels of management and command for NATO, nations and other actors and must provide the information required at each level.

PART III – COMMAND AND CONTROL

GENERAL

27. NATO forces must operate under the principle of Unity of Effort and should adhere to Unity of Command to the maximum extent possible by reducing national or component support stovepipes and increasing multinational, joint and collective logistics cooperation. Logistics C2 and coordination must be effective. Support should be provided by balancing the peacetime provision and locations of logistics resources and capabilities with stockpiles and the ability to resupply and reinforce to ensure timely and continuous support.

RESPONSIBILITY

28. NATO commanders are responsible for the development and promulgation of a logistics support concept as an essential part of the operations plan (OPLAN). This concept must identify the structures and procedures required to reduce competition for scarce resources and capabilities by nations and NATO HQ and include the implementation of the different types of logistics support. Contractual support solutions as well as the employment of a Contract Integrator (CI) must be considered from the outset of the planning process. Appropriate responsibility and authority should also be granted to a non-NATO commander of a multinational force within a NATO-led operation. Vice versa, the NATO commanders' responsibilities will also apply for non-NATO nations' troop contingents within NATO-led operations.

29. The JFC is responsible for logistics planning and coordination within his area of responsibility and, in concert with Troop-Contributing Nations (TCN), for establishing the common logistics requirements for all phases of AOM. The JFC is further responsible to facilitate the development of collective solutions with nations and for executing theatre-level logistics support, using assigned national, Host-Nation (HN), IO/NGO and/or commercial resources and capabilities.

30. Nations are responsible for ensuring that units and formations assigned to NATO are properly supported by an effective and efficient tailored logistics structure for the AOM, including a proportional contribution to theatre-level support capabilities.

31. Nations, through National Support Elements (NSE), have the ultimate responsibility for equipping their forces and for ensuring, individually or by collective arrangements, the provision of required logistics resources and capabilities to support the forces assigned to NATO during peace, crisis and conflict. Their mission is nation-specific support to units and common support that is retained by the nation. NSEs are required to coordinate and cooperate with NATO commanders and the HN. Efficient support for deployable headquarters, NATO owned equipment and theatre capabilities require collective solutions.

32. Nations control their own capabilities, until release to NATO through the TOA mechanism at the Port of Debarkation (POD), or at the latest after Reception, Staging, Onward Movement and Integration (RSOI)⁶ at the Final Destination (FD). For high readiness forces (e.g. NRF), TOA to the JFC shall occur at the Port of Embarkation (POE), in order to allow the JFC proper control of the rate and order of arriving forces into the JOA. The JFC assumes control of common funded capabilities as directed, and is responsible for their logistics support.

AUTHORITY

33. The JFC must exercise appropriate authority, allocated to him by the TCNs, over the logistics capabilities necessary to receive, employ, sustain and redeploy forces assigned to NATO by nations in the most effective manner. This authority also applies to non-NATO commanders of a multinational force participating in a NATO-led operation or to operations where NATO capabilities, as agreed by the NAC, are used.

34. NATO commanders require clearly defined authority to establish a support organisation to meet operational requirements. Logistics support and coordination structures must provide the JFC with the authority to support the force by using all logistics resources and capabilities within the JOA, with the prior concurrence of nations.

35. The JFC assumes C2 of common funded logistics capabilities and Operational Control (OPCON) of assigned national or multinational logistics capabilities, as directed. To promote Unity of Effort, the JFC must have the proper authority to execute theatre-level logistics functions and activities within the agreed limits of LOGCON iaw the TOA.

36. NATO commanders have, in their area of responsibility, the authority to redistribute the logistics capabilities of nations for the overall support of the forces in accordance with pre-agreed terms and conditions, in order for nations to maintain control on the way logistics resources and capabilities will be shared. For medical assets, this authority lies at the level of the operational JFC⁷.

37. NATO commanders need adequate visibility of logistics capabilities; therefore they are authorized to require reports on specified logistics capabilities designated to support the forces under their command. For non-NATO nations, this will include the inspection and certification of logistics units and specified capabilities prior to the deployment.

38. The JFC has the authority to establish requirements, prioritise resources and capabilities, contribute to civil-military planning and initiate the HNS planning process to include negotiating support. The JFC also has the authority to conclude HNS arrangements for multinational NATO HQs and other common funded entities.

39. The JFC has the authority to establish the Movement and Transportation (M&T) requirements and to initiate, prioritise, co-ordinate, and de-conflict movements in support of AOM.

⁶ The contracted acronym RSOI is commonly used for the combination of RSOM + I for Integration, but both acronyms describe the same process.

⁷ See Reference J.

LOGISTICS COMMAND AND CONTROL

40. The JLSG HQ is the primary logistics C2 organisation at theatre-level for the JFC. In coordination with the Combined Joint Logistics Staff (CJ4), the JLSG is responsible for coordination and execution of multinational theatre-level logistics support. When there is no requirement to deploy a complete JLSG HQ, the JFC – or single service commander for a single service AOM - will tailor the required logistics C2 for the AOM using the resources available. This may be an augmented Joint Force HQ – Combined Joint Logistics Staff (JFHQ – CJ4) or, in case of single service operations, the A4-, G4- or N4-Staff of the NCS HQ, who will directly or through additional staff elements coordinate activation and activities of theatre capabilities (e.g. ALSS/FLS)⁸. Although nations retain control over national logistics capabilities, the JFC will determine the logistics support structure to satisfy the requirements of a specific operation, considering options from both the NATO Command and Force Structures (NCS & NFS). This will be decided early in the OPP, in concert with TCNs, so that the designated units can undertake the relevant planning and preparation.

41. Whenever possible, logistics units providing theatre-level logistics support, such as Multinational Integrated Logistics Units (MILUs) and specific logistics support units identified and provided by nations through the Force Generation Process (FGP), should be provided under OPCON. This will ensure that effective logistics to support the AOM can be planned for and executed under Unity of Command. Those capabilities belonging to the national support chain, including units performing Logistics Lead Nation (LLN) and Logistics Role Specialist Nation (LRSN) missions, should be provided to the JFC within the agreed limits of LOGCON iaw the TOA.

