Bi-SC DIRECTIVE
NUMBER 80-90

TT 203294
16 November 2007

NATO TASK LIST (NTL)

This directive, revision 3, supersedes Bi-SC Directive 80-90 dated 18 June 2004.

- REFERENCES:
- A. Bi-SC 80-90, NATO Task List, 18 Jun 04
 - B. MC 400/2, Military Committee Guidance for the Military Implementation of Alliance Strategy, 23 May 00
 - C. IMSM-0530-2005, Further Development of Task Lists and Forces Standards, 7 Jul 05
 - D. IMSM-0152-04, Report on New NATO Task List, 10 Mar 04

1. **Applicability.** This directive is applicable to all Strategic Command (SC) Military Headquarters, or any other organisation operating within the SC chains of command. Commands and organisations not subordinate to SACEUR or SACT are not, therefore, bound by the terms of this directive unless the agreement in question involves a SC or one of its subordinates.

2. **Supplementation.** Only commands immediately subordinate to SHAPE and HQ SACT (See Annex C) are authorised to supplement this directive, which must in any case have the prior written approval of the respective Strategic Headquarters. Note that SHAPE is the lead SC for this Bi-SC Directive.

3. **Interim Changes.** Interim changes are authorised when jointly approved by the Chiefs of Staff for SHAPE and HQ SACT. Note that the next revision should be available in two years.

4. **Purpose.** Bi-SC 80-90, the NATO Tasks List (NTL), serves as a common language and reference system for NATO's Strategic Commanders, their subordinate commanders and agencies, operational planners, and for training and exercise planners, and to provide users with a single document that provides a comprehensive listing of all joint and combined military tasks levied upon Alliance headquarters and associated forces. Additionally, this document is intended to obsolete previous Bi-SC Military Tasks for Interoperability (MTI) instructions.

CHAPTER 1

INTRODUCTION

1-1. **Background.** The NATO Task List (NTL) aims to provide NATO Commanders and their staffs with a catalogue of appropriate missions and tasks at all levels, as a readily available tool for the initiation of operations and planning of training. A dramatically changed security environment and an increased emphasis on new operational requirements for NATO forces necessitate that missions and tasks be consistent with the new focus of the Alliance. Crisis response operations and implementation of new concepts such as Combined Joint Task Force (CJTF), Graduated Readiness Forces (GRF) HQs, NATO Response Force (NRF) or the European Security and Defence Identity (ESDI) require revised missions and tasks, as outlined in the Alliance's Strategic Concept and subordinate documentation. Above all, at the November 2002 Prague Summit, the NATO Heads of State and Government endorsed the proposal to realign the Strategic Commands (SC) along functional lines with SACEUR assuming responsibility for all operations, and SACT assuming responsibility for Transformation. Both realigned SCs have identified the need for a broad realignment of tasks. Similarly, expanding security initiatives such as Partnership for Peace (PfP) call for the definition of relevant connectivity between new missions and tasks in new areas. Consequently, as the reference document for NATO military tasks, the NTL is revised to include these changing tasks, missions and the Alliance vision.

1-2. **Purpose.** Bi-SC 80-90, the NTL, serves as a common language and reference system for NATO's Strategic Commanders, their subordinate commanders and agencies, operational planners, and for training and exercise planners to communicate mission requirements.

1-3. **Scope.** The NTL is a readily available tool for operations, training, and force planning. The intent of the NTL is to provide users with a single document that provides a comprehensive listing of all joint and combined military tasks that Alliance headquarters and forces are required to perform. It is important to note that the NTL should be used primarily as guidance to ensure a standardised approach to govern all applicable tasks required of the NATO Command Structure (NCS) and NATO Force Structure (NFS) HQs and their subordinate forces for operations.

1-4. **NTL's Relation to Alliance's Strategy.** The NTL, as a planning tool and a compendium of the Alliance's missions and tasks at the strategic, operational and tactical levels, follows the guidance provided in MC 400/2 as a venue for follow-on missions and tasks in a hierarchical order. It translates this pol-mil guidance into operational language and further breaks it down into military missions and tasks. NTL tasks are crosschecked against the guidance above for compliance and completeness, resulting in seven Essential Operational Capabilities comprised of strategic, operational, and tactical tasks. Thus, the NTL relays this information to commanders and their staffs for use in operations and exercise planning, and to some extent in force planning areas to ensure that the Alliance's overarching

Bi-SCD 80-90

principles and top level guidance are implemented in all applicable areas with the same terminology and a common understanding.

1-5. **General.** Designed as a menu of capabilities, including mission-derived tasks, the NTL provides common terms of reference for exercises, operations and determination of required capabilities. The NTL also supports the operational planning process by providing a common language and reference system for identification of tasks in the mission statement, concept of operations and subordinate tasking. The NTL is a key element of the requirements-based, "mission-to-task" joint and combined training system.

- a. The NTL's systematic method of relating tasks to missions can provide a wide range of utility from enhancing the construction of a joint exercise, to being used for long term planning. The list is also aimed to serve as interoperability and communication tool to assist Alliance planners perform their functions more consistently.
- b. The list is applicable to Article 5 Collective Defence, Non-Article 5 Crisis Response Operations (CRO) and Consultation & Cooperation. However, the NTL is not attempting to catalogue all non-operational tasks (i.e., routine staff activities) that may be counter-productive, given the staff effort already expended on the Functional Reviews, re-alignment of the SCs and the advanced state of development of Management Plans covering non-operational tasks within both SCs. Consequently, those tasks are not added to the NTL.
- c. The NTL does not provide direction on how to perform a task, but provides an enhanced communication tool in the definition of related missions and tasks to a given mission. The NTL does not address "who is to perform a task and how". It only caters for "what" is to be performed in terms common to the joint force commanders and their subordinate components.
- d. In support of NATO's training process, the NTL should be used as a quick reference to identify tasks and standards to which a NATO Commander and his staff should be trained. In the exercise planning area, NTL tasks provide the basis for training objectives.
- e. The NTL is not a listing of service specific tasks. Subordinate commands and single services should refer to the NTL as a catalogue of joint and combined tasks to which they contribute.

1-6. **Military Tasks and Interoperability.** Tasks should be designed to promote operational interoperability between PfP within various processes and circumstances that embodies the PfP programme. Partner units must be capable of achieving the interoperability. Interoperability serves as a key element in supporting future military cooperation with the ultimate goal of more operational partnership. Interoperability is an important goal for planners in the NATO Commands to develop and coordinate

Bi-SCD 80-90

through education, training and exercise activities for Partners. These activities are also important to Partners allowing them to concentrate on activities relevant to their own interoperability aims. With the integration of MTIs into the NTL Version 3, Partners will have a broader menu of tasks to help integrate Partner units into NATO operation. The former MTIs are identifiable by an asterisk (*) in the task headline.

1-7. **Forces Standards.** Complementary to the NTL are the ACO Forces Standards volumes (AFS). The purpose of the AFS is to determine a set of forces standards in the operational, procedural, material and technical fields and performance criteria. The AFS establish a common foundation for the training and exercises in peacetime, and employment of units allocated to NATO. The AFS enable the Supreme Allied Commander Europe (SACEUR) and his subordinated commanders to evaluate and assess forces and headquarters (HQ). Furthermore, the AFS support the integration of new member nations by providing long-term development goals for their forces.

1-8. **Standardization.** The NTL should promote a common means of development and implementation of concepts, doctrines, procedures and designs to achieve and maintain the required levels of compatibility, interchangeability or commonality in the operational, procedural, materiel, technical and administrative fields to attain interoperability.

1-9. **Tools for Operational Planning, Force Activation and Simulation (TOPFAS).** TOPFAS automates NATO's Operational Planning Process. TOPFAS enables them to readily identify and assign appropriately the tasks required to accomplish the mission. TOPFAS' structure uses the tasks list methodology in NTL as Assigned Tasks (AT), Implied Tasks (IT), and Subordinate Tasks (ST). It creates a list of force-oriented tasks (FOT) that are used with a series of troop-to-tasks rules to create a list of generic forces suitable to accomplish the mission. It is an essential tool for operational planners in the generation of an accurate Statement of Requirements (SOR) based on analysis of mission-derived tasks.

1-10. **Standardization Tasking Reporting Analysis Process (STRAP).** STRAP uses the NTL structure and information from documents, existing databases and working group reports to build a common standardization picture around each task. Within its methodology, the STRAP gives a complete view of the total standardization documentation that supports each task and their related working groups and enables the users to match issues to NATO tasks that effect standardization and interoperability.

1-11. **Management Plans Tasks.** The Strategic Commanders develop separate Management Plans (MANPLAN) based on their unique missions. These also determine strategic priorities for resource management, including staff effort and the generation of requirements. Management Plans cascade tasks, priorities and resources down the operational chain of command to subordinate commanders. Subordinate Commanders at each level carry out mission analysis and then issue their own plans with further break out of tasks and resources.

Bi-SCD 80-90

1-12. Fundamental Security Tasks. NATO's essential purpose is to safeguard the freedom and security of all its members by political and military means in accordance with the North Atlantic Treaty and the principles of the United Nations Charter. To achieve its essential purpose, the Alliance performs the following security tasks:

- a. **Security:** To provide one of the indispensable foundations for a stable Euro-Atlantic security environment based on the growth of democratic institutions and commitment to the peaceful resolution of disputes, in which no country would be able to intimidate or coerce any other through the threat or use of force.
- b. **Consultation:** To serve, as provided for in the Article 4 of the Washington Treaty, as an essential transatlantic forum for Allied consultations on any issues that affect their vital interests, including possible developments posing risks for members' security, and for appropriate coordination of their efforts in fields of common concern.
- c. **Deterrence and Defence:** To deter and defend against any threat of aggression against any NATO member state as provided for in Articles 5 and 6 of the Washington Treaty.
- d. **Crisis Management:** To stand ready, case-by-case and by consensus, in conformity with Article 7 of the Washington Treaty, to contribute to effective conflict prevention and to engage actively in crisis management, including Crisis Response Operations.
- e. **Partnership:** To promote wide-ranging partnership, cooperation, and dialogue with other countries in the Euro-Atlantic area, with the aim of increasing transparency, mutual confidence and the capacity for joint action with the Alliance.

1-13. Essential Operational Capabilities. Essential Operational Capabilities (EOC) are the required military capabilities necessary for Alliance forces and headquarters. EOC are used as the organizing tool in this document. They are fundamental to the identification of the Alliance's missions and tasks. EOC are defined below:

- a. **Timely Force Availability:** To establish and sustain sufficient and effective military presence at the right time, including the ability to build up forces, through appropriate and graduated readiness, to meet any requirements resulting from a change in the strategic environment, and to rotate forces which are in engaged in an operation.
- b. **Effective Intelligence:** To collect and disseminate reliable information in a timely manner in order to anticipate and respond, as necessary, to any requirement resulting from challenges to Alliance security interests or hostile actions.

Bi-SCD 80-90

- c. Deployability and Mobility: To concentrate forces and engagement capability, at the right place and appropriate time (deployability) and to be able to move quickly once deployed (mobility).
- d. Effective Engagement: To be able to operate forces, particularly weapons systems, effectively across the wide spectrum of possible circumstances.
- e. Effective Command, Control and Communications: To direct Allied forces and HQs for the accomplishment of Alliance missions or tasks.
- f. Logistics Sustainability: To provide timely and effective logistic support for any operations until NATO's objectives have been achieved.
- g. Survivability and Force Protection: To minimise the effects of any adversarial action, to include the effects of CBRN weapons and devices and toxic industrial materials, whilst ensuring allied freedom of action and force effectiveness.

Bi-SCD 80-90

CHAPTER 2

NTL LEVELS OF TASKS

2-1. Three Distinct Levels of Tasks. The tasks identified and defined in the NTL are a menu for commanders of "what" tasks can be performed without specifying "how" they will be performed or "who" performs them. The NTL is organised into three separate levels: Strategic level tasks, Operational level tasks and Tactical level tasks. Each task in the NTL is individually indexed to reflect its placement in the structure and coded as follows: Strategic level tasks (ST), Operational level tasks (OT), Tactical level tasks (TT).

2-2. Indexing as Standard Reference System. Indexing provides a standard reference system for users to address and report requirements, capabilities, or issues. The sub-tasks falling under each primary task have identification numbers subsequent to the primary task, such as ST 1.0 will have ST 1.1, ST 1.2 etc., while ST 1.2 may have further strategic level tasks designated by ST 1.2.1, ST 1.2.2 and so on. This is also applicable to operational and tactical levels and ensures a consistent numbering system.

2-3. Linkages to Other Tasks. The tasks listed within the NTL can be linked to other tasks within and across the levels (Strategic, Operational, and Tactical). Vertical relations connect tasks at one level to related tasks at other levels. On the other hand, horizontal relations connect fundamentally different tasks at the same level. Vertical Relations provide the connecting structure across the strategic, operational and tactical levels. For example, although the generic elements of strategic, operational and tactical intelligence are similar (i.e., collection, processing, analysis, evaluation, etc.) the tasks and sub-tasks associated with each level are distinct in terms of aim, scope, and which organisations will perform them. This vertical relationship, which forms an intelligence system, is maintained to some degree regardless of the type of military operation being planned or conducted. The NTL provides a basic structure through the use of vertical relations; however, it is recognised that there may not always be a clear-cut flow between the levels of the NTL. A horizontal relation is defined within the context of a military operation. That is, when conducting a military operation different tasks are dependent upon the accomplishment of others. These tasks must be performed in careful co-ordination with one another to achieve the effects desired by the commander. The co-ordination of these tasks may be in terms of space, time, degree or even resources. In terms of time, tasks might be either simultaneous or consequent (where one of the tasks is a prerequisite for the other).

2-4. Mission, Operation and Task Relationship. The NTL focuses on tasks and avoids including terms that refer to more global activities such as operations. A military operation, like conducting an amphibious assault, is too broad of a task, and therefore should not be included in the task list. NTL contains the activities performed by military units, organizations, and systems. Tasks should be applicable to a wider variety of operations and regions where operations might be conducted.

Bi-SCD 80-90

The Allied Doctrines describes "How" joint tasks are performed. Allied Joint Doctrine and Publications provide authoritative guidance on how joint tasks are performed. Plans and OPORDs specify "Who" and "When" joint tasks are performed. A joint force commander often will have a choice regarding the Service or functional component to perform joint tasks. These decisions are made during the planning process when developing a concept of operation for a joint military mission.

2-5. Levels of Operations and Levels of Command. An operation is a military action that supports a mission and consists of tasks, which are generated from mission analysis. The mission establishes the requirement to perform tasks and provides the context for each task performance (including conditions under which a task must be performed). It determines where and when a task must be performed (one or more locations). Finally, it determines the degree to which a task must be performed (implied in the concept of operation) and provides a way to understand precisely how the performance of a task contributes to successful operations. Operations by Allied joint forces are directed, planned and executed at three levels. They are directed at the military-strategic level and planned and executed at the operational and tactical levels. Actions are defined as strategic, operational or tactical based on their effect or contribution to achieving the specified objectives. The relationship between the three levels is illustrated in Figure 2-1, indicating that they are not directly linked to a particular level of command, size of unit, equipment or type of force and its components:

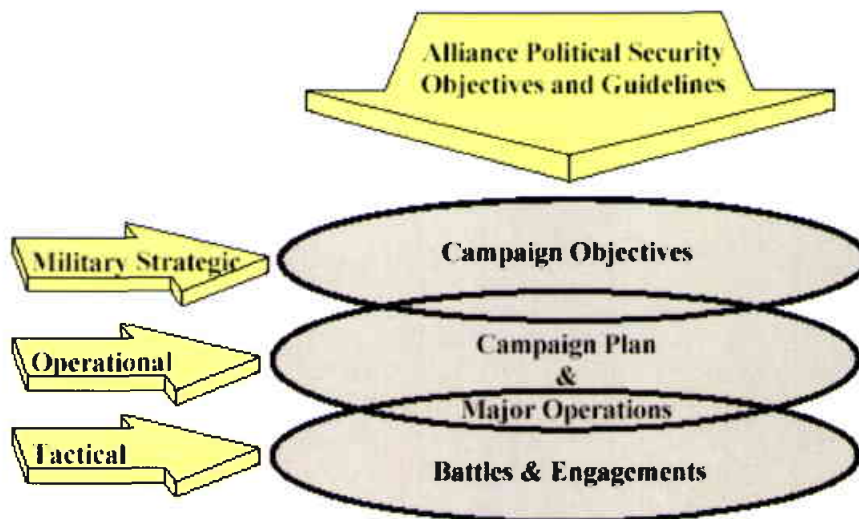

Figure 2-1 - The Levels of Military Operations

2-6. Distinguishing Levels of Joint Operations. The distinction between the strategic, operational and tactical levels of joint operations will seldom be tidy. This is because even if a force is only of small tactical value, its employment will have a political context/impact in relation to the nation that provides it. The key to

Bi-SCD 80-90

delineation is that normally a strategic authority allocates objectives and resources, whilst setting necessary limitations. At the operational level, the commander orders the activities of the assigned formations in pursuit of the plan of campaign. At the tactical level, commanders employ units for combat in order to achieve the military objectives of the campaign. However, in the present security environment, traditional responsibilities are blurred, and the different levels of operations merge because even a small tactical incident could be considered politically sensitive and thus its conduct is under strict supervision at the strategic level.

2-7. Levels of Command. The levels of command are **strategic, operational, component and tactical**. These levels should be heavily considered when formulating tasks for NATO missions.

- a. **Strategic Level of Command.** At this level, the NATO Command Structure is focused on planning and executing NATO operations (including the strategic guidance promulgation), and on transformation of NATO military capabilities over the full range of Alliance Military Missions within a political-military framework endorsed by the MC and approved by the NAC in order to achieve the strategic objectives of the Alliance. As a responsibility of this level of command, SACEUR assumes the overall command of the operations and issues strategic military direction to the subordinate commanders.
- b. **Operational Level of Command.** At this level, based on strategic military guidance, military campaigns are planned, conducted, sequenced, directed and sustained in order to achieve the required military strategic end-state. The NATO Military Command Structure provides three operational commands. These commands will act as operational commanders for NATO-led operations.
- c. **Component Command Level of Command.** At this level, battles and engagements are planned and executed within an overall campaign. Component Command level provides the service specific expertise for the operational level, as well as operational level service specific advice on joint operational planning and execution. They are available as JFCC HQ for operations. To fulfil operational requirements, NATO Component Commands can be tasked by SACEUR to provide a C2 capability under the command of any of the three operational Commanders. GRF (L/M/A) HQs are subordinated to a designated NCS HQ that will act as the Joint Force HQ. These GRF HQs will be available as JFCC HQ for operations.
- d. **Tactical Level of Command.** At the tactical level, forces are employed to conduct military tasks and gain military objectives. Successful accomplishment of these objectives is designed to contribute to success at the operational and strategic levels. NFS HQs might be subordinated to CC HQs in case of a multi-corps operation. Consequently HQs provided within the NFS are considered to operate on the tactical level.

Seven Areas of NATO Task List (NTL) Tasks

The NATO Task List tasks are organized under the following seven appendices:

- Appendix 1. **Timely Force Availability:** To establish and sustain sufficient and effective military presence at the right time, including the ability to build up forces, through appropriate and graduated readiness, to meet any requirements resulting from a change in the strategic environment, and to rotate forces which are in engaged in an operation.
- Appendix 2. **Effective Intelligence:** To collect and disseminate reliable information in a timely manner in order to anticipate and respond, as necessary, to any requirement resulting from challenges to Alliance security interests or hostile actions.
- Appendix 3. **Deployability and Mobility:** To concentrate forces and engagement capability, at the right place and appropriate time (deployability) and to be able to move quickly once deployed (mobility).
- Appendix 4. **Effective Engagement:** To be able to operate forces, particularly weapons systems, effectively across the wide spectrum of possible circumstances.
- Appendix 5. **Effective Command, Control and Communications (C3):** To direct Allied forces and HQs for the accomplishment of Alliance missions or tasks.
- Appendix 6. **Logistics Sustainability:** To provide timely and effective logistic support for any operations until NATO's objectives have been achieved.
- Appendix 7. **Survivability and Force Protection:** To minimise the effects of any adversarial action, to include the effects of CBRN weapons and devices and toxic industrial materials, whilst ensuring allied freedom of action and force effectiveness.

APPENDICES:

- 1. Timely Force Availability.
- 2. Effective Intelligence.
- 3. Deployability and Mobility.
- 4. Effective Engagement.
- 5. Effective Command, Control and Communications (C3).
- 6. Logistics Sustainability.
- 7. Survivability and Force Protection.

TIMELY FORCE AVAILABILITY

STRATEGIC TASKS (ST)

ST 1.0.0	Develop Combined/Joint Warfighting and Other Concepts and Doctrine
Definition	To describe how future military operations may be conducted in light of past experience, and current and evolving doctrine, future capabilities, future or evolving threats, and future technology.
Supporting Documentation	MC 400/2
ST 1.1.0	Recommend Warfighting and Other Requirements and Test Concepts
Definition	To recommend and prioritize the theatres' peacetime and wartime needs in light of guidance, threat estimates, technology, projected capabilities, resource constraints, and resulting strategy or employment concepts. This task includes testing and recommending concepts for mobilizing, deploying, employing, sustaining, and redeploying the force. Requirements include the size and structure of the force needed to achieve national military objectives in the theatre through execution of the approved theatre strategy and campaign plans. Where necessary, proposed adjustments to theatre boundaries and restrictions and constraints should be recommended. The task includes requirements for supporting other combatant commanders.
Supporting Documentation	AJP 1.0 (B) AJP 3.0 Guidelines For Operational Planning (GOP)
ST 1.1.1	Promote and develop the Special Operations capability to meet NATO Level of Ambition
Definition	Uses the tools of Policy, Concepts, Force Requirements, Education, Exercises, Liaison and Operations to promote and develop SOF capabilities in order to deliver a SOF Component for ACO.
Supporting Documentation	MC 437 AJP 1.0 (B)

Bi-SCD 80-90

- ST 1.2.0
Definition Obtain Support for NATO Forces and Interests
To make agreements with, and seek the assistance of, alliance and other countries in the region for support of NATO forces. This support includes status-of-forces agreements, sustainment, intelligence, operations, C2, over flight and landing rights, lines of communications, facilities, space, labour, skilled manpower. Support may be from governments, NGOs or private entities.
- Supporting
Documentation MC 400/2
- ST 1.2.1
Definition Arrange Stationing for Forces
To obtain approval for and to base and accommodate forces to best support military exercises and operations. This task is conducted within the bounds of physical limitations and political constraints.
- Supporting
Documentation MC 400/2
- ST 1.2.2
Definition Establish Arrangements for Support
To establish, in anticipation of requirements to conduct operations with friends and allies outside the Alliance command structure, mutually agreed procedures. This task includes harmonization of the approaches of the respective national forces, including actions to preclude or minimize fratricide. This activity includes establishing command relationships and exchanging intelligence.
- Supporting
Documentation MC 400/2
- ST 1.2.3
Definition Provide for En-Route Support and Clearances
To arrange support, diplomatic clearances, and over-flight rights with affected nations for forces that are in transit from one locality to another. Strategic deployments may need intermediate staging bases or areas for refuelling, regrouping of ship convoys, replenishment, exercise, inspection, and concentration or redistribution of forces. Staging bases or areas may require airfields and facilities (e.g., navigation aids, communications, maintenance and servicing facilities); security; augmentation support; parking and throughput facilities; construction services; health services; berths;

Bi-SCD 80-90

Supporting
Documentation

beaches; stevedores; and utilities.
MC 400/2

ST 1.3.0
Definition

Conduct and coordinate Manning of Forces
To coordinate with TCNs and HNs the provision of trained and organizationally sound units and replacements and to provide for necessary personnel services and health services to support Alliance strategy, campaigns, and routine support.

Supporting
Documentation

MC 400/2

ST 1.3.1
Definition

Establish an Allied / Combined Joint Force
To establish, or participate in, a force, which is composed of significant elements, assigned or attached, of two or more Military Departments, and possibly non-DOD agencies, operating under a single commander authorized to exercise operational control over such joint forces. The term joint force commander includes combatant commands, subordinate combatant commands, and joint task forces. This task includes organizing the subordinate command and headquarters, staffing the headquarters, designating the commander, issuing mission guidance, and other activities associated with establishing such a command. This task also applies to establishing a multinational force. A joint force, when a combatant command, would virtually consider all theatre strategic-level tasks; if a subordinate joint task force, it would focus on the operational level tasks; or, if a designated subordinated command, a combination of theatre strategic and operational tasks. In all cases, the theatre strategic environment and mission of the force will determine the relevant tasks.

Supporting
Documentation

MC 400/2

ST 1.3.2
Definition

Augment the Joint Force Command Staff
To augment the supported joint force commander's staff with trained knowledgeable personnel to add specific capabilities to that staff. This augmentation may be in the form of a joint force augmentation cell or special, ad hoc augmentation on request of the joint force commander. This task is separate and distinct from the exchange of liaison officers.

Supporting

A-1-3

Bi-SCD 80-90

Documentation MC 400/2

ST 1.3.3 Develop Joint Force Liaison Structure
Definition To establish a structure to maintain contact or
intercommunication between elements of the joint force,
combat support agencies, joint organizations, functional
combatant commands, and multinational forces to ensure
mutual understanding and unity of purpose and action.

Supporting
Documentation MC 400/2

ST 1.3.4 Determine Requirements and Allocate Human Resources
Definition To determine manpower requirements and allocate the
resources from approved positions in the force structure. This
task includes determining which requirements will be
supported with authorizations (spaces) by grade and skill
level.

Supporting
Documentation MC 400/2

ST 1.3.5 Plan, Coordinate and Procure, Train, Supply, Transport, and
Maintain Personnel
Definition To procure, train, and assign personnel to authorized
positions in the force structure. This task includes
accountability of assigned forces and movement of trained
personnel replacements to their unit assignments.

Supporting
Documentation MC 400/2

ST 1.3.6 Provide for Personnel Management and Morale Support
Definition To manage the military personnel and the civilian work force,
including procurement, accountability, training, education,
utilization, development, promotion, assignments, motivation,
retention, and separation/retirement policy. To provide policy
for the entertainment and recreational facilities and activities
for troops, including motion pictures, libraries, sports, live
entertainment shows, Service clubs, musical entertainment,
crafts, and outdoor recreation. This activity includes providing
resources, facilities, and support to NATO commands for
morale, welfare, and recreation activities, especially rest and
relaxation for service members from the rigors of sustained
combat, and support operations.

Supporting MC 400/2

Bi-SCD 80-90

Documentation

- ST 1.4.0 Coordinate Forward Presence of Forces in Joint Operations Area (JOA)
- Definition To collaborate with the nations, other Alliance agencies, groups, and non-Alliance nations to allow the stationing of or temporary presence of combat and support units. The objective is to allow the rapid application of the military instrument of Alliance security by placing forces in a position from which they can rapidly respond to a crisis or can support the rapid response of other forces to such a crisis.
- Supporting AJP 1.0 (B)
Documentation AJP 3.0
-
- ST 1.4.1 Station Forces Forward in Joint Operations Area (JOA)
- Definition To collaborate with other NATO agencies and the NAC and to work with foreign governments to allow the permanent or temporary stationing of NATO combat and support units. Further, to provide the NATO funds necessary to support those forces and any accompanying dependents. Includes the collection of environmental background data to establish any endemic hazard levels.
- Supporting AJP 1.0 (B)
Documentation AJP 3.0
-
- ST 1.4.2 Support Establishment of Access and Storage Agreements
- Definition To support the CJTF commander's efforts to obtain agreements for periodic access by NATO personnel and units and for the permanent and/or temporary stationing ashore or afloat of selected items of equipment and supplies. This task includes collaborating with other NATO departments and agencies, the NAC, and foreign governments to develop treaties, executive agreements, and memorandums of understanding with HNs or international organizations. This task supports proliferation reduction measures.
- Supporting AJP 1.0 (B)
Documentation AJP 3.0
-
- ST 1.4.3 Generate and Disperse Joint Operations Area (JOA) Forces
- Definition To notify, alert, and increase the readiness of forces capable of conducting strategic attack. This task also includes assembling, and/or dispersing forces capable of conducting/supporting strategic attack in a posture preparatory to attacking strategic targets as well as surviving forces on tactical threat warning. This task includes those

Bi-SCD 80-90

forces assigned to supporting commands in support of the Single Integrated Operation Plan (SIOP) and other strategic plans.

Documentation Bi-SCD 75-2 (ETEED)

ST 1.5.3
Definition

Coordinate Participation and Provide Interface
The Political/Military interface at strategic level must work smoothly and effectively. While a high level of political interest can be assumed in real-world crises, the same is not true for exercises. Where appropriate, through the IS/IMS, keep NATO political authorities informed of exercise events via verbal and written briefings and foster interest through visits to exercises (Dates of Visit - DV days). Where appropriate, in accordance with current policy and guidance, seek NAC approval for the conduct of specific exercises as directed. Actively seek political guidance and direction and ensure that SC and subordinate commands implement it. Promote a smooth, efficient, two-way flow of information. Conduct exercises that test and enhance the Political/Military Interface. Maintain close working links with the MODs of Alliance and Partner countries. Whenever appropriate and relevant, encourage and facilitate the participation of the Media, International Organisations (IO), Governmental (GO) and Non-Governmental Organisations (NGO) in exercises and exercise-related events (workshops, seminars etc). Coordinate the participation of nations, HQs, forces and individuals, as well as non-NATO and Partner Nations. Ensure necessary agreements and MOUs are in place. Provide the interface between International Staff (IS) / International Military Staff (IMS) and subordinate Commands and between participating HQs, forces, IOs, GOs, NGOs at the Strategic Level.

Supporting Documentation	MC 400/2
OT 1.8.1	Support for identifying Requirements and Allocation of Human Resources

Bi-SCD 80-90

Definition To determine manpower requirements and allocate the resources from approved positions in the force structure. This task includes determining which requirements will be supported with authorizations (spaces) by grade and skill level.

Supporting Documentation MC 400/2

OT 1.8.2 Plan, Coordinate and Procure, Train, Supply, Transport, and Maintain Personnel

Definition To procure, train, and assign personnel to authorized positions in the force structure. This task includes accountability of assigned forces and movement of trained personnel replacements to their unit assignments.

