CHAPTER 1**OPERATION OF FORCE AND GROUP NAVAL
LOGISTICS IN THEATRE
(FLC/GLC)****0101. Introduction**

1. The role of the Force Logistics Co-ordinator (FLC) or Group Logistics Co-ordinator (GLC) is key to the sustainment of a Multinational Maritime Force (MNMF) and the liaison between the FLC/GLC and the other staff disciplines within the MNMF Commander's staff is vital if operations are to be successful. The FLC/GLC will use the assets provided to him from the Force Generation Process but it will be for him to employ each asset to the best effect. These SOPs are not designed to give all solutions to the challenges that FLCs/GLCs are likely to face but are there to provide general guidance and starting points for the wide variety of subject in which he will be involved.

2. The Task Group Commander (CTG) is responsible for employing his Group in theatre. OPCOM of national logistic assets is held by the appropriate Joint Force Commander (North or South), and OPCON will usually be delegated to the Joint Force Commander/Component Commander/Multinational Maritime Force Commander (MNMF CDR)/CTG as appropriate. The Force or Group Logistics Co-ordinator (FLC/GLC) on the MNMF CDR's/CTG staff is responsible to the MNMF CDR's/CTG for all logistic assets within his Force or Group. Specifically, the FLC/GLC should monitor requirements, identify shortfalls, and then develop and execute a co-ordinated plan to provide the logistics required to support the operation.

3. It should also be recognised that the FLC/GLC task may be further complicated by the dispersed nature of the maritime forces in the operational area. Indeed when an FLC is nominated to support a MNMF it could be that the staff is based ashore with the force being supported by GLCs from within each Task Group that make up the overall Task Force. When these factors are added to the 'normal' challenges the FLC/GLCs face then it may be seen that understanding of their role and close co-operation is necessary to meet the operational requirement.

0102. FLC/GLC Methodology

The success of operational logistics at sea depends on planning, strong liaisons with the warfare staff, and adjacent/multinational and superior authorities, good communications and a deep knowledge of the possible. The FLC/GLC must constantly monitor the tactical situation, anticipate logistics support requirements and promulgate the appropriate directives. In crisis and war, there will be minimal time to respond to significant, simultaneous needs. EMCON conditions and other reductions in communications availability will dictate a need for forward planning, and imaginative use of alternative methods of communication to alter the basic plan at short notice. Constant liaison with the warfare staff is essential to ensure that the logistic plan makes tactical sense, and similarly that the tactical plan makes logistic sense. To accomplish his task, the FLC/GLC must:

- a. Fully understand his area of responsibility and adjacent areas, taking into consideration reliability of resupply, facilities available, procedures required, and alternatives to primary resources.

- b. Project requirements for the first thirty (or as directed) days of conflict based on best estimate of the tactical situation and predicted usage rates.
- c. Plan the movement of resources needed to accomplish replenishment, modifying actual transfers to meet the tactical requirement.
- d. Continually measure and update his logistic objectives to quantify the service and its level of effectiveness.
- e. Fully appreciate the operational implications of logistics requirements and problems.

0103. Tasks of the Force/Group Logistics Co-ordinator

The FLC/GLC is the staff officer responsible to the MNMF CDR/CTG for the pro-active management and movement of logistics, provision of support services (including medical), replenishment from external sources, and the maintenance of the TF or TG at the highest state of logistic readiness. The full responsibilities of the FLC and GLC are set out in ALP 4.1 Article 0203 and 205 but have been reproduced at Annex A and Annex B for ease of reference. In general terms, the FLC/GLC tasks cover:

a. Principal Tasks.

- (1) To monitor and ensure the sustainability of the designated Maritime Task Force/Group through liaison and interaction with National/NATO/International logistical agencies.
- (2) To co-ordinate all logistics matters within the assigned Task Force or Task Group, including medical, repair and salvage.
- (3) To establish a comprehensive logistic reporting system.

b. Secondary Tasks.

- (1) To ensure that full and accurate logistic information is available on a 24-hour basis. This should cover:
 - (a) Critical OPSTAT DEFECT reports
 - (b) TF/TG sustainability.
 - (c) Planned and recently achieved replenishment programme, including PMC.
 - (d) TF/TG aircraft states.
 - (e) Supply chain processing information.
 - (f) Medical issues.
 - (g) Repair and salvage issues.
- (2) To prepare the logistic aspects of MNMF Cdr/CTG briefs which is to include:
 - (a) TF/TG sustainability.