LOGISTICS INFORMATION MANAGEMENT

42. NATO and nations will provide proper visibility of logistics information by executing Logistics Information Management (LIM) according to the NATO Information Management Policy (NIMP)⁹ and by applying the Primary Directive for Information Management (PDIM)¹⁰.

43. NATO and nations have numerous users requiring executive, managerial and operational logistics information. For logistics operations to be effective, it is of critical importance that nations deliver to the logistics information systems the right information - using the right information security protection - to the right people at the right time, so that these people can provide the NATO commanders with the necessary visibility over logistics operations, a service that then can be returned to the TCNs. The LIM should cover all logistics functions and will interface between these functions and other functional areas as required. NATO logistics systems need to be interoperable with both existing and emerging national and NATO systems. Interfaces with commercial systems should also be considered where practical and cost effective. NATO and nations should develop and implement information systems and structures that support the LIM.

⁸ Advanced Logistics Support Site (ALSS)/Forward Logistics Site (FLS)

⁹ See Reference K.

¹⁰ See Reference L.

44. NATO commanders will be provided with all relevant logistics information necessary to establish a Theatre-level Recognised Logistics Picture, which contributes to the overall situational awareness in their respective area of responsibility.

PART IV - PLANNING AND PREPARATION

LOGISTICS PLANNING IN NATO

45. Logistics planning focuses on pre-arranging support for deployed military forces or civilian capabilities. From a NATO perspective, multinational logistics theatre-level capabilities and collective logistics C2, are important parts of these arrangements. There are two distinct areas of logistics planning in NATO, the OPP, which is concerned with the conduct of actual AOM, and the NATO Defence Planning Process (NDPP).

LOGISTICS PLANNING IN DEFENCE PLANNING

46. Logistics planning is one planning domain in the NDPP. It is at this level of planning that identification of the civil and military logistics resources and capabilities required to deploy, receive, sustain and redeploy Alliance forces to match NATO's Level of Ambition (LoA), is carried out by the Strategic Commands (SCs) in consultation with nations and other relevant actors. The resulting logistics support concepts, structure and procedures must be tailored to the respective forces and their related employment and support options. Within the NDPP, medical support is a separate planning domain and therefore separate processes for medical capabilities apply.

47. The Strategic Commands must ensure timely and proper inclusion of Minimum Capability Requirements (MCR) for logistics forces and capabilities in the NDPP so that nations, including Partnership for Peace (PfP) Planning and Review Process (PARP) nations, can be encouraged to acquire and then to provide them, individually or through multinational cooperative arrangements, to NATO for its use during NATO-led or NATO-supported AOM. The authority, responsibility and funding for multinational logistics arrangements are to be established prior to and/or during the OPP.

48. The SCs are responsible for developing stockpile requirements in consultation with nations and publishing them to nations as part of the NDPP, in order to support nations' generic and long term stockpile planning within the overall NDPP. NATO stockpile targets will provide adequate guidance for all classes of supply and should be considered along with other national commitments to homeland defence, training and participation in other IOs. However, where no such guidance has been developed by NATO, national planning factors should apply in accordance with MC 0055/4 (Reference M).

LOGISTICS OPERATIONS PLANNING

49. The logistics OPP is covered in MC 0133/4, NATO's Operations Planning (Reference N) and augmented by the ACO Functional Planning Guidance – Logistics (FPG-Log). The level of detail is related to the planning category (strategic or operational) and the level of responsibility. Logistics support must be tailored to the respective forces for all AOM. All Logistics Functions, described later in this document, are vital and indispensable parts of the planning process.

50. Logistics operations planning must be comprehensive, engaging all relevant military and civil, national and international actors prior to and as part of the OPP. This approach should deliver improved situational awareness, enhanced collaboration and optimal employment of resources and capabilities.

51. Nations and NATO must engage in collaborative logistics planning from the start of the OPP, in order to achieve the optimum use of resources and capabilities, the timely delivery of effective and efficient logistics support and to exploit the potential benefits of multi-nationality. The FGP must then take into consideration the various levels of interoperability of national capabilities. Logistics operations planning must consider HNS, the contributions of non-NATO nations and other organisations as well as multinational and contractor support solutions. The primary focus of logistics operations planning is to identify requirements and potential support solutions, that NATO and nations can select and implement prior to deployment.

52. The JOA could be comprised of several bases that will be used by NATO and nations deploying forces for AOM and support activities. The basing allocation is primarily an operations' staff responsibility. Logistics planners must ensure, based on HNS information such as ammunition and fuel storage capabilities, intra-theatre transport infrastructure network, availability of contracted capabilities and other support considerations, that proper and timely advice to operations planning staff is provided and an optimized theatre basing plan can be effectively and efficiently supported.

LOGISTICS READINESS AND SUSTAINABILITY

53. Logistics sustainment must support NATO's LoA as defined in the Political Guidance. National and NATO logistics plans must ensure that sufficient quantity and quality of logistics resources and capabilities are available at least at the same readiness category as the forces they support. These logistics resources and capabilities must cover the entire spectrum of AOM¹¹.

COOPERATION IN LOGISTICS

54. Cooperation in logistics should be considered the most efficient means to meet logistics resource requirements. Measures that enhance the overall efficiency of logistics support include the whole range of multinational support options, contractor support, leasing, common or multinational procurement, pre-positioning, pooling and sharing with other nations, and arrangements for the cooperative acquisition and management of certain logistics stocks. A framework and further

¹¹ For detail see Reference M.

guidelines forming the basis for cooperation in logistics are laid down in NATO's Policy on Cooperation in Logistics (Reference O), which seeks to enhance cooperation by establishing a common vision across the full spectrum of logistics to provide the best support to the Alliance.

REDISTRIBUTION

55. Nations are required to sustain their forces, individually or by collective arrangements¹². Nations have first call on the logistics resources and capabilities integral to their forces. However in exceptional circumstances, when achieving the mission objectives is at danger, the JFC may direct the redistribution of national logistics resources to overcome unanticipated deficiencies. Redistribution is not intended to redress national stockpile shortages.