Supporting Documentation MC 400/2

OT 1.8.3 Provide Personnel Management and Morale Support

Definition To manage the military personnel and the civilian work force, including procurement, accountability, training, education, utilization, development, promotion, assignments, motivation, retention, and separation/retirement policy. To provide policy for the entertainment and recreational facilities and activities for troops, including motion pictures, libraries, sports, live entertainment shows, service clubs, musical entertainment, crafts, and outdoor recreation. This activity includes providing resources, facilities, and support to the commands for morale, welfare, and recreation activities, especially rest and relaxation for service members from the rigors of sustained combat operations.

Supporting Documentation MC 400/2

OT 1.8.4 Coordinate Support for Forces in the Joint Operations Area (JOA)

Definition To coordinate the provision of trained and organizationally sound units and replacements and to provide necessary personnel administration, supply, field, and health services to support theatre strategy, campaigns, and routine COMMZ support.

Supporting Documentation MC 400/2

OT 1.8.5 Rehabilitate JOA Forces

Definition To restore combat-atritted units in the theatre to a desired level of combat effectiveness. Reconstitution is a melding of personnel, training, and logistics. It is a series of operational decisions and

Bi-SCD 80-90

actions that begin with removing a unit from the battlefield/space, allocating and establishing priorities and resources, and making the decision to re-employ once a readiness standard is achieved. The two types of reconstitution activities are reorganization and regeneration. On a broader scale, this task includes planning for and being prepared to execute operations for deploying and employing reconstituted forces to counter the emergence of a global threat. The reconstitution of the equipment and units is key to Homeland Security, particularly if those resources will use domestically in the consequence management role.

TACTICAL TASKS (TT)

TT 1.0.0 Definition	Plan and Conduct Education, Training and Exercises Plan for and implement education, training and exercise programmes and activities in support of NATO requirements and within command responsibilities; plan and conduct exercises and provide training and education in compliance with higher directives. Train and exercise tactical level tasks provided in this document, as appropriate.
Supporting Documentation	MC 400/2
TT 1.1.0 Definition	Plan for and Implement Higher Directives on Education, Training and Exercises Plan, coordinate and conduct education, training and exercise activities as directed by higher authorities. Assess and provide feedback on salient conclusions and recommendations.
Supporting Documentation	MC 400/2
TT 1.1.1 Definition	Plan and Coordinate Education, Training and Exercises in accordance with Higher Directives Plan for/participate in the planning of education, training and exercises as directed. Coordinate at tactical level planning, participation and conduct of activities in support of and in compliance with higher directives.
Supporting Documentation	MTEP
TT 1.1.2 Definition	Conduct Education, Training and Exercises, and Provide Feedback Conduct education, training and exercises within command responsibilities and as directed by higher authorities. Drive conclusions and recommendations, and provide feedback to higher authorities.
Supporting Documentation	MTEP
TT 1.2.0 Definition	Train and Exercise Tactical Tasks of NTL as appropriate Train and exercise tactical tasks of NTL to see the applicability and to improve tasks and procedures set forth in these documents. Provide assessments and recommendations to higher authorities for review and revision.
Supporting Documentation	MTEP

Bi-SCD 80-90

TT 1.2.1
Definition Train and Exercise Tactical Tasks of NTL as appropriate
Train and exercise tactical level tasks of NTL and standards with a view to make assessments and, if required, to provide comments for their improvement.

Supporting
Documentation MTEP

TT 1.2.2
Definition Coordinate and conduct tactical level rehearsals
To coordinate rehearsals for tactical level operations or to actually conduct commander and/or staff mission-related training rehearsals within the headquarters prior to deployment. Rehearsals provide a venue for learning, understanding, and practising an operational plan/order in the time available before actual deployment and/or execution. Rehearsing key tactical level command, operational, logistical and other anticipated actions allows participants to practise operating as a Headquarters or unit, become familiar with the operation and visualise the plan.

Supporting
Documentation MC 400/2

TT 1.3.0
Definition Report Availability of Units (*) A 1.5.
There is a requirement to maintain national air units placed at NATO disposal at a state of readiness commensurate with agreements established under the Partnership Goal process. Emphasis should be placed on standardized status reporting, unit training, and logistics. Strategic commanders must be kept informed of national air forces available to them through Order of Battle – Air (ORBATAIR) messages. National Ministers/Chiefs of Defence should transfer operational/tactical command and/or control to NATO using a Transfer of Authority for Air Force (ORBATTOAAIR) message. National unit commanders should advise superior commanders of the ops situation in the reporting commander's area of concern, his assessment of the overall situation and his intended or recommended actions based on that assessment - the medium for doing so is the Commander's Assessment Report (ASSESSREP). Logistics reporting in accordance with NATO reporting systems and procedures must be undertaken by PfP Officers/NCOs responsible for readiness reporting of logistic assets. Personnel reports must be forwarded from the lowest level to the Joint Task Force – relevant national personnel must be familiar with standard NATO personnel status reports. Written and spoken English to SLP 2222 is required.

EFFECTIVE INTELLIGENCE

STRATEGIC TASKS (ST)

ST 2.0.0
Definition Develop Strategic Intelligence, Surveillance and Reconnaissance
To produce the intelligence required formulating policy, strategy, and military plans and operations and other actions at the strategic level. At the strategic level, the joint and combined intelligence system concentrates on the assimilation and analysis of information, which will lead to the identification, and location of the enemy's strategic centres of gravity (or high-payoff targets affecting the centres of gravity). Successful attack of these centres of gravity will achieve the assigned strategic aims. The strategic intelligence task applies across the range of military operations including the intelligence required to support and execute military operations other than war. This task also includes providing theatre strategic surveillance and reconnaissance and operating and managing the theatre intelligence system.

Supporting
Documentation AJP 2.0, Part 1, Chapter 2

ST 2.1.0
Definition Plan and Direct Strategic Intelligence Activities
To determine strategic intelligence and counterintelligence requirements, issue orders and requests to intelligence and investigative agencies, and continuously reassess the output of these agencies. This task includes reviewing, validating, and prioritising requirements and taskings, as well as monitoring the fulfilment of requirements.

Supporting
Documentation AJP 2.0, Part 1, Chapter 2

ST 2.1.1
Definition Direct the Preparation of NATO's Strategic Collection Plan
To develop a strategic collection plan that will satisfy the strategic intelligence requirements. Collection planning includes assigning the appropriate collection capabilities to fulfilling specific intelligence requirements.

Supporting

AS 2.4.2.3
Definition

Determine Enemy's Theatre Strategic Capabilities and Intentions
To identify, at the theatre strategic level, the enemy (or potential enemy) strengths, weaknesses and intentions. This task addresses both military and non-military capabilities to include identifying the enemy's theatre strategic centres of gravity mobilization potential; military strategic and operational organization (including alliance forces); and dispositions, doctrine, military capabilities, C2 structure, and decision making processes. This evaluation includes continuous refinement of the orders of battle for the entire array of joint and multinational forces available to the enemy commander in the theatre. In military operations other than war, this activity also includes evaluation of developing insurgencies. Important to this task is identifying all theatre strategic courses of action open to the enemy, the relative order of probability of each course of action, and any factors that may influence the enemy to adopt each course of action.

Supporting Documentation

ST 2.4.4
Definition Coordinate Strategic Intelligence Preparation of the Battlespace
Using input from Initiating Directives, CONOPS and OPLANs, this task helps identify, assess and estimate an adversary's Centres of Gravity, critical vulnerabilities, capabilities, limitations, intentions, most likely course of action (COA), and COA most dangerous to

Bi-SCD 80-90

	friendly forces and mission accomplishment. It also supports the formulation of strategy and policy, the decision making process related to force structure, and in times of crisis, supports the conduct of operations.
Supporting Documentation	AJP 2.1, Chapter 1
ST 2.4.5 Definition	Disseminate and Integrate Theatre Strategic Intelligence To provide theatre strategic intelligence, in a timely way, in an appropriate form, and by any suitable means, to the theatre users and to ensure that the intelligence is understood by the commander.
Supporting Documentation	AJP 2.0, Part 1, Chapter 2 AJP 2.1, Chapters 3 and 5
ST 2.4.5.1 Definition	Provide Theatre Strategic Intelligence To take actions within the theatre to ensure the prompt and comprehensive transmission, in peace and war, of produced-produced intelligence products. This task requires the transmission of intelligence products to all organizations and individuals within the theatre having a need to know.
Supporting Documentation	AJP 2.0, Part 1, Chapter 3 AJP 2.1, Chapters 3 and 4
ST 2.4.5.2 Definition	Provide Follow-On Intelligence Support to Theatre Strategic Planners and Decision Makers To participate in theatre strategic planning and execution and to provide intelligence inputs in response to queries based upon furnished intelligence products or the evolution of events.
Supporting Documentation	AJP 2.0, Part 1, Chapter 3 AJP 2.1, Chapters 3 and 5
ST 2.4.6 Definition	Provide Finished Intelligence Products to Strategic Planners and Decision Makers, and Military Commanders in the Theatre To provide all source fused intelligence that has been processed to ensure the comprehensive analysis of the information for planners and decision makers in form appropriate to support planning and course of action development.
Supporting Documentation	AJP 2.0, Part 1, Chapter 3 AJP 2.1, Chapters 3 and 5
ST 2.5.0 Definition	Produce Basic Intelligence for Strategic Planners and Decision Makers. To provide intelligence about the strategic military capabilities of foreign countries and organizations to planners, decision makers

Bi-SCD 80-90

and Commanders. This task includes creating and maintaining databases relating to the military capabilities of current and potential adversaries.

Supporting Documentation AJP 2.0, Part 1, Chapter 2
AJP 2.1, Chapters 3, 4 and 5

ST 2.5.1
Definition Identify Global Risks and Threats
To assess global-level threats to NATO, NATO military forces, and the countries and forces of our multinational partners. This task includes assessing potential issues and situations that could impact NATO's security interests and objectives.

Supporting Documentation AJP 2.0, Part 1, Chapter 2
AJP 2.1, Chapter 2

ST 2.5.2
Definition Analyse Area of Interest
To analyse the nature and characteristics of the area in order to determine the types and scale of operations the theatre will support and the impact of significant regional features including geospatial, cultural and environmental hazards on the conduct of both friendly and enemy's strategies. The analysis includes the impact of strategic limiting factors (for example, rules of engagement) and determination of the commander's area of interest.

Supporting Documentation AJP 2.0, Part 1, Chapter 3
AJP 2.1, Chapters 3 and 5

ST 2.5.3
Definition Determine Enemy's Global Capabilities and Strategic Courses of Action (COA)
To identify, at the national strategic level, the enemy (or potential enemy) strengths, weaknesses and intentions. This task addresses both military and non-military capabilities. Under military capabilities this task examines ground, air, space, naval, CBRN capabilities, military information operations, special operations, and joint capabilities. Non-military capabilities include political and economic actions: additionally non-state actors and terrorist groups must be analysed for their capabilities and probability of executing a planned action against the NATO territory. This task also includes identifying all strategic courses of action open to the enemy, and where sufficient intelligence is available, determining the relative order of probability of each course of action. Any key factors that may influence the enemy to adopt a course of action should be identified. Finally, determine the susceptibility of the vital elements of the enemy's national power to potential actions of another nation. Enemy strategic vulnerabilities may come from political, information, geospatial (e.g., aeronautical, hydrographic, geodetic, topographic),

A-2-14

Bi-SCD 80-90

Supporting Documentation	climatic, economic, scientific, societal, or military factors AJP 2.0, Part 1, Chapter 3 AJP 2.1, Chapters 3 and 5
ST 2.5.3.1 Definition	Determine Enemy's Centres of Gravity To identify, at the national strategic level, the sources of an enemy's power and/or collective will to continue the conflict. In addition to identifying centres of gravity (COG), operations and intelligence planners must recommend the best way to achieve the desired results against the COG.
Supporting Documentation	AJP 2.0, Part 1, Chapter 3 AJP 2.1, Chapters 3 and 5
ST 2.5.3.2 Definition	Assess Strategic Vulnerabilities To determine the susceptibility of vital elements of Alliance or national power to the potential actions of another nation. Strategic vulnerabilities may pertain to political, geographic, climate, economic, scientific, sociological, or military factors. The task includes friendly vulnerability to enemy's strategic deception.
Supporting Documentation	AJP 2.0, Part 1, Chapter 3 AJP 2.1, Chapters 3 and 5
ST 2.5.3.3 Definition	Identify Operational Vulnerabilities To identify enemy's force strengths, vulnerabilities, and centres of gravity. These include friendly forces targeted for C2W, enemy's EW and deception operations (counter-deception), and security weaknesses of friendly forces. This task supports targeting by friendly forces.
Supporting Documentation	AJP 2.0, Part 1, Chapter 3 AJP 2.1, Chapters 3 and 6
ST 2.5.4 Definition	Provide Strategic Indications and Warning To determine changes in a potential enemy's military, political, economic, informational, social, and diplomatic behaviour that could lead to hostile activity. Emphasis is on precluding strategic surprise.
Supporting Documentation	AJP 2.0, Part 1, Chapter 2 AJP 2.1, Chapters 3 and 5
ST 2.5.4.1 Definition	Provide Current Intelligence to Strategic Planners and Decision Makers To report strategic intelligence of immediate value relating to

Bi-SCD 80-90

	particular areas of concern to the Secretary of Defence and strategic planners. This task includes the preparation of intelligence estimates and assessments and periodic intelligence briefings and reports.
Supporting Documentation	AJP 2.0, Part 1, Chapters 2 and 3 AJP 2.1, Chapters 3 and 4
ST 2.5.4.2	Provide Basic Intelligence to Strategic Planners and Decision Makers
Definition	To provide intelligence about the strategic military capabilities of foreign countries and organizations to planners and decision makers. This task includes creating and maintaining databases relating to the military capabilities of current and potential adversaries.
Supporting Documentation	AJP 2.0, Part 1, Chapters 2 and 3 AJP 2.1, Chapters 3 and 4
ST 2.5.4.3	Provide Intelligence for Strategic Targeting
Definition	To provide strategic targeting intelligence to targeting planners. This includes supporting the strategic targeting process as well as target battle damage assessment.
Supporting Documentation	AJP 2.0, Part 1, Chapters 2 and 3 AJP 2.1, Chapters 3 and 4
ST 2.5.4.4	Provide Scientific and Technical Intelligence for Research and Development (R&D) and Force Planning
Definition	To provide intelligence on foreign developments in basic and applied sciences and technology to analysis centres. This includes reporting on the development of foreign strategic weapons systems or efforts to procure such systems.
Supporting Documentation	AJP 2.0, Part 1, Chapters 2 and 3 AJP 2.1, Chapters 3 and 4
ST 2.5.4.5	Disseminate and Integrate Strategic Intelligence
Definition	To integrate strategic-level, time-phased intelligence by combining data from the evaluation of the nature and characteristics of the area and the analysis of the threat to yield the enemy's commander's strategic intentions centres of gravity, and high-payoff targets, such as CBRN weapon production, infrastructure, and delivery systems.
Supporting Documentation	AJP 2.0, Part 1, Chapters 3 AJP 2.1, Chapters 3 and 4

Bi-SCD 80-90

ST 2.5.5 Definition	Prepare and Disseminate Strategic Intelligence Reports To formulate and convey in a timely manner strategic intelligence estimates and reports to users. Estimates and reports cover, among other areas, the threat strategic (and operational) situation, threat intentions, targets (to include high-payoff strategic targets, such as CBRN weapon production, infrastructure, and delivery systems, and enemy's centres of gravity), and friendly vulnerabilities.
Supporting Documentation	AJP 2.0, Part 1, Chapters 3 AJP 2.1, Chapters 3 and 4
ST 2.6.0 Definition	Evaluate Intelligence Activities and Effectiveness To evaluate intelligence operations and to recommend any necessary improvements. The primary factor to be considered is whether or not the user's intelligence requirements being satisfied on time.
Supporting Documentation	AJP 2.0
ST 2.6.1 Definition	Evaluate Effectiveness of NATO's Intelligence Process This task involves the cyclical review of the intelligence cycle as it applies to a particular operation in order to assess the currency and relevance of all products to the Commander's needs.
Supporting Documentation	AJP 2.0

Bi-SCD 80-90

OPERATIONAL TASKS (OT)

OT 2.0.0
Definition Provide Operational Intelligence, Surveillance, and Reconnaissance
To produce the intelligence required to accomplish objectives within a joint operations area (JOA), to include planning and conducting subordinate campaigns and major operations. Operational intelligence includes determining when, where, and in what strength the enemy will stage and conduct campaigns and major operations. This task also includes providing intelligence support for friendly C2W. Operational intelligence addresses the threat across the range of military operations including operations other than war. Operational surveillance and reconnaissance are included in this task. It also includes intelligence support to friendly nations and groups.

Supporting Documentation AJP 2.0, Part 1, Chapters 3 and 4
AJP 2.1, Chapters 3 and 6

OT 2.1.0
Definition Direct Operational Intelligence Activities
To assist joint force commanders in determining their intelligence requirements, then planning the operational collection effort and issuing the necessary orders and requests to intelligence organizations. This task includes reviewing, validating, and prioritising requirements and taskings. Requirements include intelligence for HNs or groups in supporting military operations other than war and warfighting operations.

Supporting Documentation AJP 2.0, Part 1, Chapters 3 and 4
AJP 2.1, Chapters 3 and 6

OT 2.1.1
Definition Provide Theatre Current Intelligence
To report theatre strategic intelligence of immediate value relating to the theatre. This task includes the preparation of intelligence estimates and assessments and periodic intelligence briefings and reports.

Supporting Documentation AJP 2.0, Part 1, Chapter 2
AJP 2.1, Chapters 3 and 5

OT 2.1.2
Definition Provide Theatre Basic Intelligence
To report intelligence relating to the theatre strategic military capabilities of foreign countries and organizations. This task includes creating and maintaining databases relating to the military capabilities of current and potential adversaries.

Supporting Documentation AJP 2.0, Part 1, Chapter 2
AJP 2.1, Chapters 3 and 5

Bi-SCD 80-90

OT 2.1.3 Definition	Identify And Prioritise Operational Intelligence Requirements To assist joint force commanders in determining and prioritising their priority intelligence requirements. In military operations other than war, it includes helping and training HNs to determine their intelligence requirements, such as in a counterinsurgency. To determine and prioritise the implicit and explicit intelligence requirements of the planners, operators and decision makers.
Supporting Documentation	AJP 2.0, Part 1, Chapters 3 and 4 AJP 2.1, Chapters 3 and 6
OT 2.1.4 Definition	Identify and Prioritise Operational Information Requirements (IR) To identify those items of information that must be collected and processed to develop the intelligence required by the commander's PIR.
Supporting Documentation	AJP 2.0, Part 1, Chapters 3 and 4 AJP 2.1, Chapters 3 and 6
OT 2.1.4.1 Definition	Establish Commander's Critical Information Requirements (CCIR) To identify the operational commander's critical information needs for a pending operation.
Supporting Documentation	AJP 2.0, Part 1, Chapters 3 and 4 AJP 2.1, Chapters 3 and 6
OT 2.1.4.2 Definition	Prepare and Issue Essential Elements of Friendly Information (EEFI) To prepare and provide to elements of the Joint Force and superior headquarters the critical items of information regarding the enemy's and the environment in the area of operations needed by the commander by a particular time to relate with other available information and intelligence in order to assist in reaching a logical decision.
Supporting Documentation	AJP 2.0, Part 1, Chapters 3 and 4 AJP 2.1, Chapters 3 and 6
OT 2.1.5 Definition	Develop Multinational Intelligence / Information Sharing Structure This task involves completing an operational architecture that is capable of accommodating the widest possible range of missions and operational scenarios. This structure must respond to the Commander's requirements for information at any time and any place and be capable of supporting multinational operations with no loss in timeliness. In addition it must achieve a seamless integration of the Commander's decision-making and execution cycles with all

A-2-19

Bi-SCD 80-90

Supporting Documentation	phases of the intelligence cycle. AJP 2.1, Chap 6 Section 621
OT 2.1.6 Definition	Develop and Implement Operational Intelligence Collection Plan To determine if there are any gaps in intelligence from the strategic to the tactical level and address essential elements of information in a plan for collecting the intelligence.
Supporting Documentation	AJP 2.0, Part 1, Chapters 3 and 4 AJP 2.1, Chapters 3 and 6
OT 2.1.6.1 Definition	Allocate Intelligence Resources in the Joint Operations Area (JOA) To assign adequate resources to theatre and JTF intelligence organizations to permit the accomplishment of assigned intelligence tasks. This task includes requesting support and the reallocation of additional assets from national intelligence agencies and from allied countries.
Supporting Documentation	AJP 2.0, Part 1, Chapters 3 and 4 AJP 2.1, Chapters 3 and 6
OT 2.1.7 Definition	Issue Request for Collection and Production To request the collection and production of information of various intelligence collection means within the force and from organizations at higher echelons including national intelligence sources.
Supporting Documentation	AJP 2.0, Part 1, Chapters 3 and 4 AJP 2.1, Chapters 3 and 6
OT 2.1.8 Definition	Integrate Operational Counterintelligence Requirements To gather information and conduct activities to protect against terrorism, espionage, other intelligence activities, sabotage, or assassinations conducted by or on behalf of opposing governments or elements thereof, organizations, persons, or international terrorist activities in the operational area.
Supporting Documentation	AJP 2.0, Part 2, Chapters 3 and 4 AJP 2.1, Chapters 3 and 6
OT 2.1.9 Definition	Integrate Operational Counterintelligence Process This task ensures that formation and unit commanders and agency heads assisted by security staffs and counter-intelligence personnel are responsible for maintaining security in accordance with NATO

Bi-SCD 80-90

Supporting Documentation policy and with national regulations.
AJP 2.0, Part 2, Chapters 3 and 4
AJP 2.1, Chapters 3 and 6

OT 2.1.10 Definition Develop Multinational Intelligence/Information Sharing Structure
To optimise each member nation's intelligence and information capabilities, incorporate and exploit those capabilities, determine what information may be shared with multinational partners, and to provide member forces a common intelligence picture tailored to their requirements and consistent with disclosure policies of member nations.

Supporting Documentation MG-06 Para 9 and 12.

OT 2.2.0 Definition Collect and Share Operational Information
To gather information from operational and tactical sources on operational and tactical threat forces and their decisive points (and related high-payoff targets such as CBRN weapon production, infrastructure and delivery systems). It also includes collection of information on the nature and characteristics of the operational area (including area of interest). Locating and reporting captured or isolated personnel falls under this task, as well as collection of data to support combat assessment. The sharing of collected information within the multi-Service and Allied Nations' and Partners' intelligence communities can consolidate return of information, promote fusion, and prevent retasking of scarce assets. This task applies in peace and war and those military operations other than war.

Supporting Documentation AJP 2.0, Part 1, Chapters 3 and 4
AJP 2.1, Chapters 3 and 6

OT 2.2.1 Definition Collect Information on Enemy's Operational Situation and Hazards
To obtain information on enemy's (and friendly) operational force vulnerabilities, threat operational doctrine and forces (land, maritime, and air), dispositions and order of battle, and the nature and characteristics of the operational areas including significant hazards, such as CBRN contamination of large areas and health hazards. This activity includes collecting counterintelligence information.

Supporting Documentation AJP 2.0, Part 1, Chapters 3 and 4
AJP 2.1, Chapters 3 and 6

OT 2.2.2 Collect Situational Information on Neutral Forces
A-2-21

Bi-SCD 80-90

Definition To continuously analyse any neutral forces' enemy mobilization potential, military-strategic and operational organization, dispositions, doctrine, C2 structure, and decision-making processes, as well as their enemy vulnerabilities. This evaluation includes continuous refinement of the order of battle for the entire array of forces available to any neutral forces' enemy operational commander; their military leadership, history of performance, the doctrine for employment of operational forces, and threat associated with military operations other than war. Assessment of enemy neutral C2W capabilities is included here.

Supporting Documentation AJP 2.0, Part 1, Chapters 3 and 4
AJP 2.1, Chapters 3 and 6

OT 2.2.3 Definition Collect Information on Operational Targets
To obtain information that supports the detection, identification, and location of enemy's strategic or operational centres of gravity and high value targets. This task includes distinguishing enemy's target information from friendly forces and assessing damage to operational targets. This task includes targeting (that is, the locating, tracking and reporting) of isolated or captured friendly personnel.

Supporting Documentation AJP 2.0, Part 1, Chapters 3 and 4
AJP 2.1, Chapters 3 and 6

OT 2.2.4 Definition Provide Operational Reconnaissance and Surveillance
To provide for obtaining by, visual observation or other detection methods, information about the activities of an enemy's to potential enemy's or area. Further, through surveillance (visual, aural, electronic, photographic, or other means) to provide for the systematic observation of surface or subsurface operational areas, places, persons, or things.

Supporting Documentation AJP 2.0, Part 1, Chapters 3 and 4
AJP 2.1, Chapters 3 and 6

OT 2.2.5 Definition Collect Environmental Information
Arrange for and collect the basic meteorological and oceanographic information produced by national Military Forecast Centres (MFC) and Military Oceanographic Information Centres (MOIC) and use it to produce tailored forecasts and impact statements for the operational support to the Commander. It includes the planning and conducting of Maritime Rapid Environmental Assessment (REA) operations and the delivery of the Recognized Environmental Picture (REP).

Supporting AWP 2

Bi-SCD 80-90

Documentation ATP 32
 Bi-SC 80-30 Directive

OT 2.2.6 Coordinate ISTAR Support
Definition Within the ISTAR concept, operational level intelligence operations produce the intelligence required to accomplish strategic objectives within theatres and/or JOAs, to include support to planning and execution of subordinate campaigns and major operations.

Supporting
Documentation AJP 2.1, Chapters 6

OT 2.2.7 Collect Operational Information
Definition To gather information from Allied and multinational sources to satisfy the intelligence requirements of the planners, operators and decision makers.

Supporting
Documentation MG-06 Para 9 and 12.

OT 2.2.8 Gain and Maintain a robust Recognized Maritime Picture (RMP) in the JOA
Definition To manage a geographic presentation of processed all source contact and information data known at a given time.

Supporting
Documentation AC/259-D(2006)0050

OT 2.2.9 Identify, validate and provide for geospatial requirements for the theatre
Definition This task includes all processes required to ensure the timely provision of Geospatial support and services to decision-making, planning and conduct of operations and training of assigned forces. It includes policy, identification and validation of requirements, procurement or production of Geo-data for any area of theatre interest. It implies substantial cooperation with higher HQs. Outputs from this task will support the Targeting process.

Supporting
Documentation MC 296

OT 2.3.0 Process and Exploit Collected Operational Information
Definition To convert collected operational information into forms that can be readily used by intelligence analysts during production. Process, fuse and analyze collected intelligence.

A-2-23

Bi-SCD 80-90

Supporting AJP 2.0, Part 1, Chapters 3 and 4
Documentation AJP 2.1, Chapters 3 and 6

OT 2.3.1 Conduct Technical Processing and Exploitation in the Joint
Operations Area (JOA)
Definition To perform activities such as imagery development and
interpretation, document translation, data conversion, technical
analysis of captured enemy material, and decryption of encoded
material.
Supporting AJP 2.0, Part 1, Chapters 3 and 4
Documentation AJP 2.1, Chapters 3 and 6

OT 2.3.2 Collate Information
Definition To identify and group together related items of information for
critical comparison.
Supporting AJP 2.0, Part 1, Chapters 3 and 4
Documentation AJP 2.1, Chapters 3 and 6

OT 2.3.3 Correlate Information
Definition To associate and combine data on a single subject to improve the
reliability or credibility of the information.
Supporting AJP 2.0, Part 1, Chapters 3 and 4
Documentation AJP 2.1, Chapters 3 and 6

OT 2.4.0 Produce Operational Intelligence and Prepare Intelligence Products
Definition To convert processed and exploited information into intelligence
that satisfies the joint operations area (JOA) commander's PIRs,
intelligence preparation of the battlespace (IPB), and other
intelligence requirements.
Supporting AJP 2.0, Part 1, Chapters 3 and 4
Documentation AJP 2.1, Chapters 3 and 6

OT 2.4.1 Evaluate, Integrate, Analyse, and Interpret Operational Information
Definition To appraise information for credibility, reliability, pertinence, and
accuracy (Evaluate). It includes forming patterns through the
selection and combination of processed information. It involves
integrating strategic, operational, and tactical information
(Integrate). This task further includes reviewing information to
identify significant facts for subsequent interpretation (Analyse).
Finally, the task is to judge the significance of information in relation
to the current operational situation and other related knowledge
(Interpret).