- (b) TF/TG material state (including aircraft states and repair status).
 - (c) TF/TG medical state.
 - (d) Other logistic information as required.
- (3) To collate information from LOGSITREPs, OPSTAT DEFECTs, LOGASSESSREPs and other logistic signals (VOD requests, Aircraft Status etc.) and release LOGASSESSREPs, JPERSREPs and MEDASSESSREPs as required.
- (4) To liaise with the MJLC/MNLC(M)/NSE and with Forward Logistic Sites (FLS) and Advanced Logistic Support Sites (ALSS) to ensure that all items in theatre requiring onward movement are expediently and correctly transferred to the appropriate unit.
- (5) To monitor requirements for Replenishment at Sea (RAS(A)/(S)/(L)) for all assigned Task Groups, including the requirement for consolidation.
- (6) To attend all staff planning meetings in the Battle Rhythm, to ensure that logistics factors are fully considered.

0104. For ease of reference a set of generic Terms of Reference are included at Annex 1A.

0105. FLC/GLC Staff.

While the size of staff will vary according to the intensity of an operation, a typical GLC staff, together with their responsibilities, is shown at Chapter 2 of ALP 4.1. Whatever the size of staff, all logistic elements must be covered.

0106. FLC/GLC Liaisons and Higher Authorities.

While the detail must remain flexible, in general terms the GLC must still report to the FLC, and the FLC to the Commander, but FLC/GLC should also liaise with other relevant FLCs/GLCs, and with shore authorities where HNS is appropriate. The FLC/GLC must also liaise closely with Multinational Logistic Commanders (particularly the MNLC(M) when one is established to provide shore support to the MNMF), the MJLC and FLS/ALSS Commanders or Co-ordinators.

0107. Force or Group Logistics Planning and Execution - FLC/GLCs Instructions to The Force/Group.

From the Mounting HQ OPORDER, the FLC/GLC will develop more detailed logistic intentions and reporting instructions to cover his Force/Group, which he will signal in an OPTASK LOG FLC/GLC, together with an OPTASK RAS, to all units in his TF/TG (examples in ALP 4.1 Chapter 4). He may also produce an OPORDER/Support Instruction. To avoid confusion, where possible, it is advisable to liaise with the Mounting HQ before these are released.

0108. Delegation of Duties.

The OPTASK LOG should identify the breakdown of various logistic duties. Often the recipient of such tasks will be the CTF/CTG or the Flagship itself, but sometimes it might be necessary to delegate duties (other than those of the FLC/GLC) outside the Flagship:

- a. Force Logistics Co-ordinator (FLC).
- b. Group Logistics Co-ordinator (GLC).

- c. Local Air Logistics Co-ordinator (LALC).
- d. Material Control Officer (MCO/MATCONOFF).
- e. Underway Replenishment Co-ordinator (URC).
- f. Repair Co-ordinator (RC).
- g. Medical Co-ordinator (Med Co-ord).

0109. Advanced Logistic Support Site/Forward Logistic Site

a. Prior to deploying into theatre the FLC/GLC will have agreed with the relevant HQ the options for sustaining the Force from ashore. Where appropriate one or more Forward Logistic Sites (FLS) will be established. The location, size and facilities available at an FLS will vary depending on the operational requirements (they may range from a small contingent operating from a commercial airport, to a large watchkeeping organisation with integral logistic helicopters/delivery boats). In the largest operation one or more Advanced Logistic Support Sites will be established through which all support into theatre will pass. For further detail of the role and C2 of ALSS/FLSs see Chapter 3 of ALP4.1

b. The FLS will be under the command of the MNLC(M) unless one is not established – in which case logistics reporting from shore based support will be direct to the FLC. It may be concluded that careful co-ordination of effort and information flow between the FLC, GLC(s), MNLC(M), ALSS and FLSs is vital if shore support to the maritime force is to be optimised and efficient.

c. ALP 4.1 Supp 1 contains the TORs and aides memoire for establishing and running of a FLS and ALSS.