56. Logistics resources and capabilities held by units under OPCON are subject to redistribution within the limitations stated in the TOA message. Resources and capabilities within the NSE, or any other logistics resources and capabilities declared unavailable by nations, are not subject to redistribution. However, this does not preclude the JFC from requesting assistance from a national contingent or NSE commander when deemed necessary.

57. While all NATO commanders have logistics responsibilities and authorities, redistribution authority is limited to the JFC, by exception and under pre-agreed circumstances and conditions. JLSG, Air, Land and Maritime Component Commanders as well as other commanders, including commanders of assigned multinational units having delegations in line with the TOA arrangements, have only delegated redistribution authority on behalf of the JFC. The redistribution authority granted to a NATO commander generally comes into effect upon TOA.

58. If time allows prior to effecting redistribution, or as soon as practical afterwards, the JFC shall advise the affected national authorities and appropriate NATO commanders of the redistribution action(s). Upon determination that redistribution is required, the JFC shall direct applicable subordinate commanders of national elements to affect the transfer of the logistics resources and capabilities. As soon as the situation permits, nations receiving logistics resources and capabilities transferred under this authority will replace the resources and capabilities or reimburse the providing nation(s) as arrangements dictate.

MULTINATIONAL LOGISTICS

59. Multinational logistics is a vital component of collective logistics. It is one of the modes of logistics support¹³, which has proven to enhance effectiveness and efficiency. More specifically, the benefits of multinational logistics can be some or all of the following: faster deployment, reduction of the overall costs, the ability of nations to contribute their faire share of support, the reduction of the logistics footprint, improvement of the flexibility of the force, conservation of scarce local resources and capabilities as well as optimisation of specific national expertise.

¹² For detail see Reference M.

¹³ The different modes of logistics support are addressed at logistics doctrine level.

60. During the NDPP and the OPP, the applicability, necessity and benefits of multinational logistics must be considered. Unilateral national logistics decisions could adversely impact the effectiveness of the NATO commander's mission. NATO experience in operations demonstrates that once national logistics support structures have been established, it is difficult to move towards multinational logistics solutions. Therefore, multinational logistics solutions should be pursued at the outset of the logistics planning process and considered by NATO and nations as the norm prior to considering feasible national solutions for a particular operation.

61. Multinational logistics support will normally be initiated and coordinated by nations and facilitated by the JFC. During the OPP, the JFC, in concert with the TCNs, will consider these options and select the most appropriate types of multinational support for the specific operation. NATO-led AOM will typically employ a mix of support options, which should then be flexibly applied to ensure the required support for the Allied forces.

62. Multinational logistics arrangements should be planned, prepared and implemented prior to an operation, in order to deliver optimal effect and efficiency. However, when the situation evolves during the operation it might be necessary to implement or adjust these arrangements. Retaining the overall operational responsibility for the operation, the JFC is well suited to act as broker between nations to facilitate such multinational arrangements. This is usually accomplished through development of appropriate Memoranda of Understanding (MOU) or Technical Arrangements (TA) detailing the functional, administrative, and resource-related implications of such relationships.

FUNDING / RESOURCES PROVISION

63. Nations are ultimately responsible for the deployment, sustainment and redeployment of their forces. National logistics capabilities are procured and maintained for that purpose at national expense, although multinational and collective arrangements should be taken into consideration by nations and the JFC.

64. The principles of the NATO Funding Policy (Reference P) provide the framework for funding eligibility for costs associated with AOM. Specific provisions are made in the context of individual OPLANs and Contingency Plans (COP), which are in turn supported by individual mission budgets.

65. The JFC should identify resource requirements and obtain the requisite funding authorizations in the context of the planning documents. In particular, requirements to support reconnaissance, initial deployment and HQ set-up should be defined and included in a package of enabling funding, which should be available at SACEUR Activation of Pre-deployment (ACTPRED).

66. Strategic infrastructure may be funded via the NATO Security Investment Program (NSIP) dependent upon the context of individual projects, while funding of the Operations and Maintenance (O&M) costs via the Military Budget (MB) should be taken into consideration through categorical budget allocations. The SCs must determine the MCR. Those that are considered as strategic infrastructure may be eligible for common funding. As common funding of O&M is restricted to the NATO HQs in the JOA, any common funded continuing activities are the responsibility of the NATO HQ.

67. Nations may decide to procure supplies and/or services under central arrangements, where it is cost effective to do so. Where such logistics support is procured in this manner, either by NATO or other nations, the entity consuming the supplies or services is to reimburse the providing entity in accordance with the provisions of the initial agreement.

CIVIL RESOURCES AND CAPABILITIES

68. Civil resources and capabilities may complement those of the military as military resources and capabilities may be used in civilian-led disaster relief, S&R or humanitarian assistance efforts. Civil equipment, goods and services can be utilised to provide timely and effective logistics support to any NATO or non-NATO-led operation. Support can only be based on civil resources and capabilities as long as they securely meet operational requirements of the assigned forces. To achieve better efficiency, including sharing and de-confliction, centralised procurement and control of civil resources and capabilities should be pursued.

69. Adequate contribution to NATO's CA requires that NATO's military and civilian staff coordinate with all IOs/NGOs as much as possible and have adequate visibility of these organisations capabilities and their willingness to co-operate with NATO. These organisations also require similar visibility over the capabilities NATO could contribute to a complex operation. NATO logistics planners need to be involved in the civil-military planning staff structures NATO normally establishes to achieve this cooperation.

70. Nations should have appropriate national legislation and other arrangements to facilitate the timely use of civil resources and capabilities in peace, crisis and conflict. This is especially important to facilitate the rapid deployment and timely sustainment of Allied forces.

71. When feasible, defence features exceeding what is needed for commercial use, should already be incorporated in the design and construction of civil assets and installations as appropriate and cost-effective, thus enabling them to meet the military requirements when they have to be used for military operations.