Bi-SCD 80-90

Supporting AJP 2.0, Part 1, Chapters 3 and 4
Documentation AJP 2.1, Chapters 3 and 6

OT 2.4.1.1 Identify Operational Issues and Threats
Definition To assess threats to NATO and its military forces, and the countries and forces of multinational partners. This task includes assessing potential issues and situations that could impact Alliance security interests and objectives within the joint operations area. This task includes analysing the nature and characteristics of the theatre to determine the types and scale of operations the theatre will support and the impact of significant regional features and hazards on the conduct of both friendly and enemy campaigns or joint operations. The analysis includes the impact of limiting factors (for example, geospatial, cultural, environmental and rules of engagement) and determination of the geographic combatant commander or CJTF area of interest. This task also includes analysing significant alterations to the theatre of war that create strategic hazards (such as CBRN contamination). Finally, it includes an analysis of opportunities for obtaining local resources, facilities, and support in the area of operations and ways of minimizing interference with military operations

Supporting AJP 2.0, Part 1, Chapters 3 and 4
Documentation AJP 2.1, Chapters 3 and 6

OT 2.4.1.2 Determine Enemy's Operational Capabilities, Course of Action, and Intentions
Definition To identify, at the operational level, the enemy's strengths, weaknesses and intentions. This task addresses both military and non-military capabilities. It also includes identifying the enemy's operational centres of gravity. Further, this task addresses the enemy's mobilization potential; operational organization (including alliance forces); and dispositions, doctrine, military capabilities, C2 structure, and decision making processes. This evaluation includes continuous refinement of the orders of battle for the entire array of joint and multinational forces available to the enemy commanders in the area of operations. Also included are the personalities and history of performance of key leaders, determination of who has CBRN weapon release authority and the doctrine for employment of forces at the operational level. In military operations other than war, this activity also includes evaluation of developing insurgencies. Assessment of enemy IO capabilities is included here, as well as identifying all operational courses of action open to the enemy. When sufficient intelligence is available, this task determines the relative order of probability of each course of action, including any factors that may influence the enemy to adopt each course of

A-2-25

Bi-SCD 80-90

	action. Finally, this task involves assessing the susceptibility of vital elements of the enemy's operational military power to the potential actions of the joint force. This task should, among other results, include the creation of intelligence preparation of the battlespace products for the operational area. These products should include developing templates and reports to assist theatre intelligence and targeting organizations in determining, tracking, monitoring, and targeting operational critical target sets, and their associated infrastructure.
Supporting Documentation	AJP 2.0, Part 1, Chapters 3 and 4 AJP 2.1, Chapters 3 and 6
OT 2.4.1.3 Definition	Identify Friendly/Enemy/Neutral Centres of Gravity Identify physical, operational, cultural, political/diplomatic, economic, and organizational centres of gravity for friendly, enemy, and neutral forces, including, as appropriate, IOs/NGOs.
Supporting Documentation	AJP 2.0, Part 1, Chapters 3 and 4 AJP 2.1, Chapters 3 and 6
OT 2.4.2 Definition	Prepare Intelligence for the JOA To prepare intelligence and present them to planners, decision makers and commanders, as well as other intelligence personnel, in a finished state.
Supporting Documentation	AJP 2.0, Part 1, Chapters 3 and 4 AJP 2.1, Chapters 3 and 6
OT 2.4.2.1 Definition	Provide Indications and Warning for the JOA To report time-sensitive intelligence on foreign developments that could threaten the Allied Nations, their citizens abroad, or allied military, political, or economic interests. This task also includes identifying hostile reactions to NATO reconnaissance activities and indications of impending terrorist attacks.
Supporting Documentation	AJP 2.0, Part 1, Chapters 3 and 4 AJP 2.1, Chapters 3, 4 and 6
OT 2.4.2.2 Definition	Provide Current Intelligence For the JOA To report operational intelligence of immediate value relating to the joint operations area. This task includes the preparation of intelligence estimates and assessments and periodic intelligence briefings and reports.
Supporting Documentation	AJP 2.0, Part 1, Chapters 3 and 4 AJP 2.1, Chapters 3, 4 and 6

Bi-SCD 80-90

OT 2.4.2.3 Definition	Provide Basic Intelligence for the JOA To report intelligence relating to the operational military capabilities of enemy forces. This task includes creating and maintaining databases relating to the military capabilities of current and potential adversaries.
Supporting Documentation	AJP 2.0, Part 1, Chapters 3 and 4 AJP 2.1, Chapters 3, 4 and 6

OT 2.4.2.4 Definition	Provide Target Intelligence for the JOA To report intelligence of operational targeting value. This includes supporting the operational targeting process and providing data to support offensive IO.
Supporting Documentation	AJP 2.0, Part 1, Chapters 3 and 4 AJP 2.1, Chapters 3, 4 and 6

OT 2.4.2.4.1 Definition	Process Targeting Data This task involves the strategic HQ receiving Indications and Warnings (I&W) from NATO HQ. Following analysis, the specific factors relevant to the JOA will then be passed to the appropriate JFC for use in the JOA. Modalities for sharing and further passage of this information are in place so that the Intelligence assets will provide I&W support as and when needed. This task involves establishing the joint targeting process within a suitable framework organisation suited to the task, and ensuring that this organisation develops all the necessary targets for the campaign. Further tasks involve establishing, among others, a Joint Co-ordination Board (JCB) to oversee campaign synchronisation and the targeting process and to provide a forum for Component Commanders' (CCs') representatives to resolve confliction issues, a Joint Targeting Working Group (JTWG) to manage the joint targeting process and a Time Sensitive Targets (TST) cell for rapid execution of TST at the HQ best suited to the task. Additional corollary tasks are detailed in the Reference.
Supporting Documentation	AD 80-70, Chapter 2 paragraph 9

OT 2.4.2.5 Definition	Conduct Joint Intelligence Preparation of Battlespace This task supports a continuous process that enables JFCs and their staffs to visualise the full spectrum of adversary capabilities and potential Courses of Action (COA) across all the dimensions of the battlespace. It facilitates campaign planning and the development of friendly COAs and also provides the basis for intelligence direction and synchronisation.

TACTICAL TASKS (TT)

TT 2.0.0	Develop Tactical Intelligence
Definition	To develop that intelligence that is required for planning and conducting tactical operations. This is done by analysing the enemy's capabilities, intentions, vulnerabilities, and the environment (to include weather and the application of tactical decision aids and weather effects matrices on friendly and enemy systems, and terrain). This task includes the development of counterintelligence information.
Supporting Documentation	AJP 2.0, Part 1, Chapters 3 and 4 AJP 2.1, Chapters 3 and 7
TT 2.1.0	Develop & Analyse Tactical Intelligence Activities and Requirements
Definition	To determine and rank intelligence requirements for the collection and processing of information in developing tactical intelligence. In military operations other than war, this task also pertains to support for host nations or groups in determining their tactical intelligence requirements. This task includes integrating tactical and operational intelligence requirements, including reconnaissance and surveillance requirements.
Supporting Documentation	AJP 2.0, Part 1, Chapters 3 and 4 AJP 2.1, Chapters 3 and 7
TT 2.1.1	Develop Multinational Intelligence/Information Sharing Structure
Definition	To optimise each member nation's intelligence and information capabilities, incorporate and exploit those capabilities, determine what information may be shared with multinational partners, and to provide member forces a common intelligence picture tailored to their requirements and consistent with disclosure policies of member nations.
Supporting Documentation	
TT 2.1.2	Conduct Counter Intelligence
Definition	To provide the means and implement the procedures to a force or HQ to detect and counter intelligence gathering by an enemy.
Supporting Documentation	AD 65-3 CIPACE
TT 2.1.3	Establish Commanders Critical Information Requirements (CCIR)
Definition	This task involves participation in the Mission Analysis; wherein the

A-2-31

Bi-SCD 80-90

Commander will have stated his information requirements (IRs) at all levels. CCIRs pertain usually to the adversary or the Battlespace and are one element of the information that the Commander needs to continue developing his plan. Of note, a certain portion of the CCIRs will usually be developed into PIRs.

TT 2.1.5
Definition

State Information Requirements
This task involves participation in the Mission Analysis; wherein the Commander will have stated his information requirements (IRs) at all levels. These IRs are the initial sets of information that the Commander required to continue plan development.

Supporting
Documentation

AJP 2.1, Chap 7

TT 2.1.6
Definition

Review Intelligence Requirements
Once stated, the CCIRs will be further refined and a series of them will be developed into Priority Intelligence Requirements (PIR)

Supporting
Documentation

AJP 2.1, Chap 7

TT 2.1.7
Definition

Develop and Prioritise Intelligence Requirements (PIR)
To determine and prioritise the implicit and explicit intelligence requirements of the planners, operators and decision makers.

Supporting
Documentation

AJP 2.1, Chapters 3 and 7

TT 2.2.0
Definition

Collect Information
To obtain information on the situation, both enemy and friendly, and on potential targets using all means available.

Supporting
Documentation

AJP 2.0, Part 1, Chapters 3 and 4
AJP 2.1, Chapters 3 and 7

Bi-SCD 80-90

TT 2.2.1	Collect Situational & Capability Information on Neutral and Friendly Forces
Definition	To obtain information that affects a commander's possible courses of action. Considerations include the characteristics of the area of operations and the enemy's situation. Information includes threat, physical environment, health standards/endemic disease, and social/political/economic factors. This task also includes the reporting and locating of isolated or captured personnel.
Supporting Documentation	AJP 2.0, Part 1, Chapters 3 and 4 AJP 2.1, Chapters 3 and 7
TT 2.2.2	Collect Information on Enemy Forces & Targets
Definition	To acquire information that supports the detection, identification, and location of enemy's targets in sufficient detail to permit attack by friendly weapons. Activities include searching, detecting, locating, and identifying targets and conducting post-attack battle damage assessment.
Supporting Documentation	AJP 2.0, Part 1, Chapters 3 and 4 AJP 2.1, Chapters 3 and 7
TT 2.2.3	Perform Tactical Reconnaissance and Surveillance
Definition	To obtain, by visual observation or other detection methods, information about the activities of an enemy's or potential enemy's or tactical area of operations. This task uses surveillance to systematically observe the area of operations by visual, aural, electronic, photographic, or other means.
Supporting Documentation	AJP 2.0, Part 1, Chapters 3 and 4 AJP 2.1, Chapters 3 and 7
TT 2.2.4	Obtain and Access Intelligence Information
Definition	This task is similar to 2.2.7, but it involves the use of many other sensors and sources. SIGINT, IMINT, MASINT and HUMINT are some examples of this process. Intelligence personnel collect data principally for analysis, processing and exploitation.
Supporting Documentation	AJP 2.1, Chap 7
TT 2.2.5	Collect Environmental Information
Definition	As part of the Battlespace, environmental information will also be collected and will be processed into intelligence as part of the Commander's plan. This may also occur as part of the IPB

A-2-33

Bi-SCD 80-90

process. Collect field observations of meteorological and oceanographic variables to be used to assess the impact on platforms, weapons and sensors, as well as inputs to forecasting models.

Documentation

AWP 2
ATP 32

TT 2.2.6
Definition

Collect Combat Identification Information

Combat identification (CID) is the process of attaining an accurate characterization of unknown detected objects to the extent that high confidence and timely application of military options and weapon resources can occur. Depending on the situation and the operational decisions that must be made, this characterization may be limited to, "friend," "enemy," or "neutral." In other situations, other characterizations may be required including, but not limited to class, type, nationality and mission configuration. CID characterizations, when applied with combatant commander's Rules of Engagement (ROE), enable engagement decisions and the subsequent use, or prohibition of use, of lethal and non-lethal weaponry to accomplish military objectives. CID is used for force posturing, command and control, situational awareness as well as shoot, no-shoot employment decisions.

Evaluate Social / Cultural / Political / Economic / Health

A-2-35

Bi-SCD 80-90

	Environment
Definition	To evaluate the social/cultural/political/economic/health environment and medical threat to determine opportunities for obtaining local resources, facilities, and support in an area of operations, thereby minimizing interference with military operations, and supplementing the intelligence effort. This task also assesses the impacts of these factors on the military operation.
Supporting Documentation	AJP 2.0, Part 1, Chapters 3 and 4 AJP 2.1, Chapters 3 and 7
TT 2.3.6	Integrate Intelligence Information
Definition	To combine and analyse combat information, pre-processed information, and intelligence database information in order to project significant events and enemy's activities, to predict the enemy's intentions, and to develop targeting data and enemy orders of battle.
Supporting Documentation	AJP 2.0, Part 1, Chapters 3 and 4 AJP 2.1, Chapters 3 and 7
TT 2.3.7	Process Tactical Warning Information and Attack Assessment
Definition	Send and receive near real time tactical intelligence including indications and warnings to and from tactical forces of air, ground, and naval threats. A tactical warning is a warning after initiation of a threatening or hostile act based on an evaluation of information from all available sources. Attack assessment is an evaluation of information to determine the potential or actual nature and objectives of an attack for the purpose of providing information for timely decisions.
Supporting Documentation	AJP 2.0, Part 1, Chapters 3 and 4 AJP 2.1, Chapters 3 and 7
TT 2.3.8	Conduct Tactical Combat Assessments
Definition	This task involves tactical units carrying out SOP actions to assess munitions effectiveness in a given targeting situation, preparing re-attack recommendations and conducting battle damage assessments of targets they have struck. The resulting information set is passed up the chain of command in a specific and structured format, thereby enabling higher Commanders to create a prioritised targeting plan in support of the campaign.
Supporting Documentation	AD 80-70 Annex J
TT 2.4.0	Prepare and Disseminate Intelligence Reports

A-2-36

Bi-SCD 80-90

Definition To develop, produce, and convey standard reports and intelligence preparation of the operations area products for the commander to use to report intelligence or information. To produce and disseminate operational intelligence in the format most useful to the planners, operators and decision makers.

Supporting AJP 2.0, Part 1, Chapters 3 and 4
Documentation AJP 2.1, Chapters 3 and 7

TT 2.4.1
Definition Prepare Intelligence Reports and Estimates
To describe intelligence with respect to targets, their location (grid or geographic coordinates and target location error, and a loiter or "good until" time for time-critical targets. This task also involves describing the enemy's aim or design, influence of the area of operations on enemy courses of action, and the capabilities of the enemy.

Supporting AJP 2.0, Part 1, Chapters 3 and 4
Documentation AJP 2.1, Chapters 3 and 7

TT 2.4.2

DEPLOYABILITY AND MOBILITY

STRATEGIC TASKS (ST)

ST 3.0.0 **Provide Strategic Deployability and Mobility**
Definition To deploy, shift, regroup or move combined joint operational formations into or around an area of operations. To dispose joint and/or multinational forces, conventional forces, and special operations forces (SOF) to impact the conduct of a campaign or major operation to achieve strategic results. This activity includes moving or deploying forces for strategic advantage into or around a joint operations area and conducting manoeuvre to strategic depths (for offensive or defensive purposes). It also includes enhancing the mobility of friendly forces and controlling battlespace on land, on and under sea, in air, or in space. The purpose of this task is to move Operational formations composed of tactical forces to achieve strategic objectives.

Supporting AJP 1.0
Documentation AJP 3.0
Guidelines For Operational Planning (GOP)

ST 3.1.0 **Plan Strategic Movement**
Definition The relocation of forces to desired theatres and their return in accordance with Alliance strategy and plans. This task focuses on the movement of forces and resources from a point of origin to a specific operational area by means of established multi-national, joint logistics command elements, which provide effectual advantage of resource pooling, centralized coordination and control, and an integrated support structure. Strategic deployment and redeployment encompasses movements from point of origin through destination, including intermediate locations, specifically, inter-theatre, and intra-theatre to create a relative strategic advantage, to control the politico-military situation, and to execute a theatre campaign for achieving Alliance policy and objectives. Forces include air, land, and maritime forces, as well as, special operations forces. Strategic deployment and redeployment takes into account inter/intra-theatre distances, available time, deployment assets, SPODs (Sea Ports of Debarkation) / APODs (Air Ports of Debarkation), Land LOCs (Land Lines of Communication). Strategic deployment

Bi-SCD 80-90

includes relocation of forces, equipment, and supplies to a theatre from, or from one theatre to another, for subsequent reception, staging, onward movement, and integration (RSOI). This task applies to mobilization and non-mobilization situations.

Supporting
Documentation

ST 3.2.0
Definition

Plan and Conduct Deployment and Redeployment
To move forces and cargo in accordance with JOA strategic requirements and in conformance with the supported commander's concept of operations. This may be included in an OPLAN, CONPLAN, or OPORD. To facilitate this requirement, plan and coordinate, with Troop Contributing Nations (TCNs) and Host Nations (HNs), movement of forces and cargo in accordance with Alliance strategic requirements and in conformance with approved operational plans or other planning documents. This task includes the facilitation of this movement without delays due to strategically significant terrain or maritime location. Strategic deployment to the Area of Operations (AOO) and the provision of the necessary assets for deployment, sustainment and redeployment is a national responsibility till transfer of authority (TOA). The prioritisation, coordination and de-confliction of movements take place at Strategic Command (SC) level.

Supporting
Documentation

MC 133/3
Bi-SC Guidelines for Operational Planning.
AJP 1.0

ST 3.2.1
Definition

Determine Transportation, Infrastructure and Resources
To identify demands on national, and/or contracted-commercial lift assets and en route support required to move forces to and from theatres in support of Alliance military theatre strategies, operation plans, and regional needs. Closer inter/intratheatre distances will ease the demand and dependence on scarce assets, thus making the deployment relatively safer (force protection), faster (closure times) and easier (less complicated planning, more affordable resources, possible reach-back capabilities).

Supporting
Documentation

MC 400/2

ST 3.2.2
Definition

Determine Available Transportation and support availability
To examine installation-loading capability, port throughput,

A-3-2

Bi-SCD 80-90

	transit times, over-flight and landing rights, en route support facilities, and critical common-user lift asset availability.
Supporting Documentation	MC 400/2
ST 3.2.3	Coordinate, Deconflict and Match Transportation Resources and Requirements
Definition	To compare deployment requirements against the actual strategic lift assets available. If a change in the allocation is required, request additional assets from the appropriate authority.
Supporting Documentation	MC 400/2
ST 3.2.4	Estimate and Determine Possible Closure Times
Definition	To determine the arrival date for units, passengers, or cargo at POEs or determine the arrival date at theater destinations from POD. Service or Service components provide estimates of the ability of their assets (units, contracted capability) and resources (materiel handling equipment, facilities, fuel, etc.) to transport units, passengers, and cargo to the POE or from the POD.
Supporting Documentation	MC 400/2
ST 3.2.5	Determine Impact of environmental conditions on Deployment
Definition	To identify environmental conditions (these include, but are not limited to, weather, oceanic conditions, and the space environment) that may delay, divert, change, or cancel strategic airlift/sealift. Recommend changes in transportation modes, assets, or routing to minimize impact or exploit favorable conditions to enhance mission success.
Supporting Documentation	MC 400/2
ST 3.2.6	Determine the Impact of Threat Activity on Deployment
Definition	To examine potential and actual threats at departure and arrival locations and en route (along lines of communications), including possible use of nuclear, biological, and chemical weapons and determine necessary changes to operations.
Supporting Documentation	MC 400/2

Bi-SCD 80-90

ST 3.2.7	Integrate Deployment Systems
Definition	To manage the employment of common-user and organic lift assets of deploying forces through Allied Movement Coordination Centre (AMCC), movement control and ADP systems. While execution is decentralized, centralized integration permits worldwide strategic mobility operations. The AMCC, which will provide visibility to all users, integrates data from transportation and logistics, automated information systems for mission area applications.
Supporting Documentation	MC 400/2
ST 3.2.8	Plan, Coordinate and Provide Forces and Mobility Assets
Definition	To provide the transportation assets (e.g., road, rail, sealift, and airlift) required in an operational configuration for the movement of forces and cargo. Mobility assets involve military and commercial means that includes assets from Allied nations and partners, where applicable.
Supporting Documentation	MC 133/3 Bi-SC Guidelines for Operational Planning. AJP 1.0
ST 3.2.9	Plan, Coordinate and Conduct Terminal Operations
Definition	To centralize and oversee reception, processing, and staging of passengers; receipt, transit storage, and marshalling of cargo; loading and unloading of ships or aircraft; and manifesting and forwarding of cargo and passengers to destination.
Supporting Documentation	MC 400/2
ST 3.2.10	Plan and Coordinate Movement to POE and Port Support Services
Definition	To coordinate movement of forces, individuals, and equipment / supplies from origin installation, or mobilization station if used, to marshalling area and then to ports of embarkation (POE). This coordination requires close monitoring of movement of participation elements (to move forces, individuals, and equipment/supplies from origin installation, or mobilization station if used, to marshalling area and then to POE)
Supporting Documentation	MC 400/2

Bi-SCD 80-90

ST 3.2.11	Plan and Coordinate Movement of Forces from POE to POD
Definition	To coordinate movement of forces by air and maritime strategic mobility assets to Ports of Debarkation or Amphibious Operating Area (POD or AOA) in Theatre.
Supporting Documentation	MC 133/3 Bi-SC Guidelines for Operational Planning. AJP 1.0
ST 3.2.12	Establish and Oversee Reception Staging, Onward Movement and Integration (RSOI) Services
Definition	To provide for air and seaport reception services in theatres and provides onward movement to holding and staging areas. To coordinate the reception, staging, onward movement, and integration of units, personnel, equipment and materiel in theatre and to process them and move them to the point at which they are transferred to the responsible operational commander, available for battle. This task includes bed down activities at airfields, ports, and joint logistics over-the-shore (JLOTS) and in-transit visibility (ITV).
Supporting Documentation	MC 400/2
ST 3.2.13	Process Movement Requirements
Definition	To review and approve a request from a subordinate commander for forces from outside the subordinate commander's area of operations into the subordinate commander's area.
Supporting Documentation	AJP 1.0
ST 3.2.13.1	Coordinate and Monitor Theatre RSOI
Definition	To coordinate the reception, staging, onward movement, and integration of units, personnel, equipment and materiel in theatre and to process them and move them to the point at which they are transferred to the responsible operational commander, available for battle. This task includes bed down activities at airfields, ports, and joint logistics over-the-shore (JLOTS) and in-transit visibility (ITV).
Supporting Documentation	AJP 1.0

Bi-SCD 80-90

ST 3.2.13.2	Plan and Provide Theatre Strategic Reception
Definition	To provide air, ground and seaport reception in theaters. This task applies to both single user ports of discharge and common-user ports. Reception must be coordinated with the combatant commander who has overall JRSOI responsibility. Reception can be provided by a Service component, USTRANSCOM, a host nation, or a contractor. Reception also includes documenting necessary information to provide in-transit visibility. This task includes offloading of aircraft, rail cars, and ships, including discharge at pier side and in stream (to include JLOTS).
Supporting Documentation	AJP 1.0
ST 3.2.13.3	Plan and Provide Theatre Strategic Staging
Definition	To clear ports, combine personnel and equipment in a controlled area, and prepare for onward movement. It also includes materiel segregation, scheduling for movement and preparation for transport. This task includes port services in the JOA.
Supporting Documentation	MC 133/3 Bi-SC Guidelines for Operational Planning. AJP 1.0
ST 3.2.13.4	Plan and Provide Onward Movement in the Theatre
Definition	To flow forces from PODs/staging areas to their final destinations by highway (common-user or convoy), rail, watercraft, or fly away. This task also includes transitioning command and control of units and personnel during onward movement and providing in-transit visibility (ITV) data.
Supporting Documentation	MC 133/3 Bi-SC Guidelines for Operational Planning. AJP 1.0
ST 3.2.13.5	Plan and Provide Theatre Strategic Integration of Deploying Forces
Definition	To conduct seamless flow between phases and the synchronized hand-off of mission capable units into an operational commander's force prior to mission execution.
Supporting Documentation	MC 133/3 Bi-SC Guidelines for Operational Planning. AJP 1.0

Bi-SCD 80-90

- ST 3.2.14 Support Intra-theatre Deployment of Forces
Definition To deploy or move a joint or multinational force by any means or mode of transportation from its position within the theatre to another position within the JOA in support of the CJTF plan.
- Supporting
Documentation MC 400/2
-
- ST 3.2.15 Support and coordinate Redeployment or Retrograde of Personnel and Equipment from Theatre
Definition To support and coordinate redeployment of Allied and other designated personnel and equipment from theater of operations/joint operations areas, often using the retrograde capacity of mobility assets during strategic deployment operations.
- Supporting MC 133/3
Documentation Bi-SC Guidelines for Operational Planning.
AJP 1.0
-
- ST 3.2.16 Coordinate Intra-theatre Refuelling
Definition To coordinate and to ensure refueling for the deployment or strategic employment of air, land, and sea forces within a theatre. Refueling will allow forces to reach their destination without dependence on non-allied and/or non-partner nations while in-transit.
- Supporting
Documentation AJP 1.0
-
- ST 3.2.17 Plan, Coordinate and Provide Patient Movement and Evacuation
Definition To provide evacuation and control of patient movement. This task includes the evacuation of combat casualties from theatre of operations/JOA and movement of ill or injured patients within theatre, between theatres or between the theatre and Allied Countries and Partners.
- Supporting
Documentation MC 400/2
-
- ST 3.2.18 Deploy Or Re-deploy Units (*) G 2.1
Definition Deployment or re-deployment of units into a reception or assembly area in the theatre of operations is a national responsibility. NATO authorities will act as co-ordinating authority. The task may include transport by sea, air, or rail, SPOD/APOD operations and Reception, Staging and Onward

A-3-7

Bi-SCD 80-90

	Movement activities. This task is normally performed by a combination of staff cells with the logistics movement cell normally taking the lead. Therefore, national logistics staffs should be familiar with joint movement doctrine and trained in the use of ADAMS, the NATO automated information system that supports movement planning.
Supporting Documentation	STANAG 2926 STANAG 2927 STANAG 3146 STANAG 3465 STANAG 3466 STANAG 3467 STANAG 3854 AJP 4.4
ST 3.2.18.1 Definition	Prepare Personnel Prior To Deployment (*) G 8.1 Preparing individuals and units for deployment is a national responsibility. Pre-deployment requirements will vary according to the operation but will always include the achievement of the desired level of training and the meeting of necessary administrative requirements.
Supporting Documentation	AD 70-1
ST 3.2.18.2 Definition	Provide Multinational Integrated Logistic Units (MILUs) (*) G.4.15 Often specialist services are required by more than one contingent, but it would be wasteful for all contingents to supply the service individually. Greater efficiency can be achieved by nations, forming MILUs, with the aim of placing such MILUs under the OPCON of a NATO Commander during a specific NATO-led operation. MILUs can be formed around a nucleus provided by one nation. Such arrangements can make substantial savings to the contributing nations, although the nation providing the nucleus may not make savings and should view the commitment as valuable contribution to the operation. The pooling of assets, cost sharing, reimbursement or provision free of charge arrangements should be agreed as part of the MILU participation arrangements, based on the generic MOU for MILUs in the MILU concept and doctrine of AJP 4.9
Supporting Documentation	MC 319/2 STANAG 2182/AJP 4.0 (A) AJP 4.9

Bi-SCD 80-90

ST 3.2.18.3 Definition	Support Visiting Forces (*) G.4.16 Forces operating from the territories and airspace of nations that are co-operating or participating in NATO-led operations must often provide Host Nation support. Bi- or multi-national legal instruments that stipulate the type of support delivered govern such support and the conditions and standards that apply. The type of support delivered will range from legal permissions, for aircraft over-flight for example, to the provision of physical or materiel assistance. This may involve the use of national or privately owned assets and facilities and could require the establishment of a commercial contract. Each support activity will require political and legal coordination to ensure that it complies with national and international law as well as the appropriate NATO standards and procedures for Host Nation, Lead Nation or Role Specialist Nation support. It follows that all personnel involved in the provision of Host Nation or other support must be capable of understanding and acting on such agreements. They must also be capable of understanding and, where applicable, initiating Memoranda of Understanding and Tactical Arrangements with other nations.
Supporting Documentation	MC-319/2 MC-334/2 AJP 4.0(A) AD 80-53 (Stage C) STANAG 2234/AJP 4.5(A) ALP – 4.3 AJP 4.9
ST 3.2.18.4 Definition	Sustain Forces (*) G 4.17 The deployment of forces invariably implies a national commitment to sustain those forces while deployed. All nations must therefore be aware of the requirement to conduct site surveys prior to deployment and to initiate agreements for Host Nation, Lead Nation or Role Specialist Nation support as appropriate prior to deployment, in order to address any National requirements for personnel support or administration. Participating nations must also initiate legal instruments such as Memoranda of Understanding and Status of Forces agreements to ensure that their units are sustainable in theatre. It follows that national requirements to sustain forces must be identified in advance of deployment. Attendance at a NATO-accredited logistics course is required for those officers who will fill functional posts responsible for sustaining their units in theatre.

OT 3.1.2 Plan and Coordinate Intra-theatre Deployment and
Redeployment of Forces within the JOA
Definition To conduct relocation or movement of operational forces by
any means or mode of transportation within a JOA
preparatory to deploying the force into combat formation in
support of the joint force commander's plan. Accordingly,
deployment must support the commander's desired
employment dispositions. This task includes generating and
dispersing operational forces. Redeployment may be a
combat or administrative movement from deployed position
in the JOA to home bases or other taskings. Extraction
pertains to combat movement of personnel, units, and
materiel from positions in the immediate vicinity of enemy
forces to designated areas.

OT 3.3.5
Definition

Develop ATC Facilities, Procedures and Airfields (*) A 1.6
The deployment of forces in support of NATO-led operations may require the use of national airfields and ATC facilities that should comply with published international standards for ATC facilities, procedures and airfields. It follows that NATO/ICAO standards should be applied whenever airfields and ATC facilities are being improved or upgraded, so that aircraft supporting NATO-led operations may utilize them. Scheduled periodic maintenance check-ups for all ATC facilities, and airfields must be upgraded in line with changing technology to meet stated overall future system needs. Commercial off-the shelf solutions can offer significant benefits in terms of both cost and in-service (delivery) dates. Primary, backup, no-break and UPS power supply and distribution systems for essential ATC facilities (radio, radar, etc) should be maintained and developed where appropriate, in accordance with NATO/ICAO requirements. Staff development training for ATC personnel should include English to SLP 3333.

TACTICAL TASKS (TT)

TT 3.0.0 Definition	Plan and Conduct Tactical Movement and Enhance Mobility To deploy, shift, regroup or move tactical formations within an area of operations. To dispose joint and/or multinational forces, conventional forces, and special operations forces (SOF) to impact the conduct of a campaign or major operation by either securing positional advantages before battle is joined or exploiting tactical success to achieve operational or strategic results. This activity includes moving or deploying forces for tactical advantage within a joint operations area and conducting manoeuvre to tactical depths (for offensive or defensive purposes). It also includes enhancing the mobility of friendly forces and controlling battlespace on land, on and under sea, in air, or in space. Tactical formations are forces moving to achieve tactical, operational or strategic objectives. As shorthand, they are referred to as tactical formations or tactical forces.
Supporting Documentation	AJP 1.0 AJP 3.0 Guidelines For Operational Planning (GOP)
TT 3.1.0 Definition	Plan and Prepare Tactical Movement To conduct actions to deploy, shift, regroup, or move joint or multinational operational formations within JOA from less to more promising locations relative to enemy locations. Such movements can take place by any means (joint, multinational, HN, or third-country) or mode (air, land, or sea).
Supporting Documentation	AJP 1.0 AJP 3.0 Guidelines For Operational Planning (GOP)
TT 3.1.1 Definition	Conduct Air-to-Air Refuelling (*) A 2.13. The ability to air-to-air refuel (AAR) increases the endurance, range, and flexibility of aircraft. AAR is routinely employed during NATO operations, using either or both of the “probe-and-drogue” and “flying-boom” systems. Aircrews should be able to plan and execute AAR operations in day, night, and in adverse weather conditions in compliance with NATO aviation fuel standards and AAR procedures, using one or both of the current NATO systems. Detailed knowledge of safety procedures, refuelling equipment and rendezvous procedures (including standard formation procedures to rejoin, refuel and leave safely from the tanker) is

A-3-19

Bi-SCD 80-90

Supporting Documentation	prerequisites for AAR. The carriage and operation of interoperable radio communications equipment are a prerequisite for the safe conduct of AAR. Each nation has it's own instructions related to AAR planning, AAR deployments and peacetime training constraints. National tanking capabilities and tanker/receiver clearance procedures have to be considered before planning or conducting AAR in a multi-national environment. STANAG 3971/ATP-56(B) (This is the principal reference.) STANAG 3447
TT 3.1.2 Definition	Plan Air Movements (*) A 2.2. Selected staff officers and operations personnel may be required to augment NATO movements planning staffs, either on deployed operations or when conducting Host Nation support to visiting forces. Movement planning should be accomplished using NATO common procedures and should include the use of both civilian and military air and ground assets. Participating nations should be familiar with and be able to comply with NATO deployment planning and execution procedures including operational reporting, airspace deconfliction and en-route management. Familiarity with the overall command and control structure for the management of movements within NATO and the processes for utilizing civilian or other contracts is required. Air movements planning personnel should be able to produce a detailed deployment plan in automated format and must be able to complete all required reporting responsibilities, including the airlift support request process, as well as initiating air transport co-ordination and co-operation between the NATO nations and Regional Headquarters.