0110. FLC/GLC Planning and Execution Check Off Lists.

These are at Annexes C and I and include the need to:

- a. Establish a logistic plan at Force/Group level, within the parameters of the Commander's Directive, to suit the composition of the Force/Group, within the projected tactical plan.
- b. Draft the logistic section of the OPGEN.
- c. Establish and constantly nurture relevant national and multinational logistic contacts ashore and afloat.
- d. Determine the whole range of available logistic assets and their capabilities.
- e. Establish and signal specific instructions for the Force/Group concerning POL, ammunition, food, stores replenishments, MATCONOFF, OPSTAT Defects/maintenance and repair, medical/casualties and evacuation, mail, HDS, use of particular airheads and passenger movement.
- f. Establish liaison with various logistic points, including GLCs and other FLCs (if established), the MNLC(M), the ALSS and the FLSs.
- g. Establish reporting procedures at Force/Group level.

h. Monitor and constantly reassess logistic plans to suit the tactical environment and overall aim. Plan ahead for a possible escalation in both width and intensity of operation, or loss and attrition of logistic assets.

i. Reassess and co-ordinate resupply with the MNLC(M).

0111. Setting of Tripwires by the FLC/GLC

a. It is essential for Task Group units to inform the FLC/GLC immediately if stocks of fuels, ammunition or provisions fall to a level that compromises the unit's sustainability. The FLC/GLC is responsible for the setting of levels at which Tripwire Reports, in the form of an immediate LOGSITREP reporting only that item which has hit its tripwire level, should be submitted by Task Group units.

b. The tripwire concept is based upon a unit's 'no go barrier' which, for F76 Dieso fuel, may be determined by either damage control or stability considerations. This fuel tripwire level should be set at 2 days consumption (at predicted rates) above the 'no go barrier', this allows approximately 12 hours for the signalled Tripwire Report to be distributed to the FLC/GLC and allows a further 36 hours for him to plan and execute an appropriate replenishment serial. The prudent FLC/GLC should add a further 2 days consumption as an internal replenishment planning aid (see Fig 1.1) when seeking to avoid the need for units to render a Tripwire Report; it will also act as a measure of efficacy of the RAS programming.