PART V - POLICIES FOR LOGISTICS FUNCTIONS

72. The following comprise the recognised logistics functions.

SUPPLY

73. The supply function of logistics encompasses timely provision of all classes of supply necessary to ensure the sustainability of forces. Nations need to provide through the NDPP and OPP, and the JFC needs to have through LIM, sufficient visibility and information of the stock levels for all classes of supply of assigned forces. In operations, supported by the JLSG, the nations are responsible for a steady flow of materiel, equipment, personnel etc. along the established LOCs. Where agreed with nations prior to and during the OPP, the JLSG can supply common user items (i.e. fuel, bulk water etc.) on a reimbursable basis. However, interoperability and visibility are crucial for an efficient supply function in a multinational environment and must be supported by all TCNs.

MATERIEL - LIFE CYCLE SUPPORT

74. The materiel function of logistics covers the full life cycle of materiel and will generally remain under national responsibility. However, multinational cooperation can enhance the efficiency and effectiveness of the support provided. All phases of the life cycle of materiel should be focused on optimized supportability and maximum interoperability. From an early stage all participants in the materiel management process must be made aware of, and take into account, the materiel support requirements, logistics capabilities and constraints within combined and joint AOM.

75. A NATO Life Cycle Support strategy should be used to provide equipment and materiel support that meets NATO and nations' operational requirements in the most efficient manner. Such a strategy integrates acquisition and consumer logistics processes into one seamless process. It must start early in the requirement phase to ensure the greatest impact on design and development to maximise weapon system availability at the most economical total cost.

EQUIPMENT MAINTENANCE

76. Maintenance is essential for the restoration of equipment in order to keep the force in a condition to carry out its AOM. NATO's Principles and Policies for the Maintenance of Equipment are covered in MC 0533 (Reference Q). Maintenance covers all means, including supply support, preventive or corrective actions, to retain and/or restore equipment to a serviceable condition. Maintenance is executed under the responsibility of the equipment owner.

77. Nations that are operating or plan to operate similar equipment can benefit from the opportunities provided by multinational logistics. As benefits are available at any stage in the equipment life cycle, they can be optimised if multinational logistics in support of equipment maintenance is considered early in the acquisition phase of the equipment. However, multinational and contractor maintenance solutions can also enhance efficiency and effectiveness in AOM and should be considered from the outset of the logistics OPP. Furthermore, groups of nations, which make multinational acquisition of the same equipment, should consider multinational basing in static and deployed AOM.

78. Collocation of maintenance capabilities can be used to facilitate technical assistance, enhance cooperation in performing maintenance tasks and reduce the equipment maintenance footprint.

MOVEMENT AND TRANSPORTATION

79. The ability to rapidly deploy, receive, sustain and redeploy Allied forces over strategic distances is essential for the success of AOM. This deployability requires movement of forces and supplies into, within, between and out of theatres. Based on lessons learned from AOM, strategic deployment and all issues related to the final redeployment should be well considered in planning and execution.

80. NATO and nations have a collective responsibility for M&T support. This responsibility extends from initial M&T planning through the Strategic Deployment (SD), Reception, Staging, Onward Movement and Integration (RSOI), Intra Theatre Airlift System (ITAS), sustainment, and redeployment phases of an operation. NATO commanders at the appropriate level are responsible for establishing the M&T requirements and for initiating, prioritising, co-ordinating, and de-conflicting movements. Nations are responsible for obtaining transportation resources and capabilities to deploy, sustain and redeploy their forces. NATO is responsible for the movement of NATO owned equipment and assets, including HQ elements, for AOM. NATO and nations should use the support of multinational M&T coordination centres to enhance efficiency and effectiveness of the scarce M&T resources and capabilities.

81. Organic military M&T resources and capabilities are limited. Therefore, civil M&T resources and capabilities such as airlift, sealift, and inland transportation assets may be needed to meet movement requirements. Nations should assure that access to civil and military transportation resources, capabilities and infrastructure is provided to meet required operation timelines. Nations are encouraged to make M&T resources, capabilities and surplus capacity available for cooperative or shared use to optimise their efficiency. Detailed principles and policies for movement and transportation are found in MC 0336/3 (Reference R).

RECEPTION, STAGING, ONWARD MOVEMENT AND INTEGRATION

82. RSOI is an operational matter¹⁴, that requires the provision of a significant degree of logistics support. Contrary to the three logistics dominated stages (RSOM), the operations dominated phase of Integration can occur anywhere along the RSOI process dependent on national requirements. Nevertheless, RSOI planning and execution requires considerable coordination with the operational intent, national considerations, logistics support, M&T and HNS planning. RSOI follows the SD and is the intra-theatre deployment phase of the overall deployment process that transitions units, personnel, equipment and material arriving in a secured Joint Operations Area (JOA), according to the Commander's Required Date (CRD), from the Ports of Debarkation (POD) to their Final Destination (FD) and conducts the synchronized transfer of operational ready units into a force that can be employed by the JFC.

83. Nations and NATO authorities have a collective responsibility for logistics support to NATO's RSOI operations. The JLSG Commander, on behalf of the JFC, in close coordination with the JFHQ-CJ4, HNs and TCNs, must develop the RSOI plan, which will consider logistics support, infrastructure and Force Protection (FP) requirements. Where the RSOI infrastructure is inadequate, NATO funding may be used to improve the infrastructure.

84. The JFC will consider the availability of HNS, which may provide infrastructure and services to facilitate RSOI. Where a HN authority does not exist or cannot provide the required RSOI support, the JFC will identify the capabilities required by the JLSG to undertake RSOI from assigned resources. In order to ensure that requirements are met, the JFC should seek logistics support units for RSOI support through the FGP, or request a nation or nations to assume responsibility as LLN on behalf of deploying Allied forces.

¹⁴ Detailed RSOI principles and procedures are addressed at operational doctrine level.

PETROLEUM OPERATIONS

85. The NATO Petroleum Supply Chain has to be able to respond to the full spectrum of AOM and to the deployment distances and dispersions envisaged, taking specifically into account increased cooperation between NATO and partner nations and their respective military and civil authorities. Financial considerations, economies of scale and the need for enhanced interoperability make it necessary to continuously seek new and innovative ways of delivering fuels support.