TT 3.2.0 Definition	Conduct Transportation and Movement To plan and execute movement of materiel or personnel via any means; by sea, air or overland (e.g. railways, highways, waterways, pipelines). This task includes technical operations and moving and evacuating cargo, personnel, and equipment.
Supporting Documentation	MC 400/2

A-3-22

Bi-SCD 80-90

TT 3.2.1 Definition	Conduct Mobility Operations (*) L 3.5. Units must be able to enhance mobility in the area of operations by: • Conducting route reconnaissance and marking within standards • Constructing, maintenance and repairing roads • Controlling traffic • Snow and ice clearing • Removing and clearing man made obstacles • Booby trap clearing • Mine detection and clearing • Mine reporting • Supporting off-road movement
Supporting Documentation	ATP-52 (A) STANAG 2143
TT 3.2.2 Definition	Conduct Counter Mobility Operations (*) L 3.4. In support of manoeuvre as well as security operations units must be able to conduct counter mobility including use of anti-tank barriers, anti-vehicle barriers/obstacles, security barriers/obstacles, using wire mines and other material.
Supporting Documentation	ATP-35(B)) ATP-52 (A) AAP-19(C)
TT 3.2.3 Definition	Conduct Towing Operations (*) M 2.19. Ship captains must have complete knowledge of international/national traffic regulations. They must be able to conduct autonomous towing operations in various weather conditions, make necessary course alterations, and practice emergency breakaways.
Supporting Documentation	EXTAC 1000 MTP-1 D Vol I (Ch2 Ratification Draft) ATP-43(B)/MTP-43(B)
TT 3.2.4 Definition	Conduct Helicopter Operations (*) A 2.6. Helicopters are often tasked to support many types of operations. Helicopter aircrews must be capable of operating under day visual flight rules (VFR), day instrument flight rules (IFR), night VFR (with or without night vision devices (NVD) and IFR. Personnel involved in planning and

Bi-SCD 80-90

	conducting helicopter operations must initiate, process and implement tasking requests and messages and implement orders and instructions found in the Air Tasking Order (ATO), Air Combat Orders (ACO) or Special Instructions (SPINS). Helicopter crews must demonstrate proficiency in boarding and seating passengers, loading or off-loading cargo, performing centre of gravity calculations and passenger safety briefings. Aircrews must also display in-flight tactical awareness, knowledge of static grounding safety rules when attaching or detaching under-sling loads, and aircraft lift-off, transition, landing and other manoeuvres in accordance with NATO and national rules and procedures. Helicopter aircrews must have a profound knowledge in aeromedical evacuation (EA) procedures and search and rescue (SAR) procedures.

EFFECTIVE ENGAGEMENT

STRATEGIC TASKS (ST)

ST 4.0.0	Plan, Coordinate and Conduct Strategic Effective Engagement
Definition	The application of military forces to achieve specific Alliance strategic objectives. This task includes Alliance efforts, which integrate two or more Allied / Combined Joint Operations. It also includes coordination and integration of non-military support to the SCs for forces under their OPCOM and for military support to non-military agencies or groups. To employ all lawful means and systems (kinetic and non-kinetic) of attack for strategic effect including C-IED. This task includes series or parallel attack of selected enemy targets to instantly or progressively produces the desired effect (destroy, disintegrate, degrade, neutralize etc.) on the enemy's strategic forces. Targets may include national command and control facilities, CBRN weapon production and delivery systems, war-making capacity, economic or political centres of gravity. National strategic attack employs lethal (nuclear, conventional, and unconventional) and non-lethal assets in a manner consistent with national and International law.
Supporting Documentation	AJP 1.0 AJP 3.0 AJP 9.0
ST 4.1.0	Plan, Coordinate and Support Strategic Manoeuvre and Force Positioning
Definition	To conduct theatre strategic manoeuvre and force positioning of Service, joint, or multinational forces to achieve a position of strategic advantage over the enemy. Successful strategic concentration may be either offensive or defensive.
Supporting Documentation	AJP 1.0
ST 4.1.1	Posture Forces for Strategic Manoeuvre
Definition	To plan and order the grouping of forces and means into strategic formations for executing theatre war or strategic plans or campaigns. Strategic formations support the theatre strategic concept and intent and provide for the effective use

Bi-SCD 80-90

of all elements of assigned forces, a capability for manoeuvring and increasing the strength of forces and means during the joint operation, a rapid transformation from strategic offensive to strategic defensive operations without the loss of momentum or effectiveness, the conduct of continuous operations, and the protection of the joint force. A strategic formation could be the combatant command, a subordinate joint force, or even a single service organization assigned a strategic mission.

Supporting
Documentation AJP 1.0

ST 4.1.3
Definition Synchronize Forcible Entry in Theatre
To synchronize the seizing and holding of a military lodgement in the face of armed opposition. This task requires tailoring forces for the mission and ensuring they are scheduled for simultaneous deployment and employment. This activity is often the only method for gaining access into the joint operations area or for introducing decisive forces into the region. Synchronized forcible entry, with any combination of airborne, amphibious, and air assault operations, is designed to horizontally escalate the operation to exceed the enemy's capability to respond.

Supporting
Documentation AJP 1.0
MC 317-1

ST 4.1.4
Definition Integrate Direct Action in Theatre
To integrate short-duration strikes and other small-scale offensive actions by special operations forces in order to seize, destroy, capture, recover, or inflict damage on designated personnel or materiel, with strategic results. This task includes the integration and synchronization of SOF in coordinated raids, ambushes, or direct assaults; the emplacement of mines and other munitions; standoff attacks; support for the employment of precision guided weapons;

Bi-SCD 80-90

independent sabotage; anti-ship operations, and information operations.

Supporting
Documentation AJP 1.0

ST 4.1.4.1 Coordinate Military Assistance
Definition To organize, train, advise, or assist friendly or allied forces to achieve strategic results.

Supporting
Documentation AJP 1.0

ST 4.1.5 Coordinate Show of Force/Demonstration
Definition To coordinate and support for the execution of show of force operations or demonstrations. Demonstrations are designed to display resolve and capability to affect regional politico-military decision making, to support the other instruments of national power or to draw the attention of an enemy. Show of force operations are those demonstrations conducted to exhibit military power, but with the intention of not becoming engaged in combat. Activities could include amphibious demonstrations, aircraft and ship visits or concentrations, combined training exercises, forward deployments, and the introduction or build up of a military force in a region.

Supporting AJP 1.0
Documentation AJP 3.0

ST 4.1.6 Support Operations in Depth
Definition To support various types of actions across the depth and breadth of the theatre of war. Such operations achieve a position of advantage or defeat/destroy enemy forces or capabilities. Theatre strategic operations in depth can be conducted by theatre assigned forces and/or by external supporting forces. Operations in depth may be joint, coalition, or single Service or nation, but in all cases support theatre strategic objectives.

Documentation AJP 1.0

ST 4.1.7 Plan and Conduct Counter-IED (C-IED) Operations
Definition In development.

Supporting
Documentation In development.

Bi-SCD 80-90

ST 4.2.0	Establish Strategic Counter-mobility
Definition	To delay, channel, or stop offensive air, land, space, and sea movement by an enemy formation attempting to achieve concentration for strategic advantage. It also includes actions to shape, at the strategic level, enemy retrograde operations to allow friendly exploitation.
Supporting	AJP 1.0
Documentation	AJP 3.0
ST 4.2.1	Establish Strategic System of Barriers, Obstacles, and Mines
Definition	To channelize, delay, disrupt or attrite the enemy and protect friendly forces relative to employment of barriers, obstacles, and mines in support of land, maritime, and air operations. Strategic barriers, C-IED, obstacles, and minefields normally are emplaced around an existing terrain feature (e.g., mountain chain or strait) or a manmade structure (e.g., air base, canal, highway, or bridge). Selecting locations and emplacing strategic land and maritime obstacles should be coordinated among multinational forces at all levels. This will preclude limiting friendly operational manoeuvre, conflicting, duplicative, or divergent operations, and possible fratricide among multinational forces. Plans that could impact on other theatres should be coordinated to prevent potential mutual interference. This is particularly important for maritime mine laying that could affect strategic movement to or from other theatres.

Definition	In development.
Supporting Documentation	ATP 6 VOL 1
ST 4.2.2	Establish Quarantine, Embargo, or Blockade
Definition	To isolate a place, especially a port, harbour, or part of a coast, by ships or troops and aircraft to prevent entrance or exit and deny an enemy support, commerce, reinforcement, or mobility, and/or reduce an adversary's internal political legitimacy. This task strips away as much of the enemy's support and freedom of action as possible, while limiting potential for horizontal or vertical escalation. It interferes with the enemy's ability to mass, manoeuvre, withdraw, supply, command, and reinforce combat power while it weakens the enemy economically, materially, and psychologically. This task serves to deny the enemy both physical and psychological support and may separate the enemy leadership and military from public support.
Supporting Documentation	AJP 1.0 AJP 3.0
ST 4.2.3	Control or Dominate Strategically Significant Area(s)
Definition	To control or dominate the theatre physical and information environments whose possession or command provides either side a strategic advantage. To control is to deny the area to the enemy by either occupation of the strategically key area or by limiting use or access to the environment or combat area by the enemy. For an environment to be strategically key, its control must achieve strategic results or deny same to the enemy. In military operations other than war, this activity pertains to a friendly country conducting populace and resources control.
Supporting Documentation	AJP 1.0 AJP 3.0
ST 4.2.4	Control Strategically Significant Land Area
Definition	To control strategically significant land area in order to facilitate the freedom of movement and action of forces. The objective is to allow land, sea, air, space, and special operations forces to conduct operations free from major interference from enemy forces based upon land areas. This task includes identifying and prioritising critical areas and

Bi-SCD 80-90

Supporting Documentation	focusing efforts, during specific periods of time, when superiority must be established to ensure freedom of action for critical operations & protection of key assets (e.g. C-IED). AJP 1.0 AJP 3.0
ST 4.2.5 Definition	Gain and Maintain Air Superiority in JOA To conduct counterair operations sufficient to provide air superiority at the proper place and time to provide freedom of action for critical operations and protection of key assets. JFCs normally seek to secure air superiority early in the conduct of joint operations. This task attacks the enemy's warfighting capabilities in the air through offensive counterair (OCA), defensive counterair (DCA), anti-air warfare (AAW), air interdiction (AI) as well as strategic attack on enemy airpower capability.
Supporting Documentation	AJP 1.0 AJP 3.0
ST 4.2.6 Definition	Gain and Maintain Maritime Superiority in JOA To conduct the employment of forces for decisive engagement, attrition, containment, neutralization, or destruction of enemy maritime surface, subsurface, and air forces and their means of support in order to secure the desired degree of maritime superiority. This task attacks the enemy's warfighting capabilities in the maritime environment through air, surface and subsurface warfare, including antisubmarine warfare (ASW), undersea warfare (USW), air defence (AD), defensive counterair (DCA), air interdiction (AI), and traditional surface and subsurface warfare. Additionally, this task requires the coordination of barrier and blockade operations to deny enemy maritime forces access to open ocean areas and other maritime areas; offensive and defensive mining operations to restrict the freedom of movement of enemy maritime forces in areas such as harbours and chokepoints; and mine countermeasures to permit freedom of movement of friendly maritime forces.
Supporting Documentation	AJP 1.0 AJP 3.0
ST 4.3.0 Definition	Employ Joint Operations Area (JOA) Strategic Firepower To deliver firepower through available theatre positions, units, or weapons systems. Theatre firepower is the application of

Bi-SCD 80-90

lethal and non-lethal means to achieve the desired impact in the conduct of theatre strategy, theatre campaigns, and joint operations. Theatre strategic firepower may involve Service, joint, or multinational forces. Delivery of theatre firepower may be planned or immediate. Theatre strategic firepower would be coordinated with manoeuvre in a campaign as a coequal component. Such firepower may be independent of land or sea manoeuvre.

Supporting
Documentation In development.

ST 4.3.1
Definition Develop Joint Operations Area (JOA) Strategic Targets List
To acquire, positively identify, select, and prioritise targets that are enemy strategic decisive points, critical nodes, and centres of gravity. This task includes apportioning resources to attack the selected strategic targets in either a deliberate or adaptive planning mode.

Supporting
Documentation In development.

ST 4.3.1.1
Definition Determine NATO's Strategic Targeting Guidance
To determine national strategic targeting policy and provide advice to the President and Secretary of Defence concerning all aspects of the use of strategic fires and information operations weapons. This task includes determining target priority, needed level of damage or as well as legal limitations and political constraints on targets of strategic importance.

Supporting
Documentation In development.

ST 4.3.1.2
Definition Determine NATO's Strategic Attack Guidance
To determine national strategic attack policy. Strategic attack refers to the use of strategic firepower to create strategic nuclear, conventional, lethal, or non-lethal effects. The components to determine attack policy are situational dependent. Examples include development of policy pertaining to the Single Integrated Operation Plan (SIOP), nuclear strike plans, conventional strike plans, information operations (IO), C-IED, and anti-satellite (ASAT) plans.

Supporting
Documentation In development.

Bi-SCD 80-90

ST 4.3.2	Select Strategic Targets in the Joint Operations Area (JOA) for Attack
Definition	To evaluate each strategic target to determine if and when it should be attacked for optimum effect on enemy centres of gravity, strategic decisive points, and in conformance with the combatant commander's strategic concept and intent. Included here are the destruction and degradation of enemy IO means and CBRN weapon production, infrastructure, and delivery systems.
Supporting Documentation	In development.
ST 4.3.3	Assign Combined/Joint Firepower to Targets/Target Systems
Definition	To assign theatre strategic firepower resources to classes or types of strategic targets, or targets themselves, in accordance with the geographic combatant commander's strategic plan and intent. Task includes assigning targets/target systems to the appropriate joint force component. The JFC should consider if any theatre strategic targets should be treated as immediate targets; if so, then the JFC should articulate his risk tolerance and his guidance for coordinating rapid attacks. Note: Immediate targets are targets that have been detected too late to be included in the normal targeting process, and therefore, have not been scheduled as planned targets. Immediate targets are usually time-sensitive, requiring immediate response as they pose imminent danger to friendly forces or are highly lucrative and present fleeting opportunity for attack.
Supporting Documentation	In development.
ST 4.3.4	Conduct Joint Operations Area (JOA) Combat Assessment
Definition	To determine the overall effectiveness of Service, joint, and multinational attacks employed in the theatre, as it relates to the joint force commander's (JFC) campaign objectives. This task includes assessing theatre battle damage, munitions effects, C-IED consequence analysis for CBRN weapon targets (as necessary), reassessing mission requirements (e.g., re-attack the target), and analysing/reporting the effects of combat missions in achieving the JFC's campaign objectives. It includes an evaluation of all force employments tasked with supporting the theatre campaign plan.

Bi-SCD 80-90

Supporting
Documentation In development.

ST 4.4.0 Attack Joint Operations Area (JOA) Strategic Targets / Target Systems

Definition To assign theatre strategic firepower resources to classes or types of strategic targets, or targets themselves, in accordance with the geographic combatant commander's strategic plan and intent. Task includes assigning targets/target systems to the appropriate joint force component. The JFC should consider if any theatre strategic targets should be treated as immediate targets; if so, then the JFC should articulate his risk tolerance and his guidance for coordinating rapid attacks. Note: Immediate targets are targets that have been detected too late to be included in the normal targeting process, and therefore, have not been scheduled as planned targets. Immediate targets are usually time-sensitive, requiring immediate response as they pose imminent danger to friendly forces or are highly lucrative and present fleeting opportunity for attack.

Documentation In development.

ST 4.4.1 Conduct Attack on Joint Operations Area (JOA) Strategic Targets / Target Systems Using Lethal Means

Definition To engage strategic targets (other than air defence or defensive counter air targets) with available Service, joint, and allied/coalition delivery systems, delivering lethal ordnance. Lethal means may include among other operations forcible entry, direct action, unconventional warfare, information, C-IED, and theatre of war operations in depth. Paramount consideration must be given to how best to hold at risk what the enemy values most. The objective of such attacks may be to delay, disrupt, defeat, destroy, or degrade enemy forces and to affect the enemy's will to fight for strategic results. Alternatively, the objective may be to damage or destroy critical facilities (including C4I and CBRN weapon targets) or to delay, disrupt or degrade critical tasks, achieving strategic results. Means may include surface and subsurface land and sea based joint and multinational theatre systems and air and space forces (aircraft, missiles, helicopters, UAV, space vehicles). This activity includes the attack of offensive counterair targets.

Supporting In development.

Bi-SCD 80-90

Documentation

ST 4.4.2 Conduct Attack on Joint Operations Area (JOA) Strategic
Targets / Target Systems Using Non-lethal Means
Definition To engage strategic land, sea, air, and space (less air
defence) targets with joint and multinational means designed
to impair, disrupt, or delay the performance of enemy forces,
activities, and facilities to achieve strategic results. These
means include the use of electronic warfare, military
deception, OPSEC, computer network, psychological
operations, and special operations forces.
Non-lethal means also includes employment of PSYOP
activities as part of counterinsurgency efforts in military
operations other than war. In these cases the objective is to
foster favourable attitudes toward the HN and modifies
insurgent behaviour.

Supporting
Documentation In development.

ST 4.4.2.1 Conduct Joint Operations Area (JOA) Psychological
Operations / Activities
Definition To plan and execute psychological activities within a specified
Joint Operations Area using methods of communications and
other means directed to approved audiences in order to
influence perceptions, attitudes and behaviour, affecting the
achievement of political and military objectives. PSYOPS
activities are aimed at making identified and approved target
audiences modify their attitudes and behaviour in a manner
that is favourable to NATO objectives in the specified Joint
Operations Area.

ST 4.4.2.3
Definition Attack Joint Operations Area (JOA) Information Systems Computer Network Operations (CNO) is the overarching term for offensive and defensive activities regarding computer-based systems. One out of three functions is Computer Network Attack (CNA). CNA is the incursion into a computer, computer system or network, via the software or hardware, in order to: disrupt, deny, degrade, or destroy information resident in computers and networks, or the computers and the networks themselves. Attack includes physical damage to components induced by manipulation or modification of the software.

Supporting
Documentation AJP 3.1 (Study draft as at 30 OCT 03)

ST 4.4.3
Definition Synchronize Joint Operations Area (JOA) Strategic Firepower To synchronise, and integrate as necessary, strategic firepower on single or multiple targets of strategic significance at the decisive time. Synchronisation is simultaneous across strategic targets and to strategic depths. This synchronisation includes lethal and non-lethal attacks (including C2W measures) and to minimize their effect on friendly forces, neutrals, and non-combatants. It also includes synchronising strategic firepower with Alliance military strategic firepower and operational firepower within the theatre to ensure unity of effort, and not to disrupt firepower supporting campaigns and major operations, or to reveal friendly force intentions at any level.

ST 4.4.4
Definition Coordinate Precision Engagement Counter Countermeasure Operations To coordinate counter countermeasure operations to neutralize the effects of threat defensive countermeasures used to degrade/neutralize our ability to compile a high value asset target list as well as our ability to attack these high value targets with precision engagement. Task includes degrading threat countermeasures against intelligence collection sensors and precision engagement weapon systems and employing Electro-Optical/Infrared, RF, MMW, GPS and Acoustic technologies. Task also includes target signature alteration,

Bi-SCD 80-90

	decoy/deception, target obscuration, C-IED, and sensor/signal processing jamming/disruption.
Supporting Documentation	In development.
ST 4.4.4.1	Coordinate Intelligence Collection Sensors Counter Countermeasures
Definition	To coordinate counter countermeasures into the Intelligence Collection Planning. Task includes: identifying threat countermeasures to intelligence collection sensors as part of the intelligence preparation of the battlespace; analysing the ability of identified threat countermeasures to defeat, degrade, or deceive intelligence collection sensors thereby inhibiting the compilation of an accurate high valued asset target list; and developing intelligence collection sensor counter countermeasure information for commander's guidance.
Supporting Documentation	To be developed.
ST 4.4.4.2	Coordinate Precision Engagement Counter Countermeasures
Definition	To coordinate counter countermeasures for inclusion in Precision Engagement Planning. This task includes: identifying threat countermeasures to precision engagement as part of the intelligence preparation of the battlespace; analysing the ability of identified threat countermeasures to defeat, degrade, or deceive friendly precision guided weapons and their associated target acquisition systems; and developing precision engagement counter countermeasure information for commander's guidance.
Supporting Documentation	To be developed.
ST 4.5.0	Plan and Coordinate Space Support
Definition	To launch, sustain, (predicted or unforeseen), or augment orbiting DOD space assets. Launch tasks include booster assembly, mating the booster and payload, launching the vehicle, providing range support, notifying the appropriate agencies, and launch support analysis. Once in orbit, this task includes monitoring and controlling space systems to maintain their operational status. Task includes initialisation activities after launch, routine control of all systems that support the payloads, contingency operations to recover from anomalous conditions, and relocating or reorienting space systems as

Bi-SCD 80-90

directed to support national or theatre requirements. This task also includes control of payloads as directed by other organizations responsible for the payload operation and management.

Supporting
Documentation To be developed.

ST 4.5.1
Definition Provide Space Control
To assure freedom of action of US and multinational space assets in space, while denying adversaries such freedom of action. Space control includes protection of US space systems and negation of enemy space systems. In addition, this task also includes the necessary surveillance to track, assess and catalogue all orbiting space objects, and to provide collision avoidance reports.

Supporting
Documentation To be developed.

ST 4.5.1.1
Definition Provide Space Surveillance
To detect, track and catalogue objects in space and to direct the space surveillance network to provide data on all near earth and deep space satellites. It includes processing launches, manoeuvres, re-entries, de-orbits, break-ups, separations and conjunctions.

Supporting
Documentation To be developed.

ST 4.5.1.2
Definition Provide Space Protection
To protect our assets from various threats such as directed energy, RFI, space debris.

Supporting
Documentation To be developed.

ST 4.5.1.3
Definition Provide Space Negation
To deny the use of space to the enemy.

Supporting
Documentation To be developed.

ST 4.5.2
Definition Provide Space Force Enhancement
To provide direct support to combatant commanders, operational commanders, and land, sea and air forces through

Bi-SCD 80-90

the use of space based sensors and payloads. Space force enhancements support the war-fighter with navigation, surveillance and reconnaissance, communications, weather/environmental, and theatre ballistic missile warning products. In addition, this task includes deployment of Space Support Teams to ensure the responsive application of space assets for geographic combatant and subordinate joint force commanders. Note: This task does not include tasks to maintain on-orbit space systems that support sensors and payloads. Management of space-based communications is part of the overall worldwide C4 network.

Supporting
Documentation To be developed.

ST 4.5.2.1 Coordinate Navigation Support
Definition To provide navigation support to the war-fighter through the use of space based sensors and payload.

Supporting
Documentation To be developed.

ST 4.5.2.2 Provide Weather / Environmental Support
Definition To provide weather and environmental support to the war-fighter through the use of space based sensors and payload.

Supporting
Documentation To be developed.

ST 4.5.2.3 Provide Communication Channels
Definition To provide sufficient satellite channels for data and communications to the war-fighter through the use of space based sensors and payload including UHF, EHF, SHF and GBS.

Supporting
Documentation To be developed.

ST 4.5.2.4 Provide Surveillance and Reconnaissance Support
Definition To provide surveillance and reconnaissance to the war-fighter through the use of space-based sensors and payload including satellite vulnerability and intelligence products.

Supporting
Documentation To be developed.

ST 4.6.0 Coordinate and Conduct the Military Information Strategy

Bi-SCD 80-90

Definition	(MIS) In the implementation of a Military INFO Strategy (MIS), Military INFO Campaign (MIC) and Military INFO OPS Plans (MIOPs) need to be synchronised to provide the synergy of effects essential to the military contribution to the INFO Strategy. Activities at each command level have to support the objectives and end states of the other and must be synchronised between all contributors to INFO OPS at their own level. Only then these activities will be targeted purposefully and directly to decision-making adversaries. This task should also include liaison with the various International and Non-governmental Organisations and NATO Senior Civilian Representative (SCR) as this contributes to the overarching MIS.
Supporting Documentation	AJP 3.1 (Study draft as at 30 Oct 2003) AJP 9.0
ST 4.6.1 Definition	Coordinate Theatre-wide Information Operations (INFO OPS) To conduct offensive and defensive information operations (INFO OPS) for implementing NATO's INFO strategy, policy, objectives and operations at the theatre level. This task includes planning, synchronization and use of operations security (OPSEC), information security (INFOSEC), military deception, psychological operations (PSYOPS), electronic warfare (EW), computer network operations (CNO); and physical destruction, mutually supported by Intelligence (INTEL), to influence decision-making of adversaries in support of the Alliance overall objectives by affecting their Information-based processes and systems while exploiting and protecting one's own. If in support of homeland security, legal restrictions may apply.
Supporting Documentation	MC 422/3 AJP 3.10 (Study draft as at 30 OCT 03)
ST 4.6.2 Definition	Define Military Information Operations Strategy and Objectives The Military strategy for engaging in the INFO Domain and for directing the JFC operations within any allocated JOA. Will be a continuous effort in peacetime, crisis and conflict and will reflect the NATO INFO strategy objectives and desired end state. The Military INFO OPS objectives (MIOO) are the goals that together are designed to achieve the Military INFO Campaign (MIC). They are directly linked to and derived from the strategic INFO OPS objectives and Commander

Bi-SCD 80-90

	objectives. Commands below CJTF, JHQ level will produce INFO OPS Sub Objectives to support MIOO for their relevant environment.
Supporting Documentation	AJP 3.10 (Study draft as at 30 OCT 03)
ST 4.6.2.1	Recognise Political and Legal Limitations on use of Information Operations (INFO OPS) activities.
Definition	Military Information Operations (Mil INFO OPS) at each level of command should be planned and conducted with consideration for the full spectrum of political and diplomatic activities, information technology available and the military resources of the Alliance and Nations, in order to affect an adversary's decision-making to the Alliance's advantage. The key to success for Mil INFO OPS is harmonization and co-ordination of the planned and ongoing activities in the INFO Domain between the strategic, operational and tactical levels. Each level of command has a role to play in the planning, execution and assessment of Mil INFO OPS, but each level as well must be aware of the other's roles and limitations in order to generate synergistic effects and ensure mutual support (e.g. interaction with the NATO Senior Civilian Representative (SCR)).
Supporting Documentation	MC 422/3 AJP 3.10 (Study draft as at 30 OCT 03)
ST 4.6.2.2	Consider allocation of Rules of Engagement (ROE) for Military Information Operations (Mil INFO OPS)
Definition	In forming Mil INFO OPS advice as depicted in MC 422/1, NATO HQ would consult with the Strategic Commander to consider the allocation of Rules of Engagement (ROE) guiding the application of Mil INFO OPS. This requires NAC approval.
Supporting Documentation	MC 422/3 AJP 3.10 (Study draft as at 30 OCT 03)
ST 4.6.2.3	Conduct Military Information Operations (Mil INFO OPS)
Definition	To plan theatre-wide information operations (INFO OPS), integrating military operations. Theatre level INFO OPS planning and execution must also be co-ordinated and integrated with allied and coalition governments within the joint operations area (JOA). INFO OPS has applicability throughout the spectrum of conflict and supports the full range of military operations.

Bi-SCD 80-90

Supporting MC 422/3

ST 4.6.2.4 Protect and Exploit Information, Information Systems and
Decision-Making.
Definition The co-ordination required between Force Protection (FP),
Operational Security (OPSEC), Information Operations (INFO
OPS), Information Security (INFOSEC), and the Security
element is critical to a successful defensive INFO OPS.
Synchronising these staff elements and requesting assistance
from external organisations for specific capabilities will ensure
a coherent and integrated defensive INFO OPS posture that
enables the command to conduct operations with the
knowledge that its own information cycle is protected.
Supporting MC 422/3
Documentation AJP 3.10 (Study draft as at 30 OCT 03)

ST 4.6.2.5 Regularly Reassess Military Information Strategies (MIS) and
adjust as necessary
Definition The Military Information Strategies (MIS) must be a
continuous ongoing activity throughout peace, crisis and
conflict in support of the political INFO Strategy. The MIS
should be reviewed and updated as required, based on effects
assessments. The operational HQs must support these
objectives by implementation of activities and policies, which
contribute to the achievement of the desired effects.
Supporting
Documentation AJP 3.10 (Study draft as at 30 OCT 03)

ST 4.6.2.6 Approve Information Operations (INFO OPS) Target Sets for
Offensive Operations
Definition Information Operations (INFO OPS) Target nomination from
the Joint Target List (JTL) will assist to identify areas where
the Alliance capabilities, both lethal and non-lethal, could
achieve specific effects in support of the Commanders
objectives. Mil INFO OPS targeting offers scope for
influencing KDM and the decision-making process through
hard and / or soft means. All targeting requirements are
brought together into the Joint Prioritised Target List (JPTL),
and co-ordinated through the targeting process in order to
achieve this synergy and economy of resource and effect.