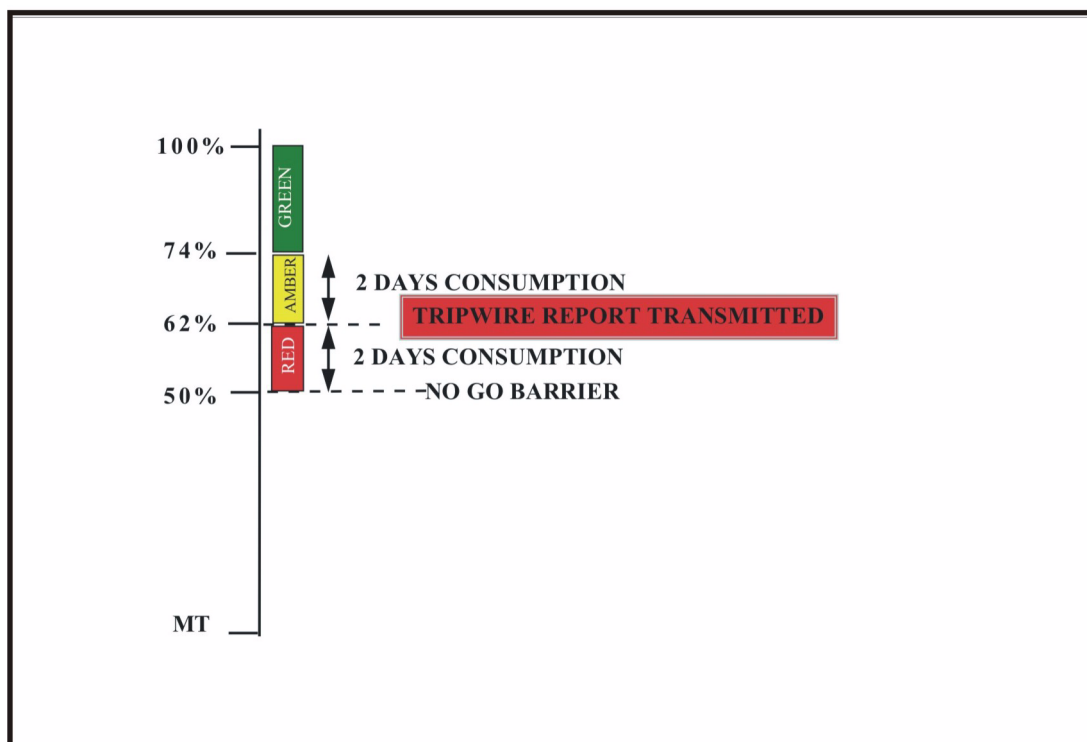

Figure 1-1. Tripwire Setting Based on a No Go %age of 50% F76

c. Application of the tripwire concept when combined with the traffic light colour coding system shown in Figs 1-1 and 1-2 provides an efficient briefing tool for the FLC/GLC. The use of this system enables him to brief the CTF/CTG by exception only on the sustainability concerns of units within 2 days of reaching their tripwire as shown in Fig 1-2. Other units of the force/group which are said to be 'in the green' (ie more than 96 hours away from their no go %age level at predicted consumption rates) should not, under normal circumstances, be a cause of logistic concern and will not require a briefing note.

DIESO(F76) at 180700Z					
		Remains	Days to Tripwire	Next RAS	Days in hand
AMBER	HMS SUSTAINED	90%	1	19th	-
	HMS CAPABLE	80%	1	19th	-
	HMS EFFICIENT	73%	-	19th	-
RED					

CTG 123.04

Figure 1-2. Briefing Slide for Command Evening Brief

d. The setting of tripwires is to be done by the FLC/GLC and these tripwires are promulgated via the OPTASK LOG FLC/GLC. If a unit hits the tripwire level this is to be reported by immediate message using the LOGSITREP format. On this type of occasion, only the LOGSITREP format may be amended to contain just the specific item concerned.

e. The setting of tripwire levels for F44 AVCAT, munitions and food will be done in consultation between the GLC and Staff Operations Officer (SOO). This will take into account threat assessment in the theatre of operations, the unit's tasking within the force/group and the estimated time to resupply. This will most likely result in the use of arbitrary, definitive percentages rather than variable and varying predicted rates of consumption, as is the case with F76 Dieso.

0112. Logistic Reporting

During an operation, logistic reporting is fundamental to the control of logistic assets at all levels. The overall reporting system is at Chapter 4 of ALP 4.1, which includes the relevant formats, and should be read carefully; but in brief:

a. LOGSITREP. Prior to joining a Task Group, units are to report accurately their logistic situation and status (including all significant defects) by using the LOGSITREP as directed in the OPTASK LOG FLC/GLC. Units should thereafter signal a daily LOGSITREP, at a time set out in the OPTASK LOG FLC/GLC. For daily LOGSITREPs it may be decided that only changes to previously reported information should be included (the exact requirement will be set out in the OPTASK LOG FLC/GLC). Where reporting is likely to cover an extended period, there may be a requirement for regular full LOGSITREPs to allow the FLC/GLC to have the required level of detail - these occasions will, once again, be promulgated in the OPTASK LOG FLC/GLC.

b. LOGASSESSREPs. From the LOGSITREPs received, the CTG should render a consolidated Group report, a LOGASSESSREP, daily to the MNMF CDR as directed in the OPTASK LOG FLC. The FLC will further consolidate the LOGASSESSREPs submitted by the GLCs, sending a daily LOGASSESSREP to the Mounting HQ, which assesses the overall logistic sustainability of the force. In small operations, this report usually forms part of the CTF's overall ASSESSREP.

c. Medical. The MNMF is required to make daily medical sitreps to the CJTF. The following reports will be required:

(1) MEDSITREP. To inform the CJTF of the medical and health services situation.

d. Maintenance and Damage.

(1) OPSTAT DEFECT (APP 11 Art 0502.8). To inform the chain of command of restrictions on operational capability of a unit, and the unit's intentions for repair.

(2) OPSTAT DAMAGE (APP 11 Art 0502.8). To inform the CTG and chain of command of damage and casualties sustained.

INTENTIONALLY BLANK

ANNEX 1A

TERMS OF REFERENCE FOR THE FORCE LOGISTICS CO-ORDINATOR

A101. Purposes

1. **Primary Purpose.** FLC is the principal advisor to the MNMF CDR on afloat logistics matters

A102. Superiors

2. **Accountability.** FLC is accountable to the MNMF CDR for all logistics matters of the maritime force.