86. Guidance to NATO and national authorities on the principles, policies and characteristics of the NATO petroleum supply chain is provided in MC 0473/1, NATO Petroleum Supply Chain – Principles, Policies and Characteristics (Reference S).

SERVICES

87. Other logistics services will be required to support NATO forces. These may include manpower and skills provisioning, housing/accommodation, laundry and bath, canteen, mortuary affairs and other services like map distribution, postal and courier services and equipment recovery. Multinational and contractor support solutions can enhance efficiency and effectiveness and should be considered from the outset of the logistics OPP, in particular for smaller nations who cannot provide the full range of theatre support. Where agreed with TCNs prior to and during the OPP, the JLSG can coordinate common user services on a reimbursable basis.

CONTRACTOR SUPPORT TO OPERATIONS

88. Contractor Support to Operations (CSO) is the use of pre-planned and/or ad hoc commercial or agency contracting to perform selected logistics support services. It enables commercial entities or agencies to provide a portion of logistics support, so that such support is assured for NATO commanders and the TCNs, and optimises the use of military resources and capabilities. CSO is therefore a force-multiplier that can be particularly valuable during the sustainment phase of AOM. It permits nations to release military manpower and to establish less austere facilities for the duration of AOM. This is equally important during the redeployment phase, when economy is often a higher priority than speed. However, with CSO comes risks to reliability, quality, security and escalating costs, and these must be actively managed with the support of the Contract Integrator (CI), systematic risk assessment and management programmes and the application of the NATO Lessons Learned Policy¹⁵. The SCs should therefore apply CSO for the provision of logistics support to NATO deployed HQs and elements, for which delivery by military means is not essential. Additionally, the SCs and nations should seek to develop partnering arrangements with contractors in peacetime for use during AOM.

89. CSO is provided under national and/or NATO arrangements and may include rapidly usable contracts. However, in case of nationally arranged contracts, the nation(s) using such contracted support will manage and pay for goods and/or services consumed but should provide visibility concerning the contractual

¹⁵ For detail see Reference T

arrangements to NATO commanders. Where agreed by nations in advance, the JLSCG can arrange for CSO, in which case user nations and NATO HQ pay for the goods and services consumed. NATO's CSO arrangements will usually consist of, but are not limited to, Real Life Support (RLS) as well as M&T support for NATO HQ using NATO common funding.

90. The deployed JFC will establish a contract coordination capability to facilitate coordination of contracts and related issues with NATO HQ, TCNs and HNs. This function will be carried out by the JLSCG, supported by a CI, and possibly includes the use of other services from the NATO Support Organisation (NSPO). Details are provided in the NATO Policy on Contractor Support to Operations (Reference G).

HOST-NATION SUPPORT

91. If available, HNS can provide the JFC and TCNs with logistics and other support in accordance with negotiated arrangements between NATO and/or TCNs and the HN government. HNS may reduce the amount of logistics capabilities and materiel required to deploy, receive, sustain and redeploy forces that otherwise must be provided by TCNs. The desire to reduce the logistics footprint and maximise operational effectiveness requires a coordinated approach towards HNS planning and execution, managed by the JLSCG, when deployed.

92. The NATO HNS concept provides a framework to enable NATO's forces to deploy and be sustained through the provision of timely and effective support. This support is dependent upon cooperation and coordination between NATO and HN national authorities, the establishment of HNS arrangements based upon the best use of available HN resources and the consideration of HNS from the start of the operational planning process.

93. The SCs will engage with non-NATO nations that are formally recognised by the NAC as potential operational partners¹⁶ on the necessary HNS arrangements in accordance with NATO's Operational Planning Process¹⁷.

94. Reimbursement for HNS, through either national, multinational or common funding, will be agreed between the HNs and the TCNs and/or NATO authorities as appropriate. Specific principles and policies for HNS planning and execution are covered in MC 0334/2 (Reference V).

MEDICAL SUPPORT¹⁸

95. Some medical support functions are more related to logistics, others are typically more health related and comprise a variety of different tasks including Force Health Protection and Medical Intelligence. The primary purpose of medical support is to preserve and restore the health and fighting strength of forces and individuals. Healthcare, including medical support and several medical logistics functions, are

¹⁶ PO(2011)0141, Political Military Framework for Partner Involvement in NATO-led Operations

¹⁷ MC 0133/4 (Final), NATO's Operations Planning (Reference N)

¹⁸ This chapter on medical support is not describing NATO medical support principles and policy. Therefore, for detailed and comprehensive information on medical support, readers are referred to Reference J.

governed by a framework of national and international law as well as ethical and humanitarian conventions. Detailed medical support principles and policies are covered in MC 0326/3 (Reference J).

96. NATO and nations have a collective responsibility for the health of their troops and thus for medical support. The responsibility for obtaining medical support resources and capabilities, as well as for planning and controlling the medical support of national forces and national components of multinational forces, rests with each nation. This principle must be tempered by the need for cooperation, coordination and economy, and may include cooperative arrangements initiated by NATO commanders. NATO is affected by long-standing shortfalls in deployable medical capability. Mitigation will involve a number of complementary approaches, including potentially contracting commercial capability, for example to free-up national military capability for deployment. Nations will determine their own approach, but may wish to make use of framework agreements developed in consultation with NATO. NATO could also serve to facilitate engagement with industry on behalf of its members. Irrespective of the approach taken, the generation of effective, efficient, deployable and sustainable medical capability will remain the overriding requirement.

97. The medical support to Allied forces must be capable of maintaining the necessary quality and quantity of medical services and evacuation activities during peace, crisis, and conflict. It must be at or above the readiness and deployability level of the forces it supports. This requires having the appropriate medical C2, equipment, supplies, and evacuation capacity on hand or in reserve, as well as having the ability to resupply and to replace medical personnel on a continuous basis.