Supporting Documentation	assessment at all levels of command STANAG 2437/AJP 01(B) BI-SC Guidelines for Operations Planning (GOP) MC-402/1 MC 422/3 AJP 3.10 (Study draft as at 30 OCT 03)
ST 4.7.0 Definition	Develop and Provide Public Information To advise and assist Alliance authorities in presenting NATO's views to both internal and external audiences. This task includes originating, and assisting civilian news media in preparing both print and broadcast news material, and assisting with community relation's projects. Public affairs services apply across the range of military operations and are especially applicable in military operations other than war. To develop and provide to the combatant commander and allied partners a program for telling the theatre and combined command's story to audiences both internal (allied military and civilian) and external (including NATO nations' and Partners' citizens at home). This task includes preparing information for internal and external release, and facilitating access to deployed units and personnel for civilian news media (both broadcast and print). This task further includes developing PA advice for the combatant commander and country ambassador through OSD/PA to provide to the SACEUR. Related tasks include providing media support, assisting in the deployment and operation of the NATO Media Pool, and establishing an allied press information centre (APIC), combined information bureau (CIB) or, at a minimum, Joint Information Bureau (JIB) and sub-JIBs in theatre of war. This task also includes promulgating Public Information approved guidance to theatre forces for execution.
Supporting Documentation	To be developed.
ST 4.7.1 Definition	Plan and Provide for External Media Support and Operations Plan and execute a media program directed toward NATO civilian media and the media agencies of foreign nations that is both proactive and reactive to the demands of the media in order to fulfil our obligations to provide timely and accurate information to the NATO public. The program will include the development of public affairs guidance (PAG), press releases, and plans to provide information, and to meet the requests of media for information on all exercises and operations where

Bi-SCD 80-90

information is not classified. Plans may include briefings and media availability by selected individuals from the command, media opportunities for coverage, and releases of information.

Supporting Documentation To be developed.

ST 4.7.2
Definition

Coordinate Command / Internal Information Programs
Coordination with subordinate and component commands will be effected to ensure that internal information requirements are being addressed. This includes arranging for employment of, for instance, Armed Forces Radio and Television Service (AFRTS) in the theatre and distribution of Stars & Stripes or similar print media products. In addition, coordination for the production of command information products and the procurement and distribution of Service publications may be accomplished.

Supporting
Documentation

ST 4.7.3
Definition

Plan and Conduct Community Relations Program
Within the joint operations area, plan for and execute community relations programs in coordination with civil affairs that support direct communication with local, national, and international publics, as applicable. This effort requires close coordination with the Military Departments and HNs. The program may also include the use of military equipment and units such as military aircraft/vehicles for static display, vessels for ship visits, military bands, and marching units. Plans may include speaking engagements by selected senior commanders and individuals within the commands as well as unit participation in civic activities.

Supporting
Documentation To be developed.

ST 4.8.0
Definition

Foster International Relations and Security Arrangements
To build cooperative relationships with other nations, agencies and groups in the region. Actions must be taken with careful consideration of the diversity of extant political systems, alliances, and the unique character of the people and their leadership.

ST 4.8.1	Enhance Politico-Military Relations
Definition	To strengthen and promote alliances through support of regional relationships. This task includes understanding and adjusting to national and regional concerns and differences.
Supporting Documentation	MC 400/2
ST 4.8.2	Promote Security and Stability
Definition	To work with multinational partners within the framework of military alliances to improve Alliance posture in the region.
Supporting Documentation	MC 400/2
ST 4.9.0	Provide Support to Allies, Governments, International Organizations or Groups
Definition	To provide support to friendly governments and organizations operating in the region. Typically support includes intelligence, logistic, and C2 support, civil-military cooperation, and other forms of support determined to further alliance objectives.
Supporting Documentation	MC 400/2
ST 4.9.1	Plan Peace Support Operations
Definition	To support peace operations through the coordination of the three general areas of diplomatic action, traditional peacekeeping, and forceful military actions. This task can include coordination with international organizations and regional groupings.
Supporting Documentation	MC 400/2
ST 4.10.0	Provide Support to Other Government Agencies
Definition	To provide specified support to other military commands, and other governmental departments or agencies that are operating within the region. This support could include intelligence, logistic, medical, C4, and security support, combating terrorism, counter-proliferation, and non-combatant evacuation (NEO).
Supporting Documentation	MC 400/2

Bi-SCD 80-90

ST 4.10.1	Assist in Combating Terrorism
Definition	To produce effective protective measures to reduce the probability of a successful terrorist attack. This task includes those defensive measures (antiterrorism) used to reduce vulnerability of individuals and property to terrorist acts, to include limited response and containment by local military forces. This task also includes those offensive measures (counter-terrorism) taken to prevent, deter, and respond to terrorism.
Supporting Documentation	MC 400/2
ST 4.10.2	Counter Weapon and Technology Proliferation
Definition	To provide military support for missions assigned to prevent/limit/minimize the introduction of CBRN weapons, new advanced weapons and advanced weapon capable technologies to a region.
Supporting Documentation	MC 400/2

Bi-SCD 80-90

OPERATIONAL TASKS (OT)

OT 4.0.0	Plan, Coordinate and Conduct Effective Engagement at the Operational Level
Definition	To employ lethal and non-lethal means to defeat enemy forces or to maintain freedom of movement. Operational firepower is by its nature, primarily a joint/multinational task. Firepower refers to the delivery of all types of ordnance to include bombs, rockets, missiles, and artillery as well as other non-lethal means against enemy targets at operational depths. Note: The two broad categories of targets are planned and immediate. Planned targets are targets that are known to exist in an operational area and against which attacks have been scheduled in advance or are on-call. Immediate targets, either unplanned or unanticipated, are targets that have been identified too late to be included in the normal targeting process, and therefore, have not been scheduled. Operational firepower uses the six phases of the joint targeting cycle: commander's guidance, target development, weaponeering, force application, execution planning / force execution, and combat assessment. This cycle is used to attack planned targets. Immediate targets require modified procedures often involving rapid cross-component coordination.
Supporting Documentation	MC 400/2
OT 4.1.0	Prepare Operational Plans and Orders
Definition	To make detailed plans, staff estimates, and decisions for implementing the geographic combatant commander's theatre strategy, associated sequels, and anticipated campaigns or major operations. Plans and orders address, among other things, centres of gravity, branches, sequels, culminating points, and phasing. Planning includes organizing an effective staff, structuring and organizing the force, considering multinational capabilities/ limitations, and cross-levelling or balancing Service component, joint, and national C4 means. Plans should address specific missions and tasks for subordinate joint or multinational task forces, Service and functional components and supporting commands and agencies. Plans should specify main effort(s) and supporting and supported relationships by phase. Planning also should address rules of engagement for force employment. This activity includes determining solutions to operational level needs. All plans and orders must maximize the operational capability while simultaneously minimizing the risk to the force.

OT 4.2.2	Coordinate the Transition Combined Joint Forces to and from Tactical Battle Formations
Definition	To coordinate the extension of (or withdrawal from) joint/multinational operational forces in width and/or depth to increase tactical readiness for battle in conformance with the joint force commander's campaign or major operation plan and to facilitate the tactical commander's plan and intent.
Supporting Documentation	AJP 1.0 AJP 3.0 Guidelines For Operational Planning (GOP)
OT 4.2.3	Posture Allied / Combined Joint Forces for Operational Formations
Definition	To coordinate the grouping of joint forces and means into operational formations for the conduct of major operations and campaigns. Operational level formations must support the commander's concept and provide for the effective use of all elements of the force. These formations retain a capability for manoeuvring and increasing the strength of forces and means during the operation. The formations need agility to rapidly transform from one type of operation to another without the loss of momentum or effectiveness, continuity of operations, and protection of the force. Operational formations may consist of several echelons of joint and combined arms organizations, for example, armour, mechanized, artillery, helicopter and air forces, grouping of air and missile defence forces, naval battle groups (to include amphibious forces), special operating forces, engineers, reserves of various types, and support forces. A commander can use posturing to deceive the enemy of true intentions.

Documentation MC 400/2

OT 4.2.9.1 Evacuate Non-Combatants (*) M 7.1.
Definition Non-combatant evacuation operations (NEO) are conducted to evacuate non-combatants and nonessential military personnel, whose lives are in danger from locations in a foreign nation to an appropriate safe haven in the home nation or elsewhere. A NEO also may include the evacuation of selected citizens of the host nation or third country nationals. A NEO is suited for teams of military personnel trained in amphibious warfare operations since it is similar to an amphibious raid, usually involving swift insertion of a force, temporary occupation of an objective, and a planned withdrawal upon completion of the mission. It differs from an amphibious raid since force used is normally limited to that required to protect the evacuees and the evacuation force. Additionally, NEOs have humanitarian, military, and political implications.

OT 4.2.12 Definition	Conduct Peace Support Operations in the Joint Operations Area (JOA) To conduct peace operations (PO) in an operational area. This

Bi-SCD 80-90

involves actions to preserve, maintain, or restore the peace and coordinate the interaction on military forces with political and humanitarian agencies involved. PO are often associated with foreign humanitarian assistance operations. Such action is normally conducted under the authority of Chapter VI or VII of the UN Charter or by regional arrangements in accordance with Chapter VIII of the UN Charter. PO encompasses peacekeeping operations (PKO) and peace enforcement operations (PEO) in support of diplomatic efforts to establish and maintain peace. Optimally, PKO forces should not transition to PEO or vice versa unless there is the requisite mandate or political decision and appropriate adjustments to force structure, rules of engagement (ROE), and other important aspects of the mission. In PO there should be plans for transition from PKO to PEO (rapid and unpredictable events may occur) or from PEO to PKO (more deliberate and predictable as the operation unfolds successfully). Types of transition may include: NATO unilateral operation or multinational coalition to a UN-led coalition; combat to non-combatant operations; and military to civilian control. PO “mission creep” occurs when a mission changes in response to new events or circumstances. It may develop from inadequate or false assumptions, misinterpreted intent, or unrealistic development of implied tasks in planning.

Documentation

OT 4.2.12.1

Conduct Peacekeeping Operations in the Joint Operations Area (JOA)

Definition

To conduct peacekeeping operations (PKO) in the JOA. PKO are military operations undertaken with the consent of all major parties to a dispute, designed to monitor and facilitate implementation of an agreement (cease fire, truce, or other such agreement) and support diplomatic efforts to reach a long-term political settlement. PKO are conducted by impartial peacekeeping (PK) forces. Peacekeepers conduct operations in an open and highly conspicuous manner to establish a presence, which inhibits hostile action by disputing parties and bolsters confidence in the peace process. Such action is normally conducted under the authority of Chapter VI of the UN Charter.

OT 4.2.16 Conduct Forcible Entry: Airborne, Amphibious, and Air Assaults
Definition To coordinate, synchronize and execute operations to gain access into an area of operations for introducing decisive forces into the region. This is Initial Entry Operations. To conduct operations to seize and hold a military lodgement in the face of armed opposition, to strike directly at enemy operational or strategic centre(s) of gravity, or to gain access into the operational area or for introducing decisive forces into the region. A joint force may be tasked to do this by airborne, amphibious, and/or air assault in conjunction with other maritime, air, and special operations forces comprising the joint force.

 Guidelines For Operational Planning (GOP)
 MC 477

OT 4.2.17 Seize, Hold, and Expand Lodgement

Bi-SCD 80-90

Definition To reinforce and expand the lodgement in a hostile or threatened territory to ensure the continuous air or sea landing of troops and materiel and provide the manoeuvre space necessary for projected operations. Normally, it is the area seized in the assault phase of an airborne, amphibious, or air assault operation.

Supporting AJP 1.0
Documentation AJP 3.0
Guidelines For Operational Planning (GOP)
MC 477

OT 4.2.18 Conduct Raids in the Joint Operations Area (JOA)
Definition To conduct raids into hostile territory. These activities are often small-scale and designed for swift penetration to secure information, confuse the enemy, or destroy key installations. Coordinating the withdrawal of forces conducting raids is part of this task.

Supporting AJP 1.0
Documentation AJP 3.0
Guidelines For Operational Planning (GOP)
MC 477

OT 4.2.19 Conduct Penetration, Direct Assault, and Turning Movements
Definition To conduct offensive operation that seeks to break through the enemy's defence and/or disrupt the enemy defensive systems. The turning movement is a variation of envelopment in which the attacking force passes around or over the enemy's principle defensive positions to secure objectives deep into the enemy's rear to force the enemy to abandon his position or divert major forces to meet the threat.

Guidelines For Operational Planning (GOP)
MC 477

OT 4.2.20 Conduct Direct Action in the Joint Operations Area (JOA)
Definition To conduct short-duration strikes and other small-scale actions by special operations forces in order to seize, destroy, capture, recover, or inflict damage on designated personnel or material. The purpose is to support the campaign plan. This task includes ambushes or direct assaults; the emplacement of mines and other munitions; standoff attacks; support for employment of precision guided weapons, independent

Bi-SCD 80-90

Supporting Documentation	sabotage, and anti-ship operations. AJP 1.0 AJP 3.0 Guidelines For Operational Planning (GOP) MC 477
OT 4.2.21	Conduct Unconventional Warfare in the Joint Operations Area (JOA)
Definition	To conduct military and paramilitary operations, normally of long duration, within the JOA. Included are guerrilla warfare and other direct offensive, low visibility, covert or clandestine operations, as well as indirect activities of subversion and sabotage. This task also includes, when appropriate, integration and synchronization of indigenous and surrogate forces that are organized, trained, equipped, supported, and directed by an external source.
Supporting Documentation	AJP 1.0 AJP 3.0 Guidelines For Operational Planning (GOP)
OT 4.2.22	Counter Enemy Air Attack (Defensive Counter Air (DCA)) in the JOA
Definition	To conduct operations to defeat the enemy's offensive plan and inflict unacceptable losses on attacking enemy forces. DCA consists of active and passive operations to defend friendly airspace and protect friendly forces, material, and infrastructure from enemy air and missile attack. It includes detection, identification, and destruction of attacking enemy air and missiles. It is normally conducted near or over friendly territory and generally is a reaction to the initiative of the enemy air forces.
Supporting Documentation	
OT 4.2.23	Provide Operational Air, Space, and Missile Defence
Definition	To protect operational forces from missile and air attack (including attack from or through space) by direct defence and by destroying the enemy's missile and air attack capacity. This task includes use of aircraft (including helicopters), interceptor missiles, air defence artillery, and weapons not used primarily in an air defence role. Note: This task pertains to defensive counterair, antiwar, and theatre missile defence (TMD) activities. Offensive counterair and antiwar activities are

Bi-SCD 80-90

included under operational firepower and include TMD attack operations.

Supporting
Documentation MC 400/2

OT 4.2.24
Definition

Process/Allocate Operational Aerospace Targets
To select offensive air and space threats to the operational environment and match these as targets for friendly systems. This action is taken to ensure freedom of action for campaigns and major operations and protection of key assets. To allocate specific targets to operational air defence forces for interception or engagement.

Supporting
Documentation MC 400/2

OT 4.2.25
Definition

Conduct Joint Operations Area (JOA) Missile Defence
To identify and integrate joint and coalition forces supported by national and theatre capabilities to detect and destroy enemy theatre missiles directed toward the JOA in flight or prior to launch. This task includes disrupting the enemy's theatre missile operations through an appropriate mix of mutually supportive passive missile defence, active missile defence, attack operations, and supporting C4I measures. This task includes providing early warning of theatre missile attack to the JOA as well as distribution of this warning to joint and multinational forces within the operational area. The term "theatre missile" applies to ballistic missiles, air-to-surface missiles, and air-, land-, and sea-launched cruise missiles whose targets are within the joint force commander's operational area.

OT 4.3.0
Definition

Provide Operational Counter-Mobility
To delay, channel, or stop offensive air, land, and sea movement by enemy operational formations in order to help create positional advantage for friendly joint and multinational

Bi-SCD 80-90

operational forces. Operational counter-mobility exposes enemy decisive points and centres of gravity or high-payoff targets to destruction in conformance with the joint force commander's plans and intent. This task includes execution of sanctions, embargoes, blockades, and no-fly zones.

Supporting ATP-52 (A)
Documentation AJP 3.12

OT 4.3.1 Coordinate and Restrict the Employment of Obstacles including minefields.

Definition To identify air, land, and sea sites for reinforcing or constructing obstacles to take maximum advantage of existing obstacles to form a system of obstacles (normally on a large-scale) for operational effect. The system of obstacles is intended to provide friendly force flexibility for movement and increase the variety of obstacles the enemy must encounter. This task includes developing existing obstacles and reinforcing terrain with counter-mobility means (includes air, land, and sea). Systems of obstacles include, but are not limited to, minefields, and conventional demolitions for achieving operational results in campaigns and major operations.

Supporting ATP-52 (A)
Documentation AJP 3.12

OT 4.3.2 Plan and Conduct Quarantine, Sanctions and Embargoes

Definition To carry out acts designed to exclude specific items such as offensive military weapons and associated material from movement into or out of a state. This task includes the planning and execution of operational tasks and synchronization of tactical tasks that compose the sanctions.

Supporting AJP 1.0
Documentation AJP 3.0
Guidelines For Operational Planning (GOP)
MC 477

OT 4.3.3 Plan and Conduct Blockades

Definition To take action to cut off enemy communications and commerce in order to isolate a place or region. This task includes complete blockades and lesser degrees of blockades. This task also includes the planning and execution of operational tasks and synchronization of tactical tasks, which compose the blockade.

OT 4.3.6 Conduct Naval Mine Laying Operations
Definition To conduct the employment of forces for decisive engagement, attrition, containment, neutralization, or destruction of enemy maritime surface, subsurface, and air forces and their means of support in order to secure the desired degree of maritime superiority

Supporting AJP 1
Documentation AJP 3.0

OT 4.4.0 Control or Dominate Operationally Significant Areas
Definition To control areas of the JOA whose possession or command provides either side an operational advantage, or denying it to the enemy. Denial of the operational area can be accomplished either by occupying the operationally key area

Bi-SCD 80-90

itself or by limiting use or access to the area. For an area or environment to be operationally key, its dominance or control must achieve operational or strategic results or deny same to the enemy. In military operations other than war, control of an operationally significant area also pertains to assisting a friendly country in populace and resource control.

Supporting AJP 1.0
Documentation AJP 3.0

OT 4.4.1 Control Operationally Significant Land Area in the Joint Operations Area (JOA)

Definition To control an area or geographic point or position that is important to the success of a campaign or major operation to prevent enemy occupation of the position through fire, fire potential, or occupation of the land area.

Supporting AJP 1.0
Documentation AJP 3.0

OT 4.4.2 Gain and Maintain Maritime Superiority in the Joint Operations Area (JOA)

Definition To achieve that degree of dominance in the sea campaign and major battles over opposing forces which permits the conduct of operations by friendly maritime forces and their related land, sea, air, and special operations forces at a given time and place without prohibitive interference by the opposing force in the operational area.

Supporting AJP 1.0
Documentation AJP 3.0

OT 4.4.3 Gain and Maintain Air Superiority in the Joint Operations Area (JOA)

Definition To gain control of the air to the degree which permits the conduct of operations by land, sea, and air forces at a given time and place without prohibitive interference by the opposing force in the operational area.

Supporting AJP 1.0
Documentation AJP 3.0

OT 4.4.4 Isolate Joint Operations Area

Definition To deny to a regional adversary or the adversary's supporters access to key sectors of the operational area and impede the adversary's movement of supplies by sea, land, and air from

Bi-SCD 80-90

Supporting areas outside the operational area.
Documentation AJP 1.0
AJP 3.0

OT 4.4.5 Assist Host-Nation in Populace and Resource Control
Definition To assist host-nation governments to retain control over their major population centres thus precluding complicating problems which may hinder accomplishment of the joint force commander's mission. This task includes external support for control of civil unrest and restoration of basic public services (police functions, water, electricity, garbage, basic medical care) the lack of which would precipitate civil unrest. This task relates to providing civil affairs, military police, and logistic support for the movement, collections, housing, feeding, and protection of displaced citizens.

Supporting AJP 1.0
Documentation AJP 3.0

OT 4.4.6 Control Operationally Significant Riverine Area(s) in the Joint Operations Area (JOA)

Definition To achieve and/or maintain control of a waterway system and its adjoining land area, or to deny their use to the enemy. Operations are conducted on, across, along and emanating from a waterway systems and combine the characteristics of ground, naval and air operations.

Supporting AJP 1.0
Documentation AJP 3.0

OT 4.4.7 Conduct Military Assistance

Definition To conduct military activities by providing support to the HN's program of internal defence and development. National programs are designed to free and protect a nation from lawlessness, subversion, and insurgency by emphasizing the building of viable institutions that respond to the needs of society. The most significant manifestation of these needs is likely to be economic, social, informational, or political; therefore, these needs should prescribe the principal focus of NATO efforts. Nevertheless, military assistance is often necessary in order to provide the secure environment for these efforts to become effective. These needs of society remain relevant to threats posed through illegal drug trafficking, terrorism, and civil unrest that affect all aspects of a nation's defence and development.

Bi-SCD 80-90

Supporting
Documentation MC 400/2

OT 4.5.0
Definition Conduct Combined Joint Force Targeting
To positively identify and select targets that decisively impact campaigns and major operations and match the targets to appropriate joint or multinational systems. Targeting is accomplished primarily by the individual components to attain objectives and achieve effects as directed by the JFC. The term target is used in its broadest sense to include targets in military operations other than war, such as a target audience of psychological operations in a counterinsurgency situation.

Supporting
Documentation MC 400/2

OT 4.5.1
Definition Establish Combined Joint Force Targeting Strategy and/or Direction & Guidance
To provide joint force commander's guidance and priorities for targeting and identification of requirements by components; the prioritisation of these requirements; the acquisition of targets or target systems; and the attack of targets by components. The guidance and prioritisation matches objectives and guidance with inputs from intelligence and operations personnel to select specific targets. For immediate targets, the JFC should also articulate his risk tolerance sufficiently to let on-scene commanders understand his intent when immediate targets require accelerated coordination. To be successful, pre-coordinated procedures should be in place to quickly process immediate targets for attack

Supporting
Documentation MC 400/2

OT 4.5.2
Definition Apportion Joint/Multinational Operational Firepower Resources
To apportion operational firepower means to operational targets consistent with the joint force commander's plan and intent. To determine and designate the total expected effort by percentage and/or priority that should be devoted to the various land, sea, air, and space operations and/or geographic areas for a given period of time by each component. Apportionment of firepower resources allows the joint force commander to ensure the weight of the joint firepower effort is consistent with campaign phases and objectives.

Supporting

Bi-SCD 80-90

Documentation MC 400/2

OT 4.5.3 Develop Operational Targets for Attack
Definition To evaluate and choose operational targets for attack to achieve optimum effect in support of the operational level joint force commander's intent. Related activities are found under intelligence and C2, respectively. Air targets for this task include offensive counterair targets but do not include air defence or defensive counter air targets.

Supporting
Documentation MC 400/2

OT 4.5.4 Develop High-Payoff and High-Value Targets
Definition To identify high-value targets (HVTs). HVTs are those assets the enemy requires for the successful completion of a mission. HVTs which, if successfully attacked, would contribute substantially to friendly operations, are called high-payoff targets (HPTs). This task includes prioritising the HPTs into a high-payoff target list (HPTL) and developing guidance on what and when they should be attacked and the assets used for the attack.

Supporting
Documentation MC 400/2

OT 4.5.5 Prioritise High Value Targets.
Definition To rank high value targets in the order of their importance and selected attack sequence in attacking decisive points and defeating adversary's centres of gravity within the context of the commander's operations plan.

Supporting
Documentation MC 400/2

OT 4.5.6 Publish Orders for Employment of Operational Firepower.
Definition To assign missions to targets and specific tasking to each joint force subordinate command. Typically, this task pertains to the air tasking order (ATO) performed by the JFACC, or designated appropriate operations centre.

Supporting
Documentation MC 400/2

OT 4.5.7 Conduct Operational Combat Assessment.

Bi-SCD 80-90

Definition	To determine the overall effectiveness of joint and multinational forces employed in the operational area, including force engagements, as it relates to strategic and operational objectives in subordinate campaigns and major operations.
Supporting Documentation	MC 400/2
OT 4.5.7.1 Definition	Assess Battle Damage on Operational Targets. To conduct timely and accurate estimate of damage resulting from the application of military force either lethal or non-lethal against predetermined operational objectives. Although primarily an intelligence responsibility in the targeting process, inputs from operators are required to complete the process. BDA can be applied to all types of systems throughout the range of military operations.
Supporting Documentation	MC 400/2
OT 4.5.7.2 Definition	Assess Ordnance /Munitions Effects on Operational Targets. To evaluate damage from munitions employed to determine more effective munitions or attack methodologies for continuing attacks on targets. Although primarily an operational responsibility in the targeting cycle, inputs from the intelligence community are required to complete this process.
Supporting Documentation	MC 400/2
OT 4.5.7.3 Definition	Assess Re-attack Requirement. To evaluate the overall impact/effectiveness of operations against the enemy and any changes/efforts needed to take place to meet the operational commander's targeting objectives. This task includes special attention given to targeting operations and objectives.
Supporting Documentation	MC 400/2
OT 4.6.0 Definition	Attack Operational Targets To engage operational level targets and to shape and control the tempo of campaigns using all available joint and multinational operational firepower (includes ground, naval, air, space, and SOF conventional and special munitions) against

Bi-SCD 80-90

	land, air, and maritime (surface and subsurface) targets having operational significance. Operational targets can be conventional, C-IED, or CBRN weapon related.
Supporting Documentation	MC 400/2
OT 4.6.1 Definition	Attack Adversary's Operational Land/Maritime Targets To attack operational land and maritime targets with available operational firepower systems. To delay, disrupt, destroy, or degrade adversary's operational forces or critical tasks and facilities and to affect the adversary's will to fight.
Supporting Documentation	MC 400/2
OT 4.6.2 Definition	Provide Anti Surface Force Air Operations in support of Surface Forces To support land and maritime operational manoeuvre as part of the joint operation plan by engaging operational land, maritime, and air targets with available operational firepower systems.
Supporting Documentation	MC 400/2
OT 4.6.3 Definition	Conduct Attack on Operational Targets Using Non-Lethal Means To engage operational targets with non-lethal joint and multinational means designed to degrade, impair, disrupt, or delay the performance of enemy operational forces, tasks, and facilities. The means include the use of psychological operations, special operations forces, electronic attack, and other IO capabilities. Under certain circumstances, this task may apply within the NATO territory with limitations.
Supporting Documentation	MC 400/2
OT 4.6.3.1 Definition	Employ PSYOPS in JOA To plan and execute psychological operations to convey selected information and indicators to approved target audiences in the operational area to influence and change their perception, attitude and behaviour. PSYOPS actions are aimed at making the adversary leadership, military personnel, or population modify their behaviour in ways that are

Bi-SCD 80-90

	favourable to allied/coalition efforts in the operation area. PSYOPS activities are integrated and/or coordinated with other INFO OPS activities within the area of operation (AOO) and with other relevant government informational activities within the operational area.
Supporting Documentation	MC 422/3 AJP 3.10 (Study draft as at 30 OCT 03)
OT 4.6.3.1.1	Plan Psychological Operations in support of the Military Information Strategy, approve PSYOPS SUPLANS

Definition	Conduct the whole spectrum of EW in support of operations in the JOA. EW support includes Electronic Warfare Support Measures (ESM) for EW target identification and situation awareness, Electronic Counter Measures (ECM) for immediate force protection and offensive action as part of a coordinated offensive plan and Electronic Protection Measures (EPM) to ensure maximum own use of the electro-magnetic spectrum.
Supporting Documentation	MC 64/9 AJP 3.6 ATP 44C ATP 51A STANAG 6009
OT 4.6.3.3	Employ Information Attack in the JOA
Definition	To employ offensive information operations capabilities to achieve operational objectives.
Supporting Documentation	To be developed.

Bi-SCD 80-90

OT 4.6.3.4	Conduct Non-lethal Attack on Personnel, Equipment, and Installations Using Non-lethal Means
Definition	To conduct non-lethal attack against personnel, equipment, and installations to neutralize or degrade their combat capability or contribution. This task includes all forms of non-lethal attack not involving PSYOP, EA, and information-based attacks.
Supporting Documentation	To be developed.
OT 4.6.4	Attack Enemy Aircraft and Missiles (Offensive Counter Air (OCA))
Definition	To attack the enemy's assets before they can be employed against friendly assets. OCA is an operation mounted to destroy, disrupt, or limit enemy air power as close to its source as possible. It seized the air initiative through taking the air war to the enemy by targeting air bases, support infrastructure, warning and control systems, TM support and launch facilities, surface-based air and missile defences, and aircraft.
Supporting Documentation	To be developed.
OT 4.6.5	Suppress Enemy Air Defences (SEAD)
Definition	To coordinate, integrate, and synchronize attacks that neutralize, destroy, or temporarily degrade surface-based enemy air defences by destructive and/or disruptive means.
Supporting Documentation	To be developed.
OT 4.6.6	Interdict Enemy Operational Forces/Targets
Definition	To coordinate, integrate, and synchronize actions that divert, disrupt, delay, or destroy the enemy's military potential (forces, nodes, LOCs, networks, and infrastructures) before it can be used effectively against friendly forces conducting campaigns and major operations in the JOA.
Supporting Documentation	To be developed.
OT 4.6.6.1	Conduct Air Interdiction of Operational Forces/Targets
Definition	To conduct air operations as part of the JFC's campaign or

Bi-SCD 80-90

	major operation to destroy, neutralize, or delay the enemy's military potential. Actions are conducted at such distance from friendly forces that detailed integration of each air mission with the fire and movement of friendly forces is not required.
Supporting Documentation	To be developed.
OT 4.6.6.2	Conduct Surface/Subsurface Firepower Interdiction of Operational Forces/Targets
Definition	To conduct land or sea operations as part of the JFC's campaign or major operation to destroy, neutralize or delay the enemy's military potential. Actions are conducted at such distance from friendly forces that detailed integration of each mission with the firepower and movement of friendly forces is not required.
Supporting Documentation	To be developed.
OT 4.6.6.3	Conduct Special Operations Interdiction of Operational Forces/Targets
Definition	To conduct special operations throughout the joint operations area (JOA) as part of the JFC's campaign or major operation to destroy, neutralize, or delay the enemy's military potential. Actions are conducted at such distance from friendly forces that detailed integration of each mission with the firepower and movement of friendly forces is not required.
Supporting Documentation	To be developed.
OT 4.6.7	Provide Firepower in Support of Operational Manoeuvre
Definition	To support land and sea joint operational manoeuvre as part of the JFC's campaign or major operation plan by engaging operational targets (except air defence, antiwar, or defensive counterair targets) with available joint and multinational operational firepower delivery systems.
Supporting Documentation	To be developed.
OT 4.6.8	Integrate/Synchronize Operational Firepower
Definition	To synchronize, and integrate as necessary, operational attacks on single or multiple operational targets at the decisive time and place. This integration includes lethal and/or non-

Bi-SCD 80-90

	lethal means and minimizing their effect on friendly forces, neutrals, and non-combatants.
Supporting Documentation	To be developed.
OT 4.6.9 Definition	Call Indirect Fire Support (*) L3.1. Units must be able to use, request and adjust fire in order to support land operations. This includes: • Selection of targets • Selection of fire attack systems • Use of illumination support • Developing plan and orders to use of heavy fire • Co-ordination of fire • Conducting of battle damage assessment (BDA) assessment • Employment of artillery forward observers (FOs) and mortar fire controllers (MFC)
Supporting Documentation	ATP-35 (B) STANAG 2934/AArtyP-1 (A). This is the principal reference.
OT 4.7.0 Definition	Conduct Precision Engagement Counter Countermeasure Operations To conduct counter countermeasure operations designed to neutralize the effects of threat defensive countermeasures aimed at degrading/neutralizing our ability to compile a high value asset target list as well as our ability to attack these high value targets with precision engagement
Supporting Documentation	To be developed.
OT 4.7.1 Definition	Provide Intelligence Collection Sensor Counter Countermeasures To provide counter countermeasure information for Intelligence Collection Planning. This task includes: assessing threat countermeasures to intelligence collection sensors; selecting appropriate counter countermeasure operations to improve intelligence collection sensor performance in the identified threat countermeasure environment; developing Counter Countermeasure input to Intelligence Collection and related OPLANs; assessing counter countermeasure effectiveness and adjusting plan input as needed.
Supporting	To be developed.