3. **Authority.** FLC is authorised to:

- a. Recommend force logistics policies and guidance to the MNMF CDR, then execute those policies and guidance on the MNMF CDR's behalf.
- b. Co-ordinate and monitor all logistic support to the MNMF.
- c. Liase directly with the MNLC(M) for required shore-based logistic support, and when authorised by the Supported Commander, liase with the ALSS or FLS Commander for co-ordination of specific shore-based logistic evolutions.
- d. Co-ordinate and monitor the activities of the Group Logistic Co-ordinators (GLCs).

4. **Responsibilities.** The principal responsibilities of the FLC are:

- a. Promulgate the OPTASK LOG FLC and OPTASK RAS; submit daily LOGASSESSREP on behalf of the MNMF CDR.
- b. Assist the MNMF CDR in logistic planning, ensuring that it supports MNMF operation.
- c. Monitor task force logistic readiness and sustainability and advise the MNMF CDR.
- d. Co-ordinate with the Medical Advisor for handling and evacuation of CASEVACs or MEDEVACs.
- e. Plan and co-ordinate UNREPs, rendezvous times and positions, and frequencies for the logistic co-ordination net.
- f. Formulate and issue general policies on the use of afloat support ships.
- g. Advise the MNMF CDR of anticipated ammunition replenishment options based on expected threat and planned tactics. Co-ordinate the replenishment of critical shortages.
- h. Identify critical passengers (eg CASEVACs) for transfer.

i. Based on guidance from the MNMF CDR, establish lower limit criteria/tripwire requiring GLC reporting action. Advise the MNMF CDR when that limit is reached and state a plan of corrective action. Items requiring minimum, lower limits are to be as set out in ALP 4.1 Article 0203.

5. Additional Tasks. Although not specifically covered in ALP 4.1 Paragraph 0203, there may be other tasks that are considered for inclusion of the FLC's TORs on specific occasions. These may include:

- a. Maintain overall supervision of all N4 financial matters.
- b. Ensure that operation/exercise records and reports required of the N4 Division are maintained and forwarded as directed.
- c. Lead the N4 staff as directed by the MNMF CDR.

ANNEX 1B

**TERMS OF REFERENCE FOR THE GROUP
LOGISTICS CO-ORDINATOR****B101. Purposes**

1. **Primary Purpose.** The GLC plans and co-ordinates logistic support within a Task Group (TG).

B102. Superiors

2. **Accountability.** The GLC is accountable to the Task Group Commander (CTG) for all logistic matters of the Group.

B103. Authority

3. **Authority.** The GLC is authorised to:
 - a. Liase with the FLC for required logistic support outside the TG
 - b. Prioritise and co-ordinate the employment of all logistic assets within the TG.
 - c. When directed by the FLC, liase with the MNLC for co-ordination of specific shore-based logistic evolutions. Direct liaison with the ALSS or FLS will normally be authorised by the MNLC.

B104. Responsibilities

4. The principal responsibilities of the GLC are:
 - a. Report the logistic status of the TG to the FLC
 - b. Appoint (or cause to have appointed) individuals to carry out the duties of LALC, MATCONOFF, URC and RC.
 - c. If no FLC is assigned, carry out logistic duties for the MNMF as per ALP 4.1 paragraph 0203.
 - d. Act as the CTG's logistic advisor.
 - e. Promulgate OPTASK LOG and OPTASK RAS for the TG.
 - f. Plan and co-ordinate UNREPs, rendezvous times and positions, promulgate OPTASK RAS if no FLC is assigned.
 - g. Co-ordinate PMC movements within the TG, identifying critical passengers (eg CASEVACs) and cargo.
 - h. Maintain TG logistic readiness and sustainability data (ammo, POL, OPSTAT DEFECT, PMC) and advise the CTG.

- i. Develop a plan of action to provide identified requirements; obtain the CTG's approval, execute the plan.
- j. Submit a LOGASSESSREP to the FLC daily (or the MNMF CDR if no FLC is assigned).
- k. In event of anticipated material shortages, recommend redistribution of logistics assets to the appropriate higher authority.