PART VI - LOGISTICS RELATED POLICIES

MILITARY ENGINEERING SUPPORT TO LOGISTICS

98. Military Engineering (MILENG) provides NATO commanders with the means to use terrain in a manner that best meets campaign objectives by applying a range of skills such as field, construction, environmental and geospatial engineering and is covered in MC 0560/1 (Reference W). In applying these skills, all joint functions at all levels of AOM are supported. Particular areas of expertise in support to logistics, which used to be called Infrastructure Engineering for Logistics (Reference X), are now considered to be part of MILENG as well as Environmental Protection (EP) and infrastructure development. MILENG is a multi-faceted force multiplier and an essential physical enabler¹⁹, throughout all stages of AOM and particularly when conducting tasks associated with RSOI and sustaining the Allied Forces.

99. The range of MILENG support available within a theatre will depend on the mission type, the terrain and the allocated resources and capabilities. At any given stage of an operation the JFC may shift the main effort of MILENG support entirely to logistics, and may allocate capabilities normally seen supporting the manoeuvre

¹⁹ Military Engineering does not encompass the activities undertaken by those 'engineers' who maintain, repair and operate vehicles, vessels, aircraft, weapon systems and equipment.

to infrastructure development and sustainment, enhancement of freedom of movement or the provision of real life support. To enable NATO commanders to maximize the effectiveness of their assigned MILENG capabilities and resources, the availability of senior engineer expertise is necessary at all HQ levels. The Joint Force Engineer and staff are the focal point for the planning and execution of all aspects of MILENG within the JOA. The Senior Joint Engineers of the subordinated commands (including the JLSG) are responsible for the prioritisation and coordination of the MILENG support within their areas of responsibility. To ensure that consideration of MILENG capabilities and forces is adequately addressed in the NDPP, defence planners and MILENG experts at the SC level must work closely with both NATO HQ staff and senior engineers in national HQ.

100. EP, as part of the MILENG functional area, is the integration and application of environmental considerations to prevent or mitigate environmental impacts resulting from military activities. The MILENG staff provides EP policy, direction, guidance and advice. NATO EP policy (Reference Y) states that NATO forces should be committed to taking all reasonably achievable measures to protect the environment. While NATO and nations have a collective responsibility to this commitment, each nation bears ultimate responsibility for the actions of its forces. Early integration of EP factors and considerations into logistics planning will minimize any potential negative environmental impacts (e.g. costly remediation, detrimental health effects on soldiers) and maximize its positive impacts (e.g. reduced energy consumption and the commensurate logistics effort to sustain fuel requirements).

NATO STANDARDIZATION AND INTEROPERABILITY

101. Standardization is a key tool for achieving interoperability (Reference Z). Interoperability is essential for logistics cooperation and has a direct impact on AOM sustainability and overall effectiveness of NATO forces. The minimum requirements for interoperability are commonality of concepts, doctrines and procedures, compatibility of equipment, and inter-changeability of material and supplies. Civilian standards should be used whenever possible. Nations should strive to adopt the agreed NATO standards and to implement the Standardization Agreements (STANAGs).

CIVIL-MILITARY COOPERATION

102. Civil-Military Cooperation (CIMIC) is the interaction between the NATO commanders and all parts of the civilian environment within the JOA (Reference AA). As such, CIMIC facilitates access to civil resources and capabilities between the force and civil actors, for example facilitating the negotiations for HNS and contracting.

PART VII - IMPLEMENTATION

103. The Logistics Committee is charged with the development, review and implementation of NATO's logistics policy.

104. Effective logistics support of forces is fundamental for the success of AOM. The application of the principles and policies, as set out in this document, is of the utmost importance for the attainment of this objective and should proceed in harmony with the implementation of the Alliance's strategic concept. The SCs are to incorporate these principles and policies in their doctrines, directives and procedures in agreement with nations. Nations are encouraged to adapt their concepts, structures and procedures accordingly.

105. Upon NAC approval, this document will supersede:

LEXICON

ALLIED JOINT OPERATION

An operation carried out by forces of two or more NATO nations, in which elements of more than one service participate. (NATO agreed)

CIVIL-MILITARY COOPERATION (CIMIC)

The coordination and cooperation, in support of the mission, between the NATO Commander and civil actors, including the national population and local authorities, as well as international, national and non-governmental organizations and agencies. (NATO agreed)

COLLECTIVE LOGISTICS

The collective approach, undertaken by NATO and nations to plan, generate, synchronize and prioritize national and NATO logistics capabilities, resources and activities, to deliver logistics support to NATO missions, operations and exercises by making use of common processes and organizational structures. (LC agreed – NATO agreement pending)

COLLECTIVE RESPONSIBILITY FOR LOGISTICS

The set of NATO's and nations' individual and largely complementary obligations to cooperatively organise and deliver the overall logistics support of NATO operations, taking into account one another's requirements and constraints. (LC agreed – NATO agreement pending)

COMBAT SERVICE SUPPORT (CSS)

The support provided to combat forces, primarily in the fields of administration and logistics. (NATO agreed)

COMBINED / MULTINATIONAL

Adjective used to describe activities, operations and organisations, in which elements of more than one nation participate. (NATO agreed)

COMBINED JOINT OPERATION

An operation carried out by forces of two or more nations, in which elements of at least two services participate. (NATO agreed)

COMMAND (1., 2., 3.) / COMMANDEMENT (4.) / COMMANDER (4., 5.)

1. The authority vested in an individual of the armed forces for the direction, co-ordination, and control of military forces.
2. An order given by a commander; that is, the will of the commander expressed for the purpose of bringing about a particular action.
3. A unit, group of units, organisation, or area under the authority of a single individual.
4. To dominate an area or situation.
5. To exercise command. (NATO agreed)

COMMONALITY

The state achieved when the same doctrine, procedures or equipment are used.
(NATO agreed)

COMPATIBILITY

The suitability of products, processes or services for use together under specific conditions to fulfil relevant requirements without causing unacceptable interactions.
(NATO agreed)

CONTRACT INTEGRATOR (CI)

A profit or non-profit agency or organisation employed by NATO and / or nations to plan and coordinate an integrated contractor support to operations within a defined scope/ project. (LC agreed - NATO agreement pending)

CONTRACTOR SUPPORT TO OPERATIONS (CSO)

Enables competent commercial entities to provide a portion of deployed support, so that such support is assured for the commander and optimises the most efficient and effective use of resources. (LC agreed – NATO agreement pending)

COORDINATING AUTHORITY

The authority granted to a commander or individual assigned responsibility for coordinating specific functions or activities involving forces of two or more countries or commands, or two or more services or two or more forces of the same service. He has the authority to require consultation between the agencies involved or their representatives, but does not have the authority to compel agreement. In case of disagreement between the agencies involved, he should attempt to obtain essential agreement by discussion. In the event he is unable to obtain essential agreement he shall refer the matter to the appropriate authority. (NATO agreed)

DEPLOYMENT (1., 2., 3.) / REDEPLOYMENT (4.)