Documentation

OT 4.7.2
Definition Provide Precision Engagement Counter Countermeasures
To provide counter countermeasures for inclusion in Precision Engagement Planning. This task includes: reviewing the high valued asset target list and associated threat countermeasure environment.; reviewing precision engagement mission assignments; assessing and select appropriate counter countermeasures operations to improve precision guided weapons and associated target acquisition performance in the identified threat countermeasure environment and developing mission tailored counter countermeasure operational input to Precision Engagement OPLANS. Assessing counter countermeasure effectiveness and adjust plan input as needed.

Supporting
Documentation To be developed.

OT 4.8.0
Definition Provide Public Information in the JOA
To advise and assist the commander in the JOA and coalition partners in telling the command's story to both internal and external audiences, by originating and assisting civilian news media in originating both print and broadcast news material and assisting with community relations projects. This task includes establishment of a Joint Information Bureau (JIB) and support of the Allied Media Pool until open media coverage is possible.

Supporting
Documentation To be developed.

OT 4.8.1
Definition Manage Media Relations in the JOA
To provide support to the commander in ensuring the timely and correct telling of the command's story. This task includes actions taken to provide the command story to civilian news media as well as military information sources. This task can be performed in a stand-alone NATO environment, with coalition partners or a HN or in conjunction with a Country Team. This task also includes establishment and operation of a JIB and support for the Allied Media Pool as directed by the joint force commander.

Supporting
Documentation To be developed.

Bi-SCD 80-90

OT 4.8.2	Coordinate Command / Internal Information Programs In the JOA
Definition	Coordinate with subordinate and component commands to ensure that internal information requirements are being addressed. This includes supporting employment of Allied Forces Radio and Television Services (AFRTS) in theatre and assisting in the coordinated distribution of print media products. In addition, coordination for the production of command information products and the procurement and distribution of Service publications may be accomplished.
Supporting Documentation	To be developed.
OT 4.8.3	Coordinate Combat Camera Activities
Definition	To coordinate combat camera teams and personnel in the joint operations area (JOA) to acquire imagery in support of ongoing operations. Supported activities include intelligence, battlefield damage assessment, IO, PA, deception, training, civil affairs, legal, and history functions.
Supporting Documentation	To be developed.
OT 4.9.0	Develop Civil-Military Co-operation (CIMIC) Plans and Initiatives (*) G.7.1
Definition	CIMIC staffs are an integral part of commander's staff. They are to ensure that all appropriate civil factors are incorporated into commander's plans and conduct of operations. By doing so they contribute towards the cohesion of the international community's multifunctional efforts in crisis resolution and the creation and sustenance of the conditions that support the achievement of a lasting solution to a crisis. Therefore, CIMIC staff officers must be fully acquainted with the place of CIMIC in NATO-led operations, operational environment and organisation, and command and control principles. In addition, they must be familiar with the decision-making process in NATO and the types and nature of civilian organisations associated with CIMIC activities. CIMIC personnel are required to create and sustain conditions that support the achievement of a lasting solution to a crisis. Therefore, CIMIC personnel must be fully acquainted with operational environment and they must be familiar with the decision-making process in NATO and the types and nature of civilian organisations associated with CIMIC operations.

OT 4.10.1.4 Allocate Forces and Resources to Subordinate HQ in Support of Info Ops

Definition

At the operational level, armed forces are deployed and employed to attain strategic and/or campaign objectives within the Joint Operations Area (JOA). The Operational Commander (OPCOM) refines the Campaign for the JOA, creates the operational plan and directs operations. He will be among other things responsible for allocating forces and resources as necessary for subordinate Commanders to execute their Military Information Operations Action Plans (MIOAPs). The OPCOM will maintain the capability to change the emphasis of the Mil INFO Campaign (MIC) to react to developments. At the tactical level, forces are employed to conduct military tasks and gain military objectives. Mil INFO OPS focuses on neutral and adversary Key decision makers (KDMs), their decision-making and INFO systems. Co-ordinated Mil INFO OPS activities to achieve these effects are vital to the success of the MIC, while conducting activities to protect one's own information and information systems.

OT 4.10.2

Conduct Deception Operations in Theatre

Definition

To manipulate adversary's operational level commander's perceptions and expectations into a false picture of reality that conceals friendly actions and intentions until it is too late for opposing forces to react effectively within the context of the commander's deception plan. Several measures are available for conducting deception, to include physical, technical or electronic (imitative, manipulative, and simulative), and administrative.

Supporting

Documentation AJP 3.10 (Study draft as at 30 OCT 03)

OT 4.10.2.1

Develop Operational Deception Plan

Definition

To develop a plan with measures designed to mislead the adversary by manipulation, distortion, or falsification of evidence to induce a reaction in a manner prejudicial to the adversary's own interests. The focus of the deception is on the adversary's counterpart to the friendly operational level commander. To develop and disseminate the deception plan and story. To deceive the adversary's commander of the true friendly intentions regarding the operations, the plan must be consistent with the strategic deception plan and focused on adversary's expectations, preconceptions, and fears

Bi-SCD 80-90

concerning friendly intent. The deception plan should use the entire operational forces and strategic means, as appropriate, to deceive the adversary.

OT 4.12.12
Definition

Conduct Military Assistance

To conduct military activities by providing support to the HN's program of internal defence and development. National programs are designed to free and protect a nation from lawlessness, subversion, and insurgency by emphasizing the building of viable institutions that respond to the needs of society. The most significant manifestation of these needs is likely to be economic, social, informational, or political; therefore, these needs should prescribe the principal focus of NATO efforts. Nevertheless, military assistance is often necessary in order to provide the secure environment for these efforts to become effective. These needs of society remain relevant to threats posed through illegal drug trafficking, terrorism, and civil unrest that affect all aspects of a nation's defence and development.

Definition Conduct Non-combatant Evacuation
Tactical operations involving land, sea and air forces to evacuate Allied Nationalities' dependents, NATO employees, and private citizens (NATO, partners and Third-country) from locations in a foreign country or HN to a designated area within the theatre.

Supporting Documentation In development.

TT 4.3.22.1
Definition Establish and Operate Evacuation Control Centre
A specific location where, during a crisis, organisations will co-ordinate and control all activities that are related to the evacuation of people. The participants may consist of representatives from national and local governments, international and non-governmental organizations and military forces. The lead of the Evacuation Control Centre will depend on the nature of the crisis.

Supporting Documentation AJP 3.0

TT 4.3.23
Definition Conduct Anti Surface Force Air Operations
To provide support for amphibious and/or land operations by air assets through attacking hostile targets in close proximity to friendly forces.

Supporting Documentation AJP 3.0

TT 4.3.24 Conduct ASUW Operations with Air Units (*) M 2.14.

Bi-SCD 80-90

Definition The role of aviation in Anti-Surface Warfare (ASUW) operations can be divided into four elements: search, identification, shadow, and attack. During the attack phase, maritime aviation aircraft may be required to provide support to submarines, surface combatants and/or tactical aircraft as well as conducting a coordinated attack with its own weapons. This will require the aviation unit to transmit an accurate surface picture along with additional coordinating information.

STANAG 1181/ATP-37

TT 4.7.0 Conduct Tactical Targeting

Definition To select air, ground, and maritime targets and match the appropriate response to them, taking into account operational requirements and capabilities. Targets can include populations as target audiences of PSYOP activities in war or in advising friendly forces in military operations other than war.

Supporting Documentation AJP 3.0

TT 4.7.1 Identify and nominate Targets for the JTL/JPTL

Definition To analyse each target to determine for inclusion of not into the Joint or Joint Prioritised Target List for further decision for targeting

Supporting Documentation AJP 3.0

TT 4.7.2 Identify and Select Approved Targets to Attack

Definition To analyse each target to determine if and when it should be attacked. This task includes: determining target selection standards; comparing sensor data to target selection standards; performing target duplication checks; determining moving target intercept points; creating target build-up reports; creating a target nomination list; performing target file maintenance; and choosing targets.

Supporting Documentation AJP 3.0

Bi-SCD 80-90

TT 4.7.3 Definition	Select Fire Attack System To determine the appropriate attack system for a particular air, ground, or maritime target. This task includes determining the attack system that can provide the required effects and its availability, and selecting the system. Normally, in combined joint operations, a joint force air component commander (JFACC) will have OPCON of air and/or air defence systems for selecting and attacking targets.
Supporting Documentation	AJP 3.0
TT 4.7.4 Definition	Develop Order to Fire To create instructions to engage or open fire (such as selected target, required effects, time on target) for transmission to the selected attack system. This task includes conducting tactical fire control, conducting technical fire direction, issuing commands to engage or open fire, or an air tasking order (ATO), and issuing a message to an observer/requester.
Supporting Documentation	
TT 4.7.5 Definition	Assess Attack & Conduct Tactical Combat Assessment To determine the overall effectiveness of force employment during tactical military operations. Combat assessment is composed of three major components, to include battle damage assessment (BDA), ordnance effects assessment, and re-attack recommendations. The objective of combat assessment is to identify recommendations for the course of military operations.
Supporting Documentation	AJP 3.0
TT 4.8.0	Plan and Integrate Tactical Military Information Operations (Mil INFO OPS)

Bi-SCD 80-90

Definition To integrate the offensive and defensive actions involving information, information-based processes and systems, and PSYOPS activities. This includes INFO OPS actions to prevent effective operational command and control (C2) of adversary forces by influencing, degrading, or destroying their operational C2 system and protecting friendly C2 through a planned protection effort. This task includes the integration of such activities with the other elements of the campaign plan and major operations and their execution.

Supporting Documentation AJP 3.10 (Study draft as at 30 OCT 03)

TT 4.8.1 Employ Tactical Military Information Operations (Mil INFO OPS) Forces and Capabilities

Definition To conduct offensive and defensive information operations (INFO OPS) for implementing NATO's INFO strategy, policy, objectives and operations at the theatre level. This task includes planning, synchronization and use of operations security (OPSEC), information security (INFOSEC), military deception, psychological operations (PSYOPS), electronic warfare (EW), computer network operations (CNO); and physical destruction, mutually supported by Intelligence (INTEL), to influence decision-making of adversaries in support of the Alliance overall objectives by affecting their information-based processes and systems while exploiting and protecting one's own. If in support of homeland security, legal restrictions may apply.

Supporting Documentation MC 422/3
AJP 3.10 (Study draft as at 30 OCT 03)

TT 4.8.2 Plan and Coordinate Military Information Operations Action Plans (MIOAPs)

Bi-SCD 80-90

Definition For the Tactical Commander, where the span of influence and direct effect is consolidated into one Domain, the use of discrete Military Information Operations Action Plans (MIOAPs) is required. These MIOAPs are likely to be specific to individual targets and may address a short term. The targets may be any aspect of the info domain including a standing internal MIOAP for protection and exploitation of own information. Contingency plans may be prepared for pre-planned responses to certain recurring events or likelihood's. These may be transmitted as Fragmentary Orders (FRAGOs), or using other formats such as regular message traffic or as attachments to secure intranet e-mails. Component Commanders and local Commanders are required to implement the MIOAPs, which they developed in support of Commander's intent and MIOAPs and to refine them continuously through the INFO OPS co-ordination process. By reference to the MIC and MIOAPs, relevant and prioritised objectives, targets and effects can be chosen or sub objectives created to support the components military plans, which in turn support the overall Campaign.

Supporting Documentation AJP 3.10 (Study draft as at 30 OCT 03)

TT 4.8.3 Conduct Military Information Operations (Mil INFO OPS)
Activities to Protect and Exploit own Information Systems

Definition Military Information Operations (Mil INFO OPS) are co-ordinated actions to influence decision-making of adversaries in support of the Alliance overall objectives by affecting their information, information-based processes and systems while exploiting and protecting one's own. INFO OPS pertain to activities at all levels of Alliance operations and contains both defensive and offensive activities.

Supporting Documentation MC 422/3
AJP 3.10 (Study draft as at 30 OCT 03)

TT 4.8.4 Analyse Military Information Campaigns (MICs) to Determine Tactical Objectives

Bi-SCD 80-90

Definition	The accomplishment of operational level Military Information Operations Objectives (MIOO) carefully selected and sequenced through Mil INFO OPS Plans (MIOP) for the different phases of a Joint Force Command (JFC) operation, will contribute to achieving the Military INFO Campaign (MIC), whilst also contributing to the success of the overarching NATO INFO Strategy. In the case of routine activities, the creation of perceptions is not only restricted to the political and strategic levels, but more importantly occurs at the operational HQs and unit levels. HQs involved in their conduct of normal activities must realise that many activities create effects and secondary effects
Supporting Documentation	AJP 3.10 (Study draft as at 30 OCT 03)

TT 4.8.5	Employ Information Security (INFOSEC) Practices and Procedures
Definition	The co-ordination required between Force Protection (FP), Operational Security (OPSEC), Information Operations (INFO OPS), Information Security (INFOSEC), and the Security element is critical to a successful defensive INFO OPS. Synchronizing these staff elements and requesting assistance from external organisations for specific capabilities will ensure a coherent and integrated defensive INFO OPS posture that enables the command to conduct operations with the knowledge that its own information cycle is protected. J6 will be responsible for INFOSEC and identifies Communications and Information Systems (CIS) vulnerabilities and develops procedures and capabilities to protect friendly Battle Management Consultation, Command, Control, communications and information systems. J6 will develop INFOSEC Plans and supports Mil INFO OPS development of OPSEC plans. J6 assesses impacts of others' offensive INFO OPS on own systems and co-ordinates specialist support relating to protection of own CIS
Supporting Documentation	AJP 3.10 (Study draft as at 30 OCT 03)

TT 4.8.6	Employ Concealment and Deception Techniques
----------	---

Bi-SCD 80-90

Definition J5 integrates Military Information Operations (Mil INFO OPS) planning into the deliberate planning process. This includes the Deception planning and supports the Mil INFO OPS effort through the Joint Operations Planning Group (JOPG) process. For an Operational Security (OPSEC) officer OPSEC, deception and the corresponding development of essential elements of friendly information and friendly forces information requirements are key to synchronising the INFO OPS plans and activities. The OPSEC officer is a member of the Information Operations Co-ordination Board (IOCB).

Supporting Documentation AJP 3.10 (Study draft as at 30 OCT 03)

TT 4.8.7 Definition Plan and Conduct Tactical Deception
Plans should always be considered for sensitivity marking if they address deception, the use of special information technology, political sensitivities or if plans involve using Special Forces activities.

Supporting Documentation AJP 3.10 (Study draft as at 30 OCT 03)

TT 4.8.8 Definition Assess Effectiveness of Tactical Deception Plan
The effects of INFO OPS activities can be difficult to observe and assess and plans may take a long time to achieve their objectives. This can result in apparently little "bang for the buck" initially as information attacks may be transparent to the intended target. Deception operations are a good example of this, where the lack of activity/movement or sensor activity is evidence that the info targeting is working.

Supporting Documentation AJP 3.10 (Study draft as at 30 OCT 03)

TT 4.8.9 Definition Execute Deception Plans
To prevent the enemy from learning the true intent of the joint force commander's campaigns and major operation plans and deception plans. This activity includes limiting, to the last possible moment, the number of people aware of friendly plans; delaying or masking operational movements and preparations; and deceiving friendly leaders and personnel where necessary.

Supporting Documentation AJP 3.10 (Study draft as at 30 OCT 03)

Bi-SCD 80-90

TT 4.8.10 Definition	Conduct PSYOPS To plan and direct PSYOPS activities for the supported commander to influence the emotions, motives, objective reasoning, and ultimately the behaviour of identified and approved target audiences. Ensure integration and synchronisation with all other operations.
Supporting Documentation	MC 402/1 AJP 3.10.1
TT 4.8.11 Definition	Conduct EW Conduct the whole spectrum of EW in support of the tactical commander. EW support includes Electronic Warfare Support Measures (ESM) for EW target identification and situation awareness, Electronic Counter Measures (ECM) for immediate force protection and offensive action as part of a coordinated offensive plan and Electronic Protection measures (EPM) to ensure maximum own use of the electro-magnetic spectrum.
Supporting Documentation	MC 64/9 AJP 3.6 ATP 44C ATP 51A STANAG 6009
TT 4.8.12 Definition	Conduct Media Operations & Press Relations To provide support to the commander in ensuring the timely and correct telling of the command's story. This task includes actions taken to provide the command story to civilian news media as well as military information sources. This task can be performed in a stand-alone US environment, with coalition partners or a HN or in conjunction with a Country Team. This task also includes establishment and operation of a JIB and support for the NATO Media Pool as directed by the joint force commander.
Supporting Documentation	STANAG 2437/AJP 1 (B) AD 95-1
TT 4.9.0	Plan and Conduct Public Information Activities (*) G 6.3.

Bi-SCD 80-90

Definition	Designated officers must be able to implement public information activities. In particular Public Information Officers will require training in interviewing techniques, writing press releases, organizing press briefings and producing prints, photographic and video materiel for general public. They must be able to interface with the news media at all levels.
Supporting Documentation	STANAG 2437/AJP 1 (B) AD 95-1

TT 4.10.0 Definition	Conduct Civil-Military Co-operation (CIMIC) Activities To conduct activities to promote a positive relationship between the military forces and civil authorities/people in a friendly country or area or in an occupied country or area when military forces are present.
Supporting Documentation	AJP 9.0 CIMIC Functional Planning Guide

TT 4.10.1 Definition	Conduct CIMIC Liaison (*) G 7.2. CIMIC Liaison Officers are an integral part of commander's staff. They will be the privileged interface between civil and military in support of the commander's mission. Therefore, CIMIC Liaison Officers must be well aware of the place of CIMIC in NATO-led operations, the operational environment and organisation, and command and control principles. In addition, they must know about the decision-making process in NATO and the types and nature of civilian organisations they will work with.
Supporting Documentation	AJP 9.0 CIMIC Functional Planning Guide Tactics-Techniques-Procedures TTP 01, 03

TT 4.10.2 Definition	Establish and Operate a CIMIC Centre (*) G 7.4. CIMIC Personnel are to ensure the interface between the civil and the military in theatre. Therefore, CIMIC Personnel must be oriented about operational environment and organisation. In addition, they must be able to use the checklist appropriately.
Supporting Documentation	CIMIC Functional Planning Guide Tactics-Techniques-Procedures TTP 04

TT 4.10.3	Establish Assessment Reports (*) G 7.5.
-----------	---

Bi-SCD 80-90

Definition	CIMIC Personnel is required to deliver information about the environment in theatre. Therefore they must be able to undertake assessments and to identify the needs of the civil population and / or civil organisations. In addition they must draw appropriate conclusions in order to enable the commander to use his CIMIC means and capabilities in a force effective way.
Supporting Documentation	CIMIC Functional Planning Guide Tactics-Techniques-Procedures TTP 02, 06

Effective Command, Control and Communications (C3)

STRATEGIC TASKS (ST)

ST 5.0.0
Definition Provide Strategic Direction and Integration
To develop and revise Alliance military strategy. This is based on the Alliance security strategy for the attainment of strategic security interests, objectives, and end states.

Supporting
Documentation MC 440/2

ST 5.1.0
Definition Operate and Manage JOA C4I Environment
To operate and manage the theatre C4I systems to receive and relay strategic direction or orders from national levels. These systems are used to obtain information for the combatant commander or staff, maintain that information, and communicate it to those who need it to accomplish combatant commander objectives. Such information can include security strategy and military strategy; theatre missions and military objectives; enemy theatre forces and centres of gravity; friendly forces and vulnerabilities, in-transit visibility of forces and supply; and terrain and weather. This task includes developing an understanding of strategic guidance or an understanding of national and multinational policies, objectives, strategic aims, and other elements of national and multinational power (political, economic, informational). In addition, this task should ensure interoperability, anticipate information requirements, and program future C4 designs/architecture to best support information requirements. This activity includes interfacing with friendly, neutral and opposing civilian government authorities in the theatre. It includes the translation, retention, and dissemination of all types of information.

Supporting
Documentation MC 440/2

Conduct Mission Analysis and Develop Mission Statement and Commander's Planning Guidance
To analyse the NATO's military strategy, policy, objectives, and operations plans for specified and implied tasks, and translate these tasks into mission statements for subordinates. Mission analysis is used to determine the NATO's purpose through analysis of NATO security and NATO military strategic direction as well as appropriate guidance in alliance and coalition directions, including long- and short-term objectives for mission termination. Mission analysis leads to the identification of specified and implied tasks, selection of priorities for multiple tasks, and creation of mission statements. The mission statement is the impetus for detailed planning and is the JFC's expression of what the joint force must accomplish and why. It is framed as a clear, concise statement of the essential tasks to be accomplished and the purpose to be achieved. It is expressed in terms of who, what, when, where (task parameters), and why

Definition

Conduct Staff Analysis
To develop and modify strategic estimates based on assigned missions. Estimates are developed in light of and after reviewing the theatre strategic environment, the various threats, the nature of anticipated operations, national and multinational strategic direction, and forces available. Functionally oriented combatant commanders develop strategic estimates for each theatre they support. Operations in one theatre often affect other theatres. The interrelationships among theatres, therefore, are important in the assessment of a theatre's strategic environment and development of the strategic estimate. The strategic estimate itself acts as the basis for combatant command strategy, plans, and actions that occur in response to deliberate tasking or crises. The combatant commander's strategic estimate results in strategic concepts and courses of action—broad statements of what is to be accomplished. One of the critical parts of the estimate process is defining the strategic end state to be achieved.

ST 5.3.3
Definition Develop JOA Strategic Concepts
To develop the collective strategic concepts directed toward securing the objectives of national and multinational policy. Such concepts can be for the use of force or threatened use of force within the theatre. Theatre strategic concepts included in the strategy are statements of what, where, and how operations are to be conducted in broad, flexible terms. Theatre strategic concepts must relate ends, ways, and means, that is, to consider assigned objectives, the threat, and opportunities available in light of available resources. Included is an examination of risks involved in each proposed course of action. In the theatre strategy, geographic combatant commanders translate the strategic direction contained within the national strategy into theatre strategy and subsequent plans.

OPERATIONAL TASKS (OT)

OT 5.0.0	Provide Operational Command and Control (C2)
Definition	To exercise authority and direction by a joint force commander over assigned and attached joint and multinational forces in the accomplishment of the mission. Provides operational guidance, direction, and vision to assigned forces. Follows the theatre strategy and links operational and tactical end states. Joint force commanders employ assigned single service, joint and multinational forces to accomplish assigned missions. When directed, a joint force commander will stand-up a joint task force to plan, direct, and coordinate operations. Joint force commanders may develop and execute policies, plans, and programs. They provide interoperable C4 systems support for joint operations. This task is applicable across the range of military operations, including military operations other than war.
Supporting Documentation	Bi-SC Guidelines for Operational Planning (GOP)
OT 5.0.1	Monitor Strategic Situation
Definition	To be aware of and to understand national and multinational objectives, policies, goals, other elements of national and multinational power (diplomatic, economic, informational), political aim, and the geographic combatant commander's strategic concept and intent.
Supporting Documentation	Bi-SC Guidelines for Operational Planning (GOP)
OT 5.1.0	Acquire and Communicate Operational Level Information and Maintain Status
Definition	To obtain information on the joint operations area (JOA) military objectives, enemy operational forces and centres of gravity, friendly operational forces, terrain, and weather for JFCs, staffs, and subordinates. To translate this information into usable form and to retain and disseminate it to subordinate JTFs and functional and Service components. This activity includes informing and advising the operational level commander and securing an understanding of strategic guidance or an understanding of national and multinational policy, objectives, strategic aims, other elements of national and multinational power (for example, political, economic, informational), and theatre strategic objectives. This task includes interfacing with friendly and enemy (in occupied

A-5-17

Bi-SCD 80-90

territory) civilian government authorities in the JOA. This activity includes disseminating any type of information via necessary C4 systems.

Definition	To coordinate IA procedures established by the joint force commander for forward deployed operations.
Supporting Documentation	Bi-SC Guidelines for Operational Planning (GOP)
OT 5.1.7	Provide Positive Identification of Friendly Forces Within the JOA
Definition	To determine discretely and positively, by any means the individual identity of forces, objects (military formations), or phenomena (such as communications electronic patterns). The objective of this task is to protect friendly and neutral forces, objects, or phenomena from attack by operational level forces or systems. This task facilitates the concentration of effort against the adversary.
Supporting Documentation	Bi-SC Guidelines for Operational Planning (GOP)
OT 5.2.0	Assess Operational Situation
Definition	To continuously evaluate information received through reports or the personal observations of the commander on the general situation in the area of operations and conduct of the operation. In particular, this activity includes deciding whether different actions are required from those that would result from the most recent orders issued. This includes evaluating operational requirements in terms of doctrine, training, materiel and concepts.
Supporting Documentation	Bi-SC Guidelines for Operational Planning (GOP)
OT 5.2.1	Review Current Situation (Project Branches)

A-5-21

Bi-SCD 80-90

Definition To examine operational information developed by senior headquarters, the CJFC's staff, and subordinate components and/or task forces. This includes analysing the assigned mission (includes assigned strategic military and politico-military objectives) and related tasks in the context of the next higher echelon's campaign plan or operation order, the strategic aim. It also involves combining on hand with incoming information while separating critical from non-critical information.

Supporting Documentation Bi-SC Guidelines for Operational Planning (GOP)

OT 5.2.2 Definition Formulate Crisis Assessment
To analyse the situation through available intelligence and determine whether a military option should be prepared.

Supporting Documentation Bi-SC Guidelines for Operational Planning (GOP)

OT 5.2.3 Definition Project Future Campaigns and Major Operations (Sequels)
To see beyond immediate battles and estimate enemy's future actions and to anticipate friendly actions for employment of operational forces after each phase of a current campaign or major operation (sequels). This includes consideration of possible local reversals or tactical failures.

Supporting Documentation Bi-SC Guidelines for Operational Planning (GOP)

OT 5.3.0 Definition Prepare Operational Plans and Orders
To make detailed plans, staff estimates, and decisions for implementing the geographic combatant commander's theatre strategy, associated sequels, and anticipated campaigns or major operations. Plans and orders address, among other things, centres of gravity, branches, sequels, culminating points, and phasing. Planning includes organizing an effective staff, structuring and organizing the force, considering multinational capabilities/ limitations, and cross-levelling or balancing Service component, joint, and national C4 means. Plans should address specific missions and tasks for subordinate joint or multinational task forces, Service and functional components and supporting commands and agencies. Plans should specify main effort(s) and supporting and supported relationships by phase. Planning also should address rules of engagement for force employment. This activity includes determining solutions to operational level

A-5-22

Bi-SCD 80-90

needs. All plans and orders must maximize the operational capability while simultaneously minimizing the risk to the force.

OT 5.3.14 Implement Electromagnetic Spectrum Management, Policy, Plans, Programs, and Direction

Definition To provide JTF electromagnetic spectrum management. Submit coordinate, and deconflict frequency and host-nation support requests. Anticipate JTF frequency requirements. Disseminate theatre/JTF techniques and procedures for frequency management during contingency operations. This task includes developing JTF communications electronic operation instructions (JCEOI), coordinating with subordinate units to ensure effective frequency management, and developing the joint restricted frequency list.

Supporting Documentation To be developed.

OT 5.3.15 Establish a tasks in support of campaign plan or operation plans and orders

Definition To analyse applicable tasks assigned and derived through the Operational Planning Process including mission analysis of joint operational plans, NATO doctrine, relevant directives, inter alia, and select for training only those NTL tasks that are essential to accomplish the Headquarters' assigned mission.

Supporting Documentation To be developed.