B105. Additional Tasks

5. Although not specifically covered in ALP 4.1 Paragraph 0205, there may be other tasks that are considered for inclusion of the GLC's TORs on specific occasions. These may include:

- a. Maintain overall supervision of all N4 financial matters.
- b. Lead the N4 staff as directed by the MNMF CDR.
- c. Ensure that operation/exercise records and reports required of the N4 Division are maintained and forwarded as directed.
- d. Assist the CTG in logistic planning, ensuring that it supports that particular TG's part of the overall MNMF operation.
- e. Co-ordinate with the TG Medical Advisor for handling and evacuation of CASEVACs or MEDEVACs

ANNEX 1C

CHECK OFF LISTS FOR FORCE AND GROUP LOGISTICS COORDINATOR - PLANNING PHASE

1. Some of the checks will overlap. This is intentional; the same problem will often be relevant to two or more levels. Each level will view a problem from a different perspective, and close liaison between and within HQs will be required in planning and execution. This list shows the need for the close relationship between the SOO and the GLC.

L = Lead I = Interest A = Assist

TASK	SOO	FLC GLC
Read the Mission Directive, the Commander's Directive and the Commander's Admin Order	L	A
All logistics planning should be carried out in close liaison with the relevant desks in HQs		L
Study and if necessary influence the force composition and mission	L	A
Produce tactical plan/Promulgate OPGEN	L	A
Be aware of and influence the equipment enhancement programme	L	I
Research ship/aircraft capabilities required support, consumption patterns expenditure rates	I	L
Assess anticipated ammo requirements based on expected threat/tactical plan	L	A
Assess requirements for replenishments from organic and prepositioned sources, and planned resupply. (Ammo/POL/Provs)	I	L
Assess escort requirement for movement of logistic shipping in theatre	L	A
Establish TRIPWIRE levels for FLC/GLC reporting for Fuels/ Ammunition/ Stores/Deployable Offboard Sensors and Decoys/Victuals	A	L
Establish plan for ammunition expenditure reporting	I	L
Establish medical and casualty facilities available, develop a plan and agree it with HQ. Plan should include details of medical regulation, movement assets, landing sites	I	L

Establish burial procedures (N1 lead)		I
Establish forward repair and maintenance facilities available (including specialist technicians), develop a plan and agree it with CCJTF HQ/MJLC/MNLC(M)	I	L
Establish salvage facilities available, develop a plan and agree it with CCJTF HQ/MNLC(M)/MJLC	I	L
Agree ALSS/FLS plans as organised by MNLC(M)/MJLC, ensuring in theatre lift arrangements to ships (organic HDS/ HTUFT from shore/ despatch vessels etc) are adequate	I	L
Consider placing LO with other CCs, MJLC and MNLC(M).		L
Establish criteria for personnel (roulement, VIPs, other visitors, compassionate etc N1 lead	I	I
Establish criteria for mail and cargo movement (including returns)	I	L
Establish theatre maritime evacuation plan and contribute to Theatre Evacuation Plan (N1 lead)	I	I
Establish theatre maritime PW plan and contribute to Theatre PW plan (N1 lead)	I	I
Agree MNLC(M)/MJLC plan to coordinate PMC movement		L
Establish TF/TG HDS assets and procedures (including landing sites ashore and decks afloat	I	L
Establish from MJLC/MNLC(M) any HNS available (Ports/ HTUFT/ STUFT/ Tugs/ Despatch vessels hospitals/ FRS/ Gash barges) + payment	I	L
Establish procedures for water/gash/sullage/CIVGAS	I	L
Identify communications available for logistics	L	A
Establish comms between GLC/ALSS/MNLC(M)/FLS	A	L
Consider delegation of LALC/MCO/URC/RC roles	I	L
Compile records to monitor logistic status of TF/TG through receipt of required reports (LOGSITREP/LOGASSESSREPs)		L
Establish logistics reporting update times		L
Establish serviceability of ships/ aircraft in TF/TG (CASREPs)	I	L
Coordinate resupply of critical and low priority stores/POL/ammo etc with MNLC(M) (airdrop/sealift/air to FLS' etc)	I	L
Establish procedures for stores returns.		L