1. In naval usage, the change from a cruising approach or contact disposition to a disposition for battle.
2. The movement of forces within areas of operations.
3. The positioning of forces into a formation for battle.
4. The relocation of forces to desired areas of operations. (NATO agreed)

HOST-NATION (HN)

A nation which, by agreement:

- a. receives forces and materiel of NATO or other nations operating on/from or transiting through its territory;
- b. allows materiel and/or NATO organisations to be located on its territory; and/or
- c. provides support for these purposes. (NATO agreed)

HOST-NATION SUPPORT (HNS)

Civil and military assistance rendered in peace, crisis or war by a host-nation to NATO and/or other forces and NATO organisations which are located on, operating on/from, or in transit through the host-nation's territory. (NATO agreed)

INFRASTRUCTURE

In NATO, the static buildings, facilities and other permanent installations required to support military capabilities. (NATO agreed)

INTERCHANGEABILITY

The ability of one product, process or service to be used in place of another to fulfil the same requirements. (NATO agreed)

INTEROPERABILITY

The ability to act together coherently, effectively and efficiently to achieve Allied tactical, operational and strategic objectives. (NATO agreed)

JOINT

Adjective used to describe activities, operations and organisations in which elements of at least two services participate. (NATO agreed)

JOINT OPERATIONS AREA (JOA)

A temporary area defined by the Supreme Allied Commander Europe, in which a designated joint commander plans and executes a specific mission at the operational level of war. A joint operations area and its defining parameters, such as time, scope of the mission and geographical area, are contingency- or mission-specific and are normally associated with combined joint task force operations. (NATO agreed)

JOINT LOGISTICS SUPPORT GROUP (JLSG)

A logistics unit consisting of a permanent headquarters nucleus, augmented by additional staff as required for specific operations, to form a deployable joint logistics support group headquarters that plans and coordinates theatre-level multinational logistics support as tasked and directed by the Joint Force Commander. With assigned logistics enablers (i.e. national logistics units, host-nation support and/or commercial capabilities) the deployable joint logistics support group headquarters executes theatre-level multinational logistics support for Alliance Operations and Missions as tasked and directed by the Joint Force Commander.
(LC and NATO agreement pending)

LOGISTICS

The science of planning and carrying out the movement and maintenance of forces. In its most comprehensive sense, the aspects of military operations which deal with:

- a. design and development, acquisition, storage, movement, distribution, maintenance, evacuation, and disposal of materiel;
- b. transport of personnel;
- c. acquisition or construction, maintenance, operation, and disposition of facilities;
- d. acquisition or furnishing of services; and
- e. medical and health service support. (NATO agreed)

LOGISTICS CONTROL (LOGCON)

The authority granted to a NATO commander over assigned logistics units and organizations in the joint operations area, including national support elements, that empowers him to synchronize, prioritize, and integrate their logistics functions and activities to accomplish the joint theatre mission.

Note: Logistics control does not confer authority over the nationally-owned resources held by a national support element, except as agreed in the transfer of authority or in accordance with the NATO principles and policies for logistics. (LC and MC agreed – NATO agreement pending)

LOGISTICS INFORMATION MANAGEMENT (LIM)

A discipline that directs and supports the handling of logistics information (knowledge such as facts, data or opinions) throughout its life-cycle, ensuring it becomes the right information in the right form and of adequate quality to satisfy the demands of an organisation. (LC agreed – NATO agreement pending)

LOGISTICS LEAD NATION (LLN)

A nation that assumes overall responsibility for organizing and coordinating an agreed broad spectrum of logistics support for all or part of a multinational force, including headquarters, within a defined geographical area for a defined period. (LC agreed - NATO agreement pending)

LOGISTICS RESOURCES

The units, personnel, equipment, stocks, financial resources, information and other capabilities to deploy, sustain and redeploy forces over time. (LC and MC agreed – NATO agreement pending)

LOGISTICS ROLE SPECIALISATION NATION (LRSN)

A nation that assumes the responsibility for providing or procuring a specific logistics capability and/or service for all or part of the multinational force within a defined geographical area for a defined period. (LC agreed - NATO agreement pending)

LOGISTICS SUSTAINMENT

The process and mechanism by which sustainability is achieved and which consists of supplying a force with consumables and replacing combat losses and non-combat attrition of equipment in order to maintain the force's combat power for the duration required to meet its objectives. (NATO agreed)

MAINTENANCE

1. All actions taken to retain equipment in or to restore it to specified conditions until the end of its use, including inspection, testing, servicing, modification(s), classification as to serviceability, repair, recovery, rebuilding, reclamation salvage and cannibalization.
2. All supply and repair action taken to keep a force in condition to carry out its mission.