OT 5.3.16 Establish and maintain relationships with civil organisations and agencies

Definition Establish and maintain integrated planning and close-working

A-5-27

Bi-SCD 80-90

Supporting Documentation	level relationships between military and appropriate civil organisation and agencies before and during operational planning. AJP 9.0 MC 411/1 CIMIC Functional Planning Guide (draft)
OT 5.4.0 Definition	Command Subordinate Operational Forces To promulgate the interrelated responsibilities between commanders, as well as the authority of commanders in the chain of command. Clear delineation of responsibility among commanders up, down, and laterally ensures unity of command which is a foundation for trust, coordination, and the teamwork necessary for unified military action. All lower echelon commanders must understand their mission (and communicate to their subordinates), their contribution to achievement of the commander's concept and intent, and their relationship to attainment of a higher or supported commander's operational objectives. This facilitates maximum decentralized conduct of campaigns and major operations utilizing either detailed or mission-type plans and orders as the situation and time permit.
Supporting Documentation	AJP 3.3
OT 5.4.1 Definition	Approve Plans and Orders To obtain the commander's approval and the next higher commander's approval of fully rationalized combined joint plans and orders prior to issuance.
Supporting Documentation	AJP 3.3
OT 5.4.2 Definition	Issue Plans and Orders To submit orders, plans, and reports for transmission to subordinate, supporting, or attached units for execution and to adjacent and higher units for coordination.
Supporting Documentation	AJP 3.3
OT 5.4.3 Definition	Issue Rules of Engagement To provide operational commander's directive, which delineates the circumstances and limitations under which

Bi-SCD 80-90

Supporting Documentation forces will initiate and/or continue combat engagement.
AJP 3.3

OT 5.4.4
Definition Synchronize/Integrate Operations
To arrange land, air, and maritime operational forces in time, space, and purpose to produce maximum relative combat power at the decisive point. Synchronization ensures all elements of the operational force, including supported agencies' and nations' forces are efficiently and safely employed to maximize their combined effects beyond the sum of their individual capabilities.

Supporting Documentation AJP 3.3

OT 5.4.5
Definition Coordinate/Integrate Components, Theatre, and Other Support
To coordinate with coalition partners; component commands, and adjacent, subordinate, higher, and supporting organizations to ensure cooperation and mutual support, a consistent effort, and a mutual understanding of the joint force commander's priorities, support requirements, concept and intent, and objectives.

Supporting Documentation AJP 3.3

OT 5.4.6
Definition Conduct Operational Rehearsals
To coordinate rehearsals for operational level operations or to actually conduct commander and/or staff rehearsals within the headquarters. Rehearsals provide a venue for learning, understanding, and practicing a plan/order in the time available before actual execution. Rehearsing key combat and logistical actions allows participants to become familiar with the operation and visualize the plan.

Supporting Documentation AJP 3.3

OT 5.4.7
Definition Provide Airspace Control
To provide for safe transit of air mobility aircraft and the prevention of mutual interference between the air mobility aircraft and other aircraft operating in the joint operations area. This task includes providing for the coordination, integration, and regulation of airspace of defined dimensions.

Bi-SCD 80-90

Supporting Documentation AJP 3.3

OT 5.4.8
Definition Apply NATO Airspace Control Doctrine (*) A 1.3.
Positive control of airspace in an integral part of NATO operations doctrine. Staff officers who have been selected to augment Air HQs during operations must be familiar with NATO airspace control doctrine. They should be able to advise local commanders on the nature and extent of the airspace control measures in force. They must be able to correctly interpret Airspace Control Plans (ACP) and be able to draft Airspace Control Orders (ACO). Successful completion of NATO-accredited staff officer, air staff and airspace control/airspace management training courses is required for certification, together with on-the-job training in NATO-led air operations or air exercises. Experience of operating alongside NATO airspace control/airspace management officers during appropriate NATO-led air operations or air exercises is required for those officers who will fill executive airspace control/airspace management posts within a deployed NATO Air HQ.

TT 5.4.7
Definition

Coordinate Battlespace Manoeuvre and Integrate With Firepower
Tactical coordination and integration of land/air/sea units to conduct battlespace manoeuvre and firepower employment. Battlespace is the environment, factors, and conditions that must be understood to successfully apply combat power, protect the force, or complete the mission. This includes the air, land, sea, space, and the included enemy and friendly forces; facilities; weather; terrain; the electromagnetic spectrum; and the information environment within the operational areas and areas of interest. Firepower is the amount of fire that may be delivered by a position, unit, or weapon system. Manoeuvre is 1) A movement to place ships or aircraft in a position of advantage over the enemy. 2. A tactical exercise carried out at sea, in the air, on the ground, or on a map in imitation of war. 3. The operation of a ship, aircraft, or vehicle, to cause it to perform desired movements. 4. Employment of forces on the battlefield through movement in combination with fire, or fire potential, to achieve a position

TT 5.9.9	Prepare Maritime Orders and Instructions (*) M 2.3.
----------	---

Bi-SCD 80-90

Definition	In general, the preparation of orders and instructions follows a well-developed format and process. As a staff planner you will be required to work, in close cooperation with other staff officers, on the development of maritime orders (including supporting annexes and appendices) and instructions for exercises and operations. The task requires knowledge of the planning process, detailed coordination with other staff or service branches and the detailed procedures for developing a maritime task organization. The preparation of orders and instructions includes: a detailed understanding of maritime HQ organizations at all levels; a detailed understanding of task, type and warfare organizations at sea; and knowledge of compositions from Task Unit (TU) to Extended Task Force (ETF).
Supporting Documentation	STANAG 2437/AJP 1.0(B) STANAG 3680/AAP-6 MTP-1 D Vol I EXTAC 1006 STANAG 2014

TT 5.9.10 Definition	Develop ATC Facilities, Procedures and Airfields (*) A 1.6. The deployment of forces in support of NATO-led operations may require the use of national airfields and ATC facilities that should comply with published international standards for ATC facilities, procedures and airfields. It follows that NATO/ICAO standards should be applied whenever airfields and ATC facilities are being improved or upgraded, so that aircraft supporting NATO-led operations may utilize them. Scheduled periodic maintenance check-ups for all ATC facilities, and airfields must be established. Procedure specialists should be contracted where national civilian and military staffs lack the necessary expertise and experience. Systems should be upgraded in line with changing technology to meet stated overall future system needs. Commercial off-the-shelf solutions can offer significant benefits in terms of both cost and in-service (delivery) dates. Primary, backup, no-break and UPS power supply and distribution systems for essential ATC facilities (radio, radar etc.) should be maintained and developed where appropriate, in accordance with NATO/ICAO requirements. Staff development training for ATC personnel should include English to SLP 3333.

Logistics Sustainability

STRATEGIC TASKS (ST)

ST 6.0.0	Sustain Forces
Definition	To provide logistics and personnel support activities required to sustain the force in campaigns and major operations within the theatre. The logistic concept should support theatre activity by properly direct and coordinate support from the Allied Nations and/or Partners' to the Joint Operation Area (JOA). At the theatre level, specific considerations include identification of operational requirements and establishment of priorities for the employment of the resources provided. A theatre of operations/joint operations area sustaining base, links strategic sustainment to Operational and subsequent tactical CSS. In military operations other than war, the activities under operational support also pertain to support of NATO forces, other NATO agencies, and forces of friendly countries or groups being supported by NATO forces. Operational support includes sustaining the tempo and the continuity of operations throughout a campaign or major operation. This task includes obtaining sustainment support from sources other than Military Services and includes the following: host-nation support, contractor support, Non-NATO organizations, NATO civilian support, and captured materiel.
Supporting Documentation	AJP 1.0 (B) AJP 3.0 AJP 4.0 (A) AJP 5.0 (A) MC 55/4 MC 319/2
ST 6.1.0	Plan for Sustainment of NATO Forces
Definition	To plan the necessary level and duration of logistics support required to achieve Alliance mission objectives. This task, performed in coordination with the Nations and Partners, includes development of the Logistics Concept for the operation and the Sustainment Statement, providing, maintaining, transporting, or assisting/ coordinating those levels of force, materiel, and consumables necessary to support the Operation. The logistic concept should support theatre activity by a combination of organizing multinational logistics support from the Troop Contributing Nations, Host Nation Support and Contractor Support to Operations (CSO).

Bi-SCD 80-90

ST 6.1.1 Definition	Set Sustainment Priorities To establish or coordinate priorities to support the Alliance military strategy, in order to maximize the use of available resources. This task includes the analysis and evaluation of theatre and component logistic plans, procedures, capabilities, and systems for sustainment. Additionally involved is the monitoring of sustainment resources to ensure the timely flow of stocks to operational forces.
Supporting Documentation	AJP 4.0 (A)
ST 6.1.2 Definition	Acquire, Manage and Distribute Funds To perform the resource management function of estimating costs for operations and tracking and reporting actual costs to support requests to higher levels for funding. It also includes identifying and managing funds that can be made available to theatre and operational levels to pay for immediate expenses. Finance and accounting functions include overall capturing of the costs of operations via standard accounting systems and other means, and the management of the operating systems that pay personnel and providers (contractors, host-nation suppliers, etc.).
Supporting Documentation	AJP 4.0
ST 6.1.3 Definition	Support Logistic Processes To enable, assist, and perform production, fielding/deployment, and operational support. Task includes the production and delivery of materiel, supplies, and equipment, including required support infrastructure, to the field for operational use and identifying, developing, and performing modifications to fielded systems throughout the life cycle.
Supporting Documentation	AJP 4.0

Bi-SCD 80-90

ST 6.2.0	Determine Logistic Organization and In Theatre resources requirements
Definition	To organize, activate and monitor principal and supplementary logistics organization & structure and In-theatre resources required for Theatre logistic support activities. This organization supports the theatre strategy and will conform with Alliance military policy, strategy, plans and requirements
Supporting Documentation	AJP 4 (A) AJP 4.4 AJP 4.5 (A) AJP 4.6 (A) AJP 4.9 AJP -4.10
ST 6.2.1	Determine Number and Location of Logistic Sites
Definition	To establish theatre lines of support and the location of sustaining sites to best support the theatre commander's strategy and plans and the subordinate operational commanders' campaign plans.
Supporting Documentation	AJP 4.0
ST 6.3.0	Sustain Joint Operations Area (JOA) Forces
Definition	To maintain the necessary level and duration of military activity in accordance with the logistic concept to achieve Alliance objectives. This task includes coordination of efforts in providing, maintaining, transporting, or assisting/coordinating those levels of force, materiel, and consumables necessary to support the Alliance strategy. This task will be accomplished by the supporting in-theatre logistic organization. To perform logistical support activities in the theatre required to sustain the force. Logistical support activities will aid in the execution of theatre strategy, campaigns, joint and multinational operations, using all available resources (Joint, Service, civilian, HN). Obtaining sustainment can also refer to support from sources other than Joint /Service components combat service support (CSS) organizations. This task includes sustaining the tempo and continuity of operations in a theatre of war during theatre campaigns and joint operations; sustaining military operations to support NATO forces and agencies during military operations other than war (MOOTW) using non-Service support resources; and sustaining forces using geographic combatant command resources.

ST 6.4.0 Establish and Coordinate Distribution of Supplies and Services for JOA Campaign
 Definition To maintain the timely flow of stocks (all classes of supply in large and small quantities) and services (through designated logistics organizations) to the joint operations area operational forces, in support of theatre strategy and theatre campaigns. This task includes establishing a responsive distribution network using theatre joint, multinational, or commercial transportation means (over ground, air, and sea lines of communications) that accommodates bulk movement, individual shipment of high-value repair parts. This task includes the use of the Global Transportation Network (GTN) for in-transit visibility (ITV), C2, and business operational distribution of war reserve stocks in sufficient quantity, type, and location in depth throughout the theatre to support JFC warfighting strategies. This activity includes distributing supplies and services in military operations other than war, including supported agencies and a HN.

Coordinate and Build Up Stockage Levels For JOA Campaign
To build up stockage levels, the JFC is responsible for effectively coordinating supply support between the component commanders, establishing supply build-up rates, and establishing required theatre stockage levels. This task includes identifying the Alliance capability to acquire, manage, receive, store, and issue the materiel required by the operating forces to equip and sustain them from

Bi-SCD 80-90

Supporting Documentation	deployment through combat operations and their redeployment. AJP 4.0
ST 6.4.1.4	Coordinate Maintenance Services and Parts for JOA Campaign
Definition	To coordinate and integrate maintenance and salvage within the theatre, to encompass all actions taken to keep materiel in a serviceable condition. This task includes actions to return materiel to service, or to update and upgrade its capability. Where practical, the JFC should proposed integrated maintenance facilities for joint or cross-Service use and should coordinate inter-Service use of salvage assets. However, Service peculiar item maintenance support normally remains the responsibility of the Nations. This task includes establishing theatre-wide maintenance priorities that emphasize those mission-essential weapons systems that can be rapidly returned to combat readiness.
Supporting Documentation	AJP 4.0
ST 6.4.1.5	Coordinate Strategic Transportation and Movement for sustainment
Definition	To move personnel, equipment, and supplies to sustain theatre strategy, geographic JFC's campaigns, and joint operations. Also, to allocate transportation resources for moving forces into a position to execute campaigns and joint operations. This activity includes transportation mode operations, and movement management and control. Transportation mode operations includes preparing, submitting, and processing ITV data; moving cargo, equipment, and personnel by various modes and within various levels of service (includes express movement of high-value items); and providing transportation resources to support theatre strategy, campaigns, and joint operations. Movement control includes movement control for onward movement. Terminal operations include loading, unloading, and documentation at air, water, rail, and truck terminals.
Supporting Documentation	AJP 4.4
ST 6.4.2	Coordinate Inventory Control and Movements
Definition	To orchestrate materiel inventory management of all groups of items within the NATO supply system. It also includes management of the administrative movement of personnel

Bi-SCD 80-90

	and materiel from the originating base to a NATO military command or host-nation.
Supporting Documentation	AJP 4.0
ST 6.4.3 Definition	Provide for Force Wide Base Operations Support To provide and coordinate wholesale logistics and administrative support to JFCs. This task includes the acquisition of materiel, facilities, and services. This support and these services normally are provided directly by nations to respective operational and tactical organizations as well as theatre organizations.
Supporting Documentation	AJP 4.0
ST 6.4.4 Definition	Establish Prisoner Control Policy To establish the policy for confinement of military personnel so ordered and the internment of EPWs.
Supporting Documentation	AJP 4.0
ST 6.4.5 Definition	Negotiate Host-Nation Support (HNS) To negotiate and contract for support and services from a host-nation for forces in a theatre on behalf of sending nations, as authorized by governing directives. The scope of HNS is a function of theatre asset availability, but includes a range of combat support and combat service support activities. Normally, coordination of HNS is a national responsibility arranged bi-laterally between sending nation and Host Nation. However, this task ensures that appropriate agreements are in place through general coordination and intermediation as necessary between involved parties.

Sustain Forces (*) G 4.17

The deployment of forces invariably implies a national commitment to sustain those forces while deployed. All nations must therefore be aware of the requirement to conduct site surveys prior to deployment and to initiate agreements for Host Nation, Lead Nation or Role Specialist Nation support as appropriate prior to deployment, in order to address any National requirements for personnel support or administration. NATO and Participating Nations must also initiate legal instruments such as Memoranda of Understanding and Status of Forces agreements to ensure that their units are sustainable in theatre. It follows that national requirements to sustain forces must be identified in advance of deployment.

Supporting
Documentation AJP 4.0

ST 6.5.4 Support Visiting Forces (*) G.4.16
Definition Forces operating from the territories and airspace of nations that are co-operating or participating in NATO-led operations must often provide Host Nation support. Such support is governed by bi- or multi-national legal instruments that stipulate the type of support delivered and the conditions and standards that apply. The type of support delivered will range from legal permissions, for aircraft over-flight for example, to the provision of physical or materiel assistance. This may involve the use of national or privately owned assets and facilities and could require the establishment of a commercial contract. Each support activity will require political and legal coordination to ensure that it complies with national and international law as well as the appropriate NATO standards and procedures for Host Nation, Lead Nation or Role Specialist Nation support. It follows that all personnel involved in the provision of Host Nation or other support must be capable of understanding and acting on such agreements. They must also be capable of understanding and, where applicable, initiating Memoranda

Bi-SCD 80-90

	of Understanding and Tactical Arrangements with other nations.

Bi-SCD 80-90

ST 6.5.8	Provide Multinational Integrated Logistic Units (MILUs) (*) G.4.15
Definition	Often specialist services are required by more than one contingent, but it would be wasteful for all contingents to supply the service individually. Greater efficiency can be achieved by nations, forming MILUs, with the aim of placing such MILUs under the OPCON of a NATO Commander during a specific NATO-led operation. MILUs can be formed around a nucleus provided by one nation. Such arrangements can make substantial savings to the contributing nations, although the nation providing the nucleus may not make savings and should view the commitment as valuable contribution to the operation. The pooling of assets, cost sharing, reimbursement or provision free of charge arrangements should be agreed as part of the MILU participation arrangements, based on the generic MOU for MILUs in the MILU concept and doctrine of AJP 4.9

OPERATIONAL TASKS (OT)

OT 6.0.0	Sustain the Forces at the Operational Level
Definition	To provide logistics and personnel support activities required to sustain the force in campaigns and major operations within the joint operations area. The logistic concept should support theatre activity by properly organizing support from the Allied Nations and/or Partners' base to the combat zone. At the theatre operational level, specific considerations include identification of operational requirements and establishment of priorities for the employment of the resources provided. This theatre of operations/joint operations area sustaining base, which includes the communications zone (COMMZ), links strategic sustainment to tactical CSS. In military operations other than war, the activities under operational support also pertain to support of NATO forces, other NATO agencies, and forces of friendly countries or groups being supported by NATO forces. Operational support includes sustaining the tempo and the continuity of operations throughout a campaign or major operation. This task includes obtaining sustainment support from sources other than Military Services and includes the following: host-nation support, logistic civil augmentation, NATO civilian support, and captured materiel.

Adopt the NATO Codification System (NCS) (*) G 4.2.
Codification of supplies and spare parts is an important way of executing effective supply and re-supply of contingents by user countries. Though the NCS is relatively complex and requires substantial amounts of resources over a longer period of time to emerge, several systems and modules can be used in order to implement codification. BASELOG, through AC/135 thus provides a plethora of choices among modules like provision of Codification services, training and consultation services. In addition, Nations may take advantage of the NATO Mailbox System, the NATO Master Cross Reference List, and NATO's Automated Business System (NABS). NABS is AC/135's automated document management system establishing the exchange and management of documentation in electronic format through Commercial of the Shelf (COTS) packages. This project facilitates the meetings and workload of members, diminishes manual labour and reduces the amount of hard copy volumes as well as associated costs.

TT 6.0.0	Perform Logistics, Combat Service Support, and Force Support Engineering
Definition	To sustain forces in the combat zone by arming, fueling, fixing equipment, moving, supplying, manning, maintaining visibility over, and by providing personnel and health services. Includes logistic support, as necessary, to NATO agencies and friendly nations or groups.
Supporting Documentation	AJP 1.0 (B) AJP 3.0 AJP 4.0 (A) AJP 5.0 (A) MC 55/4 MC 319/2
TT 6.1.0	Distribute Weapons, Fuel, Supplies and Provide Transport
Definition	To provide ordnance to weapon systems (includes guided/unguided ordnance, bombs, mines, torpedoes, depth charges, artillery rounds, small arms ammunition, demolition ordnance, pyrotechnics, etc.), fuel and petroleum products to all required equipment and required supplies to combat forces. Includes the provision of transportation services for the above items and personnel as required.
Supporting Documentation	AJP 3.0 AJP 4.0 MC 55/4 MC 319/2
TT 6.1.1	Supply Services and Advice
Definition	Supply covers all materiel items used in the equipment support and maintenance of military forces
Supporting Documentation	AJP 4.0(A) STANAG 2961
TT 6.1.2	Track and Account for Material
Definition	To provide a capability that allows to track all major material, logistics assets and stocks and to account them.
Supporting Documentation	STANAG 2183 STANAG 2185 STANAG 2493 STANAG 2494 STANAG 2495
TT 6.1.3	Establish Support for Refugees and Displaced Persons

Bi-SCD 80-90

Definition	To be developed.
Supporting Documentation	To be developed.

TT 6.1.4	Manage Contracts
Definition	To execute signed contracts for distribution of weapons, fuel, supplies or provide transportation.
Supporting Documentation	STANAG 4107

TT 6.1.5	Handle Hazardous Material (*) G 4.12.
Definition	Units available for NATO-led operations must be able to handle hazardous material in compliance with NATO or other international procedures. This task includes transportation of material, short and long period storing of material, documentation and marking of material and emergency procedures in the event of hazardous material leakage.
Supporting Documentation	STANAG 2828 STANAG 2829 STANAG 2827 STANAG 2927 STANAG 3854 STANAG 4280 <i>STANAG 4281</i> STANAG 4440/AASTP-1 STANAG 4441/AASTP-2

TT 6.1.6	Provide Engineer Support to C-IED Operations
Definition	To be developed.
Supporting Documentation	To be developed.

TT 6.2.0	Conduct Equipment Support in the JOA
Definition	Plan, prepare and carry out all actions to retain equipment in or to restore it to a specified condition, including inspection, testing, servicing, classification as to serviceability, repair, rebuilding and reclamation
Supporting Documentation	AAP-6

TT 6.2.1	Conduct Battle Damage Repair
Definition	Plan, prepare and carry out rapidly essential repair, which may be improvised, in a battle environment in order to return damaged or disabled equipment to temporary service.

Bi-SCD 80-90

Supporting
Documentation AAP-6

TT 6.2.2
Definition Conduct Recovery, Salvage & Back loading
Plan, prepare and carry out all actions to extract abandoned, disabled or immobilized equipment and, if necessary, the removal to a maintenance point. The process of salvage includes the removal of assemblies, sub-assemblies or components from an unrepairable item of equipment for reuse.

Supporting
Documentation AAP-6

TT 6.2.3
Definition Supply Electrical Power (*) G 4.11.
All military units have differing power requirements in terms of consumption and characteristics. Units engaged in operations are responsible for providing their own electrical generating equipment unless other arrangements for electrical supply have been arranged. When power systems are integrated into a NATO power grid, they must conform to NATO standards.

Supporting
Documentation STANAG 4133
STANAG 4134
STANAG 4135

TT 6.2.5 Definition	Conduct Replenishment at Harbour and Sea (*) M 4.2. Individual vessels, depending on their capability, must be able to replenish commodities or personnel under various weather conditions while underway or in harbour. This implies a thorough understanding of procedures, practices and drills related to refuelling abeam or astern, and the transfer of personnel and commodities while making course alterations. Emergency breakaway procedures must be practiced. A working knowledge of the interchangeability of fuels, lubricants and associated products used by NATO maritime forces is prerequisite as is a thorough knowledge of NATO standard fuel handling and safety procedures when refuelling or transferring petrol, oil and lubricants (POL).
Supporting Documentation	STANAG 1084 STANAG 1135 STANAG 1218 STANAG 1357 STANAG 1384 STANAG 1065/ATP-16 (D) STANAG 1438
TT 6.2.6 Definition	Establish En-Route Support and Clearances Prior to and During a Maritime Operation (*) M 4.1. During operations a requirement to arrange support, diplomatic clearances, and over-flight rights with affected nations for forces that are in transit from one locality to another often occur. Strategic deployments may need intermediate staging bases or areas for refuelling, regrouping of ship convoys, replenishment, exercise, inspection, and concentration or redistribution of forces. Staging bases or areas may require airfields and facilities (e.g., navigation aids, communications, maintenance and servicing facilities); augmentation support; parking and throughput facilities; construction services; health services; berths; beaches; stevedores; and utilities. Staff officers involved with en-route support and clearance must be fully conversant with governing NATO staff policy and procedures and must be capable, in consultation with legal specialists, of drafting and coordinating the necessary agreements and establishing the necessary support facilities.
Supporting Documentation	STANAG 1406/AJP -4.1 This is a principal reference. MC 319/2
TT 6.2.7	Provide Fuel Support to Visiting Aircraft (*) A 3.5.

Bi-SCD 80-90

Definition The provisions of Host Nation fuel support to aircraft during NATO-led operations must comply with NATO fuel standards and operational safety procedures. In particular, personnel must strictly apply safety distance criteria, hazard zones, speed limits, fire protection regulations, grounding and bonding regulations and flow rate limits. A necessary precursor to providing support is that the ground refuelling equipment and fuel supplies in use must be compatible with visiting aircraft fuel systems.

TT 6.3.0 Definition Conduct Joint Logistics Over-The-Shore Operations (JLOTS)
JLOTS operations are LOTS operations conducted jointly by two or more Service component forces under a joint force commander (JFC). The scope of JLOTS operations extends from acceptance of ships for offload through the arrival of equipment and cargo at inland staging and marshalling areas. LOTS is the loading and unloading of ships without the benefit of fixed port facilities in either friendly or undefended territory and, in time of war, during phases of theatre development. LOTS operations are conducted over unimproved shorelines, through fixed ports not accessible to deep draft shipping, and through fixed ports that are inadequate without the use of LOTS capabilities.

Supporting Documentation AJP 4.0

TT 6.4.0 Definition Perform Engineer Support
To contribute to the logistic support of the Force by providing direct engineer support to the Force and engineer support to the logistic effort.

Supporting Documentation AJP 3.12

Survivability and Force Protection

STRATEGIC TASKS (ST)

ST 7.1.0	Enhance Survivability
Definition	To reduce force susceptibility to detection and to reduce force vulnerability to the effects of enemy weapons. Survivability includes all aspects of protecting personnel, weapons and materiel from enemy weapon and detection systems. It may include deception measures.
Supporting Documentation	ATP 52 (A) AJP 1.0 AJP 3.0
ST 7.1.1	Reduce force susceptibility to detection
Definition	To reduce force susceptibility to detection from enemy weapon and detections systems.
Supporting Documentation	ATP 52 (A) AJP 1.0 AJP 3.0
ST 7.1.2	Reduce force vulnerability to the effects of enemy weapons
Definition	To reduce force vulnerability to the effects of enemy weapons.
Supporting Documentation	ATP 52 (A) AJP 1.0 AJP 3.0
ST 7.2.0	Protect Strategic Headquarters, Forces and Means

Bi-SCD 80-90

Definition	To conserve the operational planning, force coordination, providing for strategic guidance, and fighting potential of a joint force, including actions taken to counter the enemy taking strategic action against that force. Friendly theatre protection actions include making Service members, systems, facilities, essential personnel and strategic formations difficult to locate, strike, and destroy. This task includes identifying strategic and operational centres of gravity and protecting them, as well as, joint and multinational theatre air, space, land, and sea forces; bases; facilities; and LOCs from enemy strategic manoeuvre, concentrated enemy attack, and from the effects of chemical and biological warfare.
------------	--

Supporting
Documentation

ST 7.2.1 Definition	Provide Strategic Air Defence To protect all assets from air attack. This task involves integrating national and multinational surveillance, detection, identification, tracking, and interception systems. Strategic air defence includes the use of aircraft, air defence missiles, air defence artillery, non-air defence assets in an air defence role, electronic warfare, and other lethal and non-lethal capabilities against all air threats including aircraft, naval vessels, air-to-surface missiles, and cruise missiles. This task centres on the protection of national centres of gravity, critical facilities, strategic reserves, population centres, and industrial capacity and infrastructure.
------------------------	--

Supporting Documentation	AJP 3.0
-----------------------------	---------

ST 7.2.2	Provide Integrated Tactical Warning and Attack Assessment
----------	---

Bi-SCD 80-90

Definition To provide unambiguous, reliable, and survivable integrated tactical warning and attack assessment (ITW/AA) of atmospheric, space, and/or ballistic missile attack to President and Secretary of Defence, top echelon defence staffs and combatant commanders. Integrated tactical warning (ITW) is a continuous, real-time process that provides warning after initiation of a threatening or hostile act based upon an evaluation of information from all available sources. Attack assessment (AA) is an evaluation of information to determine the potential or actual nature and objectives of an attack. AA also characterizes the attack as to origins, patterns, regions, sources, areas at risk, destruction potential, etc. ITW/AA provides information to support timely decisions during all phases of conflict. This task includes controlling ground and space based warning systems that provide data/information for ITW/AA of an atmospheric, space, and/or ballistic missile attack.

Supporting Documentation AJP 3.0

ST 7.2.3 Definition Coordinate Strategic Ballistic Missile Defence
To coordinate the protection of strategic forces and national assets from ballistic missile attack. This task involves integrating national and multinational surveillance, detection, and identification, tracking, and interception systems to counter a ballistic missile attack. This task centres on the protection of national centres of gravity, critical facilities, strategic reserves, population centres, and industrial capacity and infrastructure.

Supporting Documentation AJP 3.0

ST 7.2.4 Definition Protect Alliance Territory and Strategic Forces and Means
To coordinate the safeguarding of friendly strategic and operational centres of gravity and force potential by reducing or avoiding the effects of enemy or terrorist actions. In military operations other than war, this activity includes protecting government and civil infrastructure. This task includes protection of non-combatant evacuees prior to departure from theatre.

Supporting Documentation AJP 3.0

ST 7.2.5 Coordinate and Conduct Strategic Operations Security
A-7-3

Bi-SCD 80-90

Definition To take actions to minimize friendly indicators associated with national military strategy. This task includes signal security (communications security and electronic security) and protection of activities (e.g., patterns), strategic forces, and facilities from enemy observation and surveillance.

Supporting Documentation AJP 3.0

ST 7.2.6 Coordinate and Conduct Deception in Support of Strategy and Plans

Definition To coordinate force protection for strategic forces and means to enhance freedom of strategic action by reducing friendly vulnerability to hostile acts, influence, or surprise. This task includes antiterrorism measures and counterintelligence actions designed to protect friendly forces from surprise, observation, detection, interference, terrorism, espionage, sabotage, intelligence collection, and assassination.

Supporting Documentation AJP 3.0

ST 7.2.7 Assist Civil Defence

Definition To assist NATO, multinational and allied nations' agencies and supporting governments in mobilizing, organizing, and directing the civil population in order to minimize the effects of enemy action or natural and technological disasters on all aspects of civil life. This task includes passive measures, such as moving into shelters.

Supporting Documentation AJP 3.0

ST 7.2.8 Coordinate Force Protection for Strategic Forces and Means

Definition To coordinate force protection for strategic forces and means to enhance freedom of strategic action by reducing friendly vulnerability to hostile acts, influence, or surprise. This task includes antiterrorism measures and counterintelligence actions designed to protect friendly forces from surprise, observation, detection, interference, terrorism, espionage, sabotage, intelligence collection, and assassination.

Supporting Documentation AJP 3.0

Bi-SCD 80-90

ST 7.2.9
Definition Coordinate and Provide Personnel Recovery
To provide Allied-level policy, plans, doctrine, exercise and operations support for the recovery of NATO (and Partners) military, civilian employees placed in danger of being isolated, beleaguered, detained, captured or having to evade capture while participating in a NATO-sponsored activity or mission.