Identify stores/equipment special to climate/ environment		L
Establish (or check/agree establishment, if delegated): - MCO Plan - Finance reporting procedure for costs		L
Obtain support shipping LOADSUM (stores, spare parts, food and ammo)		L
Reassess adequacy of TF/TG logistic assets to carry out the mission. If not sufficient discuss alternatives with CJTFHQ	I	L
Designate alternative Flagship. Designate alternative FLC/GLC (usually the alternative Flagship, but should have similar IT capacity)	L	A
Signal TF/TG logistic plan to all units (OPTASK LOG and OPTASK RAS). . This will be preceded by Log Annex to OPLAN.	I	L
Promulgate the HIFR capabilities available in TG/TF, together with rates of pumping and capacities		L
Call meeting for logistics officers from TF/TG ships, to ensure understanding of OPTASK LOG and provide forum for discussion (Meeting should be prior to departure and N/J4 from HQs should be invited)		L

ANNEX 1G

**MATERIAL CONTROL OFFICER (MCO)
(USUALLY FLAGSHIP SUPPLY OFFICER)**

L = Lead

I = Interest

A = Assist

TASK	SOO	FLC GLC
Obtain Support Shipping LOADSUM (stores, spare parts, food, ammo)		L
Monitor the OPSTAT Defect and related EMREQs from units of the TF/TG	I	L
Monitor the LOGSITREP reports from units for non-receipt of stores and stores required		L
Receive replies from EMREQ signals, and designate the appropriate source and method for supply		L

INTENTIONALLY BLANK

ANNEX 1H

REPAIR, MAINTENANCE AND DAMAGE COORD (RC)

L = Lead I = Interest A = Assist

TASK	SOO	FLC/ GLC
Give professional advice to the FLC/GLC and ultimately the CTG	I	L
Agree damage repair plan with FLC/GLC, and then discuss with MJLC/MNLC(M)	I	L
Agree long term maintenance plan for TF/TG with HQ, keeping FLC/GLC informed. Advise FLC/GLC on conduct of that plan and of any changes	I	L
Establish, monitor and brief the CTF/CTG on the serviceability state of the TF/TG from LOGSITREP reports, OPSTAT DEFECT, OPSTAT DAMAGE reports and other inputs	I	L
Arrange assistance if necessary for ships with defects	I	L
From OPSTAT DAMAGE reports, advise FLC/GLC (ultimately CTF/CTG) on operational implications of technical defects and damage	I	L
If FMR/BDR ship available, then arrange for assessment team to be transferred to damaged ship. If not, then arrange an assessment team from elsewhere (eg Flagship)	I	L
Recommend allocation of damage repair to Force/Group repair asset, or out of theatre. FLC/GLC will arrange movement and escort of damaged ship in theatre	I	L

ANNEX 1I

UNDERWAY REPLENISHMENT COORDINATOR (URC) (USUALLY RETAINED BY CTG)

L = Lead

I = Interest

A = Assist

TASK		
Provide broad RAS intentions to OPGEN (to be amplified idc by LOGSITREPMAR)	A	L
Information available to RAS COORD: URC is to note the following signals and take any appropriate subsequent action: - OPSTAT UNITs from TG ships OPSTAT RASs (from Afloat Support Ships) - OPSTAT CARGOs (from Afloat Support Ships) URC to compile and maintain fuel graphs for individual ships.	I	L
Request ships signal their preferred rig in OPSTAT UNIT for each supply ship, and an alternative on the opposite side	I	L
Provide RAS input to OPGEN, expanding concept in OPTASK LOG	I	L
Signal standing OPTASK RAS detailing concept, notice to RAS, rigs to be used, delivery boy procedure (if appropriate). (Customer ship may signal OPSTAT RASREQ if appropriate and if time; if not, sufficient instructions contained in standing OPTASK RAS for customer to signal R/V, RAS course and speed. Details of requirement will always be useful to supplying ship, and should be passed if time permits).	I	L
For RAS(S) or (A), ensure minimum of 3 days notice of requirements passed where possible. Emergency short notice RAS(A) or (S) may take place as soon as loads have been made up by the supplying unit.	I	L
Afloat Support ships should reflect issuable cargo remaining in daily LOGSITREPs; their LOGSITREP should also reflect successful RAS(S)(A), as should those of individual units.	I	L