3. The routine recurring work required to keep a facility (plant, building, structure, ground facility, utility system, or other real property) in such condition that it may be continuously utilized, at its original or designed capacity and efficiency, for its intended purpose. (NATO agreed)

MOBILITY

A quality or capability of military forces which permits them to move from place to place while retaining the ability to fulfil their primary mission. (NATO agreed)

MOVEMENT

The activity involved in the change in location of forces, equipment, personnel and stocks as part of a military operation. Movement requires the supporting capabilities of mobility, transportation, infrastructure, movement control and support functions. (LC and MC agreed – NATO agreement pending)

MOVEMENT CONTROL

1. The planning, routing, scheduling and control of personnel and cargo movements over lines of communication.
2. An organisation responsible for the planning, routing, scheduling and control of personnel and cargo movements over lines of communication. (NATO agreed)

MULTINATIONAL FORCES

Forces of more than one nation under a NATO Commander or non-NATO Commander within a NATO-led operation. (LC and MC agreed – NATO agreement pending)

MULTINATIONAL INTEGRATED LOGISTICS UNIT (MILU)

A Unit formed by two or more Nations which agree, under the operational control of a force commander at joint force or component level, to provide logistics support to a multinational force. (LC and MC agreed – NATO agreement pending)

MUTUAL SUPPORT AGREEMENT/ARRANGEMENT (MSA)

An agreement/arrangement, based on the NATO standard procedures for mutual logistics assistance, ensuring that nations involved in a NATO operation can provide logistics support to one another without the need to negotiate bi-lateral agreements/arrangements with all other troop-contributing nations.

The two principles of mutual support are:

1. That no person or equipment belonging to a troop-contributing nation within a NATO led force shall be denied support from other troop-contributing nations, provided that the support is available and can be provided without unacceptable operational risk to the donor.
2. That any troop-contributing nation whose personnel and equipment receive support from another nation shall make restitution, in cash or in kind, for the goods or services that they receive. (LC and MC agreed – NATO agreement pending)

NATIONAL LOGISTICS SUPPORT

A nation takes full responsibility for procuring and providing logistics support to her forces, without reference to the assistance from other nations. (LC and MC agreed – NATO agreement pending)

NATO COMMANDER

A military commander in the NATO chain of command. (NATO agreed)

NATO CLASSES OF SUPPLY

Class I Food and water
Class II Materiel
Class III Petroleum Oils & Lubricants (POL)
Class IV Construction Materiel
Class V Ammunition
(LC and MC agreed – NATO agreement pending)

NON-NATO COMMANDER

A military commander of a non-NATO nation who participates, within the chain of command, in a NATO-led operation or in an operation where NATO capabilities are used. (LC and MC agreed – NATO agreement pending)

OPERATIONAL COMMAND (OPCOM)

The authority granted to a commander to assign missions or tasks to subordinate commanders, to deploy units, to reassign forces, and to retain or delegate operational and/or tactical control as the commander deems necessary. It does not include responsibility for administration. (NATO agreed)

OPERATIONAL CONTROL (OPCON)

The authority delegated to a commander to direct forces assigned so that the commander may accomplish specific missions or tasks which are usually limited by function, time or location; to deploy units concerned, and to retain or assign tactical control of those units. It does not include authority to assign separate employment of components of the units concerned. Neither does it, of itself, include administrative or logistics control. (NATO agreed)

OPERATIONAL MOBILITY

The capability to move forces and their associated logistics support in a timely and effective manner within a region (intra-regional). (LC and MC agreed – NATO agreement pending)

PETROLEUM, OILS AND LUBRICANTS (POL)

A broad term which includes all petroleum and associated products used by the armed forces. (NATO agreed)

POLICY

Prudent course of action or conduct to be applied in the application of a principle.
(LC and MC agreed – NATO agreement pending)

PRINCIPLE

A general law that gives action; a fundamental truth as the basis of reasoning.
(LC and MC agreed – NATO agreement pending)

READINESS TIME

The time within which a unit can be made ready to perform the tasks for which it has been organized, equipped and trained. This time is amplified or measured by indicators of the unit's current personnel, materiel and training state. It does not include transit time. (NATO agreed)

**RECEPTION, STAGING, ONWARD MOVEMENT AND INTEGRATION
(RSOMI/RSOI)**

The intra-theatre deployment phase of the deployment process that transitions units, personnel, equipment and materiel arriving in a secured Joint Operations Area (JOA), according to the Commander's Required Date (CRD), from Ports Of Debarkation (POD) to their Final Destination (FD) and conducts the synchronised transfer of operational ready units into a force that can be employed by the Joint Force Commander (JFC). (LC and NATO agreement pending)

RECEPTION, STAGING AND ONWARD MOVEMENT (RSOM)

The intra-theatre deployment phase of the deployment process that transitions units, personnel, equipment and materiel arriving in a secured Joint Operations Area (JOA), according to the Commander's Required Date (CRD), from Ports of Debarkation (POD) to their Final Destination (FD).

(LC and MC agreed - NATO agreement pending)

REDISTRIBUTION

The transfer of logistics resources from one formation to another, in accordance with agreed terms and conditions. (LC and MC agreed – NATO agreement pending)

REDISTRIBUTION AUTHORITY

The authority given to a NATO Commander to redistribute certain logistics resources. (LC and MC agreed – NATO agreement pending)

RESUPPLY

The act of replenishing stocks in order to maintain required levels of supply.
(NATO agreed)

SENDING NATION (SN)

A nation deploying its forces, supplies and/or national components of multinational forces and requesting the use of host-nation logistics and other support during transit through or employment on the host-nation's territory. (LC and MC agreed - NATO agreement pending)

STANDARDIZATION

The development and implementation of concepts, doctrines, procedures and designs to achieve and maintain the compatibility, inter-changeability or commonality which are necessary to attain the required level of interoperability, or to optimise the use of resources, in the fields of operations, materiel and administration. (NATO agreed)

STRATEGIC MOBILITY

The capability to move forces and their associated logistics support in a timely and effective manner over long distances. This could be between joint operations areas (inter-JOA), between regions (inter-regional), or beyond NATO's area of responsibility. (LC and MC agreed – NATO agreement pending)

SUSTAINABILITY

The ability of a force to maintain the necessary level of combat power for the duration required to achieve its objectives. (NATO agreed)

THEATRE

The joint operation area and the adjacent geographical area in which a military operation or support functions are being conducted. (LC and MC agreed – NATO agreement pending)

TRANSFER OF AUTHORITY (TOA)

Within NATO, an action by which a member nation or NATO Command gives operational command or control of designated forces to a NATO Command. (NATO agreed)

TRANSPORTATION

The physical movement of people, goods, equipment and materiel from one place to another.

Note: Equipment transported may include the requisite materials handling equipment. (LC and MC agreed – NATO agreement pending)