Supporting
Documentation AJP 3.0

ST 7.2.10
Definition Coordinate Nuclear Surety
To coordinate the safety, security, and weapon level use and control of nuclear weapons. This task includes monitoring and assessing current nuclear weapons programs and procedures and providing recommendations for improvements to current nuclear weapons programs and procedures.

Supporting
Documentation AJP 3.0

ST 7.2.11
Definition Coordinate Protection of Strategic Information, Information-based Processes, and Information Systems
To co-ordinate the protection of information, information-based processes, and information systems by planning and implementing comprehensive defensive information operations (INFO OPS) measures. This is a broad task that may require a risk management approach to focus the effort. This task includes ensuring access to timely, accurate, and relevant information when and where needed, and to deny an adversary the opportunity to exploit friendly information and systems for their own purposes.

Supporting
Documentation MC 422/3
AJP 3.10 (Study draft as at 30 OCT 03)

ST 7.2.12 Provide Integrated Tactical Warning ant Attack Assessment

Bi-SCD 80-90

Definition To provide unambiguous, reliable, and survivable integrated tactical warning and attack assessment (ITW/AA) of atmospheric, space, and/or ballistic missile attack to President and Secretary of Defence, top echelon defence staffs and combatant commanders. Integrated tactical warning (ITW) is a continuous, real-time process that provides warning after initiation of a threatening or hostile act based upon an evaluation of information from all available sources. Attack assessment (AA) is an evaluation of information to determine the potential or actual nature and objectives of an attack. AA also characterizes the attack as to origins, patterns, regions, sources, areas at risk, destruction potential, etc. ITW/AA provides information to support timely decisions during all phases of conflict. This task includes controlling ground and space based warning systems that provide data/information for ITW/AA of an atmospheric, space, and/or ballistic missile attack.

Supporting Documentation AD 80-25

ST 7.3.0 Definition Coordinate Survivability and Force Protection
To conserve the fighting potential of a joint force, including actions taken to counter the enemy taking strategic action against that force. Friendly theatre protection actions include making Service members, systems, facilities, essential personnel and strategic formations difficult to locate, strike, and destroy. This task includes identifying strategic and operational centres of gravity and protecting them, as well as, joint and multinational theatre air, space, land, and sea forces; bases; facilities; and LOCs from enemy strategic manoeuvre, concentrated enemy attack, and from the effects of chemical and biological warfare. Theatre protection extends to Allied citizens (e.g., vaccines, antidotes, and individual protection equipment, and self-protective equipment), property, and territory within the Combined Joint Task Force commander's theatre.

Supporting Documentation AMedP series of documents
MC 400/2
AD 80-25

ST 7.3.1 Develop a FP Directive or Plan, SOP, to coordinate protection for HQs and Forces

Bi-SCD 80-90

Definition To comprise all measures taken and means used to minimize the vulnerability of personnel, facilities, equipment and operations to any threat and in all situations, so as to preserve the freedom of action and operational effectiveness of a force is to be formed up within an Force Protection Directive and each HQ or command are to develop its plans and SOP in order to ease the coordination for the protection measures for HQs and Forces.

Supporting Documentation AD 80-25

ST 7.3.2
Definition Provide for Protective Security
HQs and assigned units are to provide the necessary Protective Security in accordance with CM (2002) 49 and CM (2002) 50.

Supporting Documentation AD 80-25

ST 7.3.3
Definition Provide for Active Defence
HQs and assigned units are to provide effective physical defence against covert and overt intrusion into their TAOR, and within designated Vital Areas and Key Points for which they are responsible. Active Defence may demand aggressive actions to counter the threat of attack, using appropriate ground, marine or airborne combat forces, firepower and resources to deter the aggressor, defeat his attack, and, where possible, neutralise his means to pose any further threat. For most units, including maritime, this will involve the active domination of the TAOR and the crucial need to deny an aggressor suitable fire/operating bases. Active Defence will invariably require a dedicated minute-to-minute C2 capability for the control of assigned FP forces and close co-ordination with HN territorial command elements will be essential to reduce the risk of fratricide.

Supporting Documentation AD 80-25

ST 7.3.4 Provide for Passive Defence

Bi-SCD 80-90

Definition HQs and assigned units are to protect their forces from the physical effects of attack. Protective Security will provide baseline defence and protection and serve to deter criminal acts, espionage, sabotage and lower-level acts of terrorism. However, as the situation moves through crisis to conflict, Passive Defence may demand individual and collective protection from conventional weapons (e.g. small-arms, bombs, explosives, shrapnel, rockets, missiles and mines etc) and from CBRN hazards. Camouflage, Concealment and Deception (CCD) and Operational Security (OPSEC) measures can contribute significantly towards effective FP by denying an aggressor the means to target NATO forces. Similarly, the dispersal of key assets should enhance their survivability.

Supporting Documentation AD 80-25

ST 7.3.5 Definition Coordinate Search and Rescue (SAR)
To initiate and coordinate efforts to recover isolated NATO and Partner Nations' personnel, both military and civilian. This task also includes, on a not-to-interfere with military missions basis, support to the efforts of non-NATO civil SAR efforts.

Supporting Documentation AJP 3.0

ST 7.3.5.1 Definition Coordinate Combat Search and Rescue (CSAR)
To coordinate CSAR primarily in support of flight operations, with capability to support other personnel recovery requirements. It also includes providing planning and guidance to subordinate organizations, including areas such as host-nation policies, laws, regulations, and capabilities.

Supporting Documentation AJP 3.0

ST 7.3.5.2 Definition Support Evasion and Escape in Theatre
To support isolated NATO and Partner Nations' personnel in evasion, recovery, and captivity support and recovery. This task also includes those activities involved in supporting those isolated individuals who, due to unique circumstances, are affecting their own recovery.

Supporting Documentation AJP 3.0

Bi-SCD 80-90

ST 7.3.6	Plan and Provide for CBRN Defence Operations
Definition	All measures (plans and activities) intended to mitigate or neutralize adverse effects on operations resulting from the use or threatened use of chemical, biological, radiological or nuclear weapons and devices; the emergence of secondary hazards arising from counter-force targeting; or the release, or risk of release, of toxic industrial materials into the environment. It encompasses the planning, allocation of resources and training of personnel in order to achieve the CBRN defence objectives determined by the Alliance.

ST 7.3.6.1	Minimize Safety and Health Risks
Definition	Inform and protect personnel as best as possible against health hazards.
Supporting Documentation	AMedP series of documents
ST 7.3.7	Secure Theatre Systems and Capabilities
Definition	To protect friendly systems and capabilities by identifying threats and reducing or compensating for vulnerabilities.
Supporting Documentation	AJP 3.0
ST 7.3.7.1	Employ Theatre Operations Security (OPSEC)

Bi-SCD 80-90

Definition

To deny the adversary critical information necessary to accurately estimate the military situation. This task includes analyzing friendly force actions to identify critical information, observable and predictable actions exploitable by adversary intelligence, conducting risk management, and selecting measures that mitigate vulnerabilities. This task includes consideration of friendly signatures in terms of the enemy (includes terrorist) commander's perspective. The co-ordination required between Force Protection (FP), Operational Security (OPSEC), Information Operations (INFO OPS), Information Security (INFOSEC), and the Security element is critical to a successful defensive INFO OPS. Synchronizing these staff elements and requesting assistance from external organisations for specific capabilities will ensure a coherent and integrated defensive INFO OPS posture that enables the command to conduct operations with the knowledge that its own information cycle is protected. The OPSEC Officer will identify whether any essential elements of friendly information or sensitive information has been divulged or if unauthorized parties have knowledge of this information. J6 identifies Communications and Information systems (CIS) vulnerabilities and develops procedures and capabilities to protect friendly Battle Management Consultation, Command, Control, and CIS. J6 develops (INFOSEC Plans and supports Mil INFO OPS development of Operational Security (OPSEC) plans. Further J6 assesses impacts of others' offensive INFO OPS on own systems and co-ordinates specialist support relating to protection of own CIS. OPSEC, deception and the corresponding development of essential elements of friendly information and friendly forces information requirements are key to synchronising the INFO OPS plans and activities. OPSEC falls under the responsibilities of an OPSEC officer, who is a member of the Information Operations Co-ordination Board (IOCB). Mil INFO OPS staff should incorporate OPSEC procedures and be aware that the utilization of local communications infrastructure carries additional risk such as the potential for wire-tapping, hacking/cracking of computer networks, and denial-of-service attacks as well as traditional eavesdropping or Signals Intelligence (SIGINT). The vulnerabilities resulting from using civil contractors to design military networks and the increasing reliance of the military on Commercial off the shelf (COTS) products and information gathered from open sources in an uncontrolled civil environment provide further opportunities for CNO in support of military objectives.

Supporting MC 422/3
Documentation AJP 3.10 (Study draft as at 30 OCT 03)

ST 7.3.7.2 Employ Theatre Electronic Security
Definition To protect all forms of strategic theatre non-
communications electromagnetic radiation's (e.g. radar)
from interception and study by unauthorized persons
seeking information of value.

Supporting
Documentation AJP 3.0

ST 7.3.7.3 Supervise Communications Security (COMSEC)
Definition To supervise the protection resulting from all measures
designed to deny unauthorized persons information of
value that might be derived from the possession and study
of telecommunications. COMSEC includes crypto security,
transmission security, emission security, and physical
security of communications security materials and
information.

Supporting
Documentation AJP 3.0

ST 7.3.7.4 Employ Theatre Computer Security (COMPUSEC)
Definition To employ the theatre wide application of hardware,
firmware and software security features to a computer
system in order to protect against, or prevent, the
unauthorised disclosure, manipulation, modification or
deletion of information or denial of service.

Supporting
Documentation AJP 3.0

ST 7.3.7.5 Coordinate Concealment of Theatre Forces/Facilities
Definition To coordinate protection of theatre strategic forces and
facilities from enemy observation and surveillance sensors.

Supporting
Documentation AJP 3.0

ST 7.3.7.6 Protect Theatre Information Systems (INFOSYS)

Bi-SCD 80-90

Definition	To coordinate theatre-wide activities to protect and defend information and information systems. This task includes integrating and synchronizing indigenous and joint force capabilities for defensive IO, ranging from technical security measures (such as Information Security, INFOSEC) to procedural measures (such as counterintelligence, physical security, and hardening of communications nodes). Information assurance includes producing the theatre policies and procedures designed to ensure availability, integrity, authenticity, confidentiality, and non-repudiation of information. Information system defence includes defensive measures, detection and reporting of attacks or intrusions, and the initiation of restoral and response processes. The co-ordination required between Force Protection (FP), Operational Security (OPSEC), Information Operations (INFO OPS), INFOSEC, and the Security element is critical to a successful defensive INFO OPS. Synchronizing these staff elements and requesting assistance from external organisations for specific capabilities will ensure a coherent and integrated defensive INFO OPS posture that enables the command to conduct operations with the knowledge that its own information cycle is protected. NFOSYS and networks. Modern military and non-military operations and activities rely heavily on INFOSYS to process, store, display, exchange and control information. These networks can be both sources of information and targets for exploitation, but they need to be understood in all their complexity including the humans that use them, and the systems they use. In order to protect our own INFOSYS, the same principle of the Intelligence Preparation of the Battlespace (IPB) process applies. In addition to various staff inputs to understand friendly decision-making process, information systems, key decision makers, INFO OPS requires INTEL support.
Supporting Documentation	MC 422/3 AJP 3.10
ST 7.3.8	Misinform Adversary Regarding Conduct of Theatre Strategy, Campaigns, and Joint Operations

Bi-SCD 80-90

Definition To develop and disseminate the deception plan, which includes the target and story. This task includes the actual execution of the deception plan at the theatre level. The deception plan is focused on enemy expectations, preconceptions, and fears concerning friendly intent, in order to deceive the enemy commander of the true friendly intentions regarding the theatre strategy and campaigns and joint operations. Deception plans will use the entire joint and multinational theatre forces and means, as appropriate, for deceiving the enemy.

Supporting Documentation AJP 3.0

ST 7.3.9 Definition Coordinate Defensive Countermeasure Operations
To coordinate defensive countermeasure operations to be included in the Force Protection Plan. These operations are designed to deny or limit an enemy's ability to use intelligence collection sensors to detect defended assets and/or attack them with precision engagement. Task includes using defensive countermeasures against threat intelligence collection sensors and threat precision engagement weapon systems and employing Electro-Optical/ Infrared, RF, MMW, GPS and Acoustic technologies, resulting in target signature alteration, decoys/deception, target obscuration and sensor/ signal processing jamming/disruption.

Supporting Documentation AJP 3.0

ST 7.3.9.1 Definition Protect and exploit Theatre Decision-Making apparatus/systems
To protect and exploit Theatre Decision-Making apparatus/systems by using primarily INFOSEC, COMSEC, and COMPUSEC means

Supporting Documentation AJP 3.0

ST 7.3.9.2 Develop Defensive Countermeasure Guidance Against Threat Intelligence Collection Sensor Capabilities

Bi-SCD 80-90

Definition	To coordinate defensive countermeasures for inclusion in the Force Protection Plan: This task includes: identifying threat intelligence collection sensors as part of the intelligence preparation of the battlespace; identifying countermeasure capability needed to avoid detection of defended assets from threat intelligence collection sensors; developing appropriate defensive countermeasures input relating to threat collection sensors for Commander's Guidance; and insuring intelligence collection sensors, as appropriate, are included on theatre targeting list.
Supporting Documentation	AJP 3.0
ST 7.3.9.3	Develop Defensive Countermeasure Guidance Against Threat Precision Engagement Capabilities.
Definition	To coordinate defensive countermeasures for inclusion in the Force Protection Plan. This task includes: identifying threat precision guided weapons, associated delivery platforms and target acquisition systems in the intelligence preparation of the battlespace; determining defended assets accessible by threat precision engagement capabilities; identifying countermeasure capability degrade/neutralize threat precision engagement of defended assets; and developing appropriate defensive countermeasure input relating threat and precision engagement of defended assets for Commander's Guidance.
Supporting Documentation	AJP 3.0

Bi-SCD 80-90

OPERATIONAL TASKS (OT)

OT 7.0.0 Definition	Conduct Risk Assessment FP is based upon risk management; that of minimizing risk, not eliminating it. Casualties are an implied reality in military operations, as are materiel losses. An unrealistic desire to avoid casualties may impact adversely on the accomplishment of the mission and, when casualties ensue, undermine political and military resolve.
------------------------	---

Supporting Documentation	AD 80-25
-----------------------------	----------

OT 7.1.0 Definition	Provide Force Protection To safeguard friendly centres of gravity and operational force potential by reducing or avoiding the effects of adversary's operational level and unintentional friendly, actions (includes movement and electronic warfare). In military operations other than war, this activity includes protection of governmental and civil infrastructure and populace of the country being supported; this includes antiterrorism. This task also includes supporting evacuation of non-combatants (NEO) from areas of responsibility.
------------------------	---

Supporting Documentation	AJP 3.0
-----------------------------	---------

OT 7.1.1 Definition	Minimize Significant Defences To provide construction hardening for operational forces and key facilities to include C2, logistic rear area, assembly, and fighting positions. To eliminate hazards that adversely affects execution of the operational level joint force commander's plan.
------------------------	--

Supporting Documentation	AJP 3.0
-----------------------------	---------

OT 7.1.2 Definition	Establish CBRN Protection in Theatre of Operations To ensure the detection of CBRN hazards, the warning of friendly units, the reporting and prediction of CBRN hazards and the protection against CBRN threats in the operational area.
------------------------	---

Supporting Documentation	AJP 3.8
-----------------------------	---------

OT 7.1.3	Coordinate Combat Search and Rescue (CSAR) Support. A-7-15
----------	---

Bi-SCD 80-90

Definition To coordinate operations in support of CSAR, including special operations support to unconventional assisted recovery operations. This task is to provide support for the recovery and repatriation of Alliance personnel isolated from friendly forces or held captive. This task includes coordinating the locating; tracking and reporting isolated or captured personnel covered by AO 2.2.2, Collect Information on Operational Targets. CSAR is normally a national responsibility, and often the responsibility of the air force or air component command.

Supporting Documentation AJP 3.0

OT 7.1.4 Definition Coordinate Submarine Emergency Rescue (SMER) To coordinate the actions necessary for conducting the recovery of escapees and the rescue of personnel from a distressed (formerly known as disabled) submarine (DISSUB). (ATP 57(A) definition).

Supporting Documentation STANAG 1390/ ATP 57(A)

OT 7.1.5 Definition Counter CBRN Weapons in JOA To plan joint force operations, or to operate in an area where an adversary has the capability of employing CBRN weapons or to release toxic industrial materials that produce effects similar to a CBRN weapon. The joint force plans, trains and prepares to conduct mission operations while preventing the adversary from employing CBRN weapons. If prevention fails, the force uses networked detection systems to locate the hazard, take necessary protective actions, and decontaminate as necessary. Activities such as post-hostility remediation, preparing equipment for redeployment and final disposal in situ or removal of an adversary's residual CBRN weapon capability are also included.

Supporting Documentation AJP 3.8

OT 7.1.5.1 Coordinate Counterforce Operations in the JOA

Bi-SCD 80-90

Definition	To positively identify and select CBRN weapon targets such as production, infrastructure, and delivery systems. Match the means (lethal or non-lethal), conduct the attack, and assess damages to include any consequences from collateral damage, transport and dispose of any captured CBRN weapons and facilities. Include PSYOPS in support of deterrence efforts.
Supporting Documentation	AJP 3.8

OT 7.1.5.2 Definition	Coordinate Active CBRN Defence in JOA To protect forces and means in the JOA from attack. Includes Special Operations Forces (SOF) aircraft, interceptor missiles, air defence artillery, non-air defence weapons in an air defence role, electronic attack. Protects critical nodes and facilities particularly in rear areas. This is a joint and multi-national task involving the coordination and synchronization of all available assets in the JOA. Integrates with passive defence procedures for optimising force protection measures. Provides connectivity through C2 systems that provide tactical warning and assessments. Active defences are measures taken to detect, divert or destroy enemy CBRN weapons and delivery means while enroute to their targets. This reduces the benefits an adversary would expect to gain by use of CBRN weapons. Active defence also includes those actions taken to counter and defeat covert and clandestine delivery of CBRN weapons by terrorist and other groups.
Supporting Documentation	AJP 3.8

OT 7.1.5.3	Coordinate Passive CBRN Defence in JOA
------------	--

Bi-SCD 80-90

Definition	To ensure protection against CBRN threats in the JOA through medical surveillance networked detectors, warning and reporting systems, protection, and decontamination. Includes all source intelligence assessments of enemy intent, placement of standoff and point detectors, assessment of attack indicators (to include epidemiological methods for biological attack), use of individual and collective protection, and conducting restoration operations, to include decontamination as necessary. Prepare estimate of the CBRN situation for commanders to include food, water, vector, TIM vulnerability assessments. Note: As part of the CBRN weapons detection, identification and analytic reporting process recognition of agents and diagnoses of casualties will be conducted. This will include but is not limited to medical sector marking and issuing BW/CW countermeasures. If required, actions will be taken to protect medical personnel and material and provide casualty care management to include triage, treatment, accounting, reporting, monitoring, and movement.
Supporting Documentation	STANAG 2037 STANAG 2047 STANAG 2112 STANAG 2229 STANAG 2352 STANAG 2429 STANAG 2461/AmedP-6 (C), Vol I STANAG 2462/ AmedP-6 (C), Vol II STANAG 2463/ AmedP-6 (C), Vol III STANAG 2478 STANAG 2516 STANAG 2941 AJP 3.8 ATP 45 (B)

OT 7.1.5.4 Coordinate Consequence Management (CM) in JOA

Bi-SCD 80-90

Definition To coordinate support for interagency essential services and activities required to manage and mitigate damage resulting from the employment of CBRN weapons or release of toxic industrial materials and/or contaminants or natural borne disasters. Services and activities can include population evacuation, decontamination, transportation, communications, public works and engineering, fire fighting, information and planning, mass casualty (MASCAL) care, resource support, health and medical services, urban SAR, hazardous materials, food and energy. CM may occur during military operations, be required in support of friends and allies, or occur within NATO Territory.

Supporting Documentation AJP 3.0

OT 7.1.5.5 Integrate JOA Intelligence, Surveillance, and Reconnaissance (ISR) with CBRN Situation

Definition To integrate the CBRN weapons situation into C4ISR systems in the JOA. Includes the processing of information from strategic, operational, and tactical sources on CBRN weapon delivery systems, enemy intent and possible courses of action. Also includes the characterization of any toxic industrial materials within the JOA, tracking the operational situation for CBRN weapon hazards, directing counterforce responses, alerting active defences, activating CBRN defence procedures, and/or initiating consequence management activities. Exploits captured technical data on CBRN weapons and assesses enemy capabilities, intent, and probable courses of action. Recommends friendly actions. Provides the links between proactive and passive defences. This task also includes medical surveillance.

Supporting Documentation AJP 3.0

OT 7.2.0 Provide Security

Definition To enhance freedom of action by identifying and reducing friendly vulnerability to hostile acts, influence, or surprise. This includes measures to protect from surprise, observation, detection, interference, espionage, terrorism, and sabotage. This task includes actions for protecting and securing the flanks and rear area of operational formations, and protecting and securing critical installations, facilities, systems and air, land, and sea LOCs.

Supporting AJP 3.0

A-7-19

Bi-SCD 80-90

Documentation

OT 7.2.1	Provide Counter-reconnaissance in JOA
Definition	To provide counter-reconnaissance that will prevent hostile observation of operational forces and operational area.
Supporting Documentation	AJP 3.0

OT 7.2.3	Protect/Secure Operationally Critical Installations, Facilities, and Systems
Definition	To protect operationally critical installations, facilities, and systems from attack in the operational area. Task includes performing a force protection site survey for bed down of assets and personnel prior to arrival of forces. Survey will provide a threat assessment and, based on that assessment, recommend sites for housing, supplies, ammunition and ordnance, aircraft parking, operations, maintenance, etc.
Supporting Documentation	AJP 3.0

OT 7.2.4	Avoid Operational Patterns
Definition	To employ techniques that protects operational forces and facilities from adversary's observation and surveillance. To vary activities and ways of conducting operations to avoid predictable patterns.
Supporting Documentation	AJP 3.0

OT 7.2.5	Assess the Effectiveness of Operations Security in Theatre of Operations
Definition	To determine the extent to which the operational security (OPSEC) measures reduced or eliminated the vulnerabilities of friendly actions to adversary exploitation.
Supporting Documentation	AJP 3.0

OT 7.2.6	Plan and coordinate Force Protection for Operational Forces and means
----------	---

Bi-SCD 80-90

Definition To plan and coordinate Force Protection for operational forces and means to enhance freedom of action by identifying and reducing friendly vulnerability to hostile acts, influence, or surprise. This task includes antiterrorism measures and counterintelligence actions designed to protect friendly forces from surprise, observation, detection, interference, terrorism, espionage, sabotage, intelligence collection, and assassination. This task also includes actions for protecting and securing the flanks and rear areas of operational formations, critical installations, facilities, systems and air, land, and sea LOCs.

Supporting Documentation AJP 3.0

OT 7.2.7 Establish Evacuation Policy Procedures for Area of Operations

Definition To establish policy and procedures for the evacuation of personnel, casualties, equipment, and non-combatants from the operational area.

Supporting Documentation AJP 3.0

OT 7.3.0 Definition Provide Operational Survivability and Force Protection To conserve the force's fighting potential so that it can be applied at the decisive time and place. This activity includes actions taken to counter the enemy's forces by making friendly forces (including operational formations, personnel, etc.), systems, and operational facilities difficult to locate, strike, and destroy. This task includes protecting joint and multinational air, space, land, sea, and special operations forces; bases; A/SPODs and essential personnel; and LOCs from enemy operational manoeuvre and concentrated enemy air, space, ground, and sea attack; chemical and biological warfare; and terrorist attack. This task also pertains to protection of operational level forces, systems, and civil infrastructure of friendly nations and groups in military operations other than war.

Supporting Documentation AD 80-25

OT 7.3.1 Reduce force susceptibility to detection

Bi-SCD 80-90

Definition To reduce force susceptibility by implementing the measures in order to prevent any type of discovery by any means of the presence of a person, object or phenomenon of potential military significance.

Supporting Documentation AAP 6

OT 7.3.1.1
Definition Provide Airspace Control
To establish procedures in order to minimise fratricide and provide AD forces with the appropriate means to maximise the effectiveness of military operations.

Supporting Documentation AJP 3.0

OT 7.3.1.2
Definition Integrate Joint/Multinational Operational Aerospace Defence
To integrate Joint and multi-national assets into a congruent system that allows the Operational Commander to establish and maintain air battle-space situational awareness and the ability to direct his air assets.

Supporting Documentation

OT 7.3.1.3
Definition Coordinate Concealment of Forces/Facilities.
To coordinate camouflage and concealment to deny enemy observation and surveillance of forces and facilities.

Supporting Documentation AJP 3.12
STANAG 2394/ATP 52 (A)

OT 7.3.1.4
Definition Provide Engineering Support for camouflage, concealment and non-electronic deception.
To provide support to cover special camouflage, concealment and non-electronic deception measures requirements, especially those for large-scale requirements, which go beyond the general responsibility of all units and that requires the employment of engineer equipment and devices.

Supporting Documentation AJP 3.12
STANAG 2394/ATP 52 (A)

OT 7.3.2
Reduce force vulnerability to the effects of enemy/adversary attacks.

A-7-22

Bi-SCD 80-90

Definition This includes but is not limited to protection of personnel against CBRM agents.

Supporting Documentation AMedP series of documents.

OT 7.3.2.1 Counter Enemy Air Attack (Defensive Counter Air (DCA)) in the JOA

Definition To conduct operations to defeat the enemy's offensive plan and inflict unacceptable losses on attacking enemy forces. DCA consists of active and passive operations to defend friendly airspace and protect friendly forces, material, and infrastructure from enemy air and missile attack. It includes detection, identification, and destruction of attacking enemy air and missiles. It is normally conducted near or over friendly territory and generally is a reaction to the initiative of the enemy air forces.

Supporting Documentation AJP 3.0

OT 7.3.2.2 Provide Engineering Support to harden vulnerabilities.
Definition To provide engineer support to cover the survivability requirements which go beyond the general responsibility of all units. In general, that should cover:

- assistance in the preparation and construction of field fortifications
- hardening and construction of protective works, including collective protection against CBRN attack
- assistance with camouflage , concealment and non-electronic deception
- assistance in the clearance of fields of fire
- advice on the selection of buildings and other elements of the infrastructure for defence and protection

Supporting Documentation AJP 3.12
STANAG 2394/ATP 52 (A)

OT 7.3.2.3 Coordinate Engineer Support to C-IED Operations
Definition To be developed.

Supporting Documentation AJP 3.0

OT 7.3.3 Develop a FP Directive/SOP/Plan to coordinate protection for HQs and Forces.

A-7-23

Bi-SCD 80-90

Definition To comprise all measures taken and means used to minimize the vulnerability of personnel, facilities, equipment and operations to any threat and in all situations, so as to preserve the freedom of action and operational effectiveness of a force is to be formed up within an Force Protection Directive and each HQ or command are to develop its plans and SOP in order to ease the coordination for the protection measures for HQs and Forces.

Supporting Documentation AD 80-25

OT 7.3.3.1 Definition Employ Positive Control Measures
To establish direct controls that minimizes mutual interference between operational air defence and other operations.

Supporting Documentation AJP 3.0

OT 7.3.3.2 Definition Employ Procedural Control Measures
To establish procedures which will allow aircraft (to include helicopters) to be readily identified based on their routing, altitude, blind radio calls, or other actions, in the event positive control measures fail.

Supporting Documentation AJP 3.0

OT 7.3.4 Definition Provide for Protective Security.
HQs and assigned units are to provide the necessary Protective Security in accordance with CM(2002)49 and CM(2002)50.

Supporting Documentation AD 80-25

OT 7.3.4.1 Provide Protection for Operational Forces, Means, and Non-combatants

Bi-SCD 80-90

Definition To safeguard friendly centres of gravity and operational force potential by reducing or avoiding the effects of enemy operational level (tactical risks) actions. In military operations other than war, this activity includes protection of governmental and civil infrastructure and populace of the country being supported; this includes antiterrorism. This task includes supporting Department of State evacuation of non-combatants from areas of responsibility.

Supporting Documentation AJP 3.0

OT 7.3.4.2 Definition Protect Use of Electromagnetic Spectrum in the JOA To ensure friendly force use of the electromagnetic spectrum despite the enemy's use of electronic warfare. This is a division of electronic warfare called Electronic Protection Measures (EPM) and includes deconflicting friendly use of the electromagnetic spectrum.

Supporting Documentation MC 64/9
AJP 3.6
ATP 44C
ATP 51A

OT 7.3.4.3 Definition Protect Use of the Acoustic Spectrum in the JOA To ensure friendly effective use of the acoustic spectrum by establishing procedures that prevents mutual interference between friendly units and counters the enemy's use of acoustic warfare.

Supporting Documentation AJP 3.6

OT 7.3.4.4 Definition Conduct Evacuation of Non-combatants from the JOA To use JOA military and host-nation resources for the evacuation of Allied military dependents, NATO civilian employees, and private citizens (Allied, Partner and third-country nationals). Organizations at various echelons provide support (medical, transportation, religious, and security) to the non-combatants; the support provided is analyzed under the appropriate activity. This task includes protection of non-combatant evacuees prior to departure from the joint operations area.

Supporting Documentation AJP 3.0

Bi-SCD 80-90

OT 7.3.4.5 Definition	Establish Disaster Control Measures To take measures before, during, or after hostile action or natural disasters to reduce probability of damage, minimize its effects, and initiate recovery.
Supporting Documentation	AMedP series of documents.
OT 7.3.4.6 Definition	Plan and Coordinate CBRN Defence in the JOA All measures (plans and activities) intended to mitigate or neutralize adverse effects on operations resulting from the use or threatened use of chemical, biological, radiological or nuclear weapons and devices; the emergence of secondary hazards arising from counter-force targeting; or the release, or risk of release, of toxic industrial materials into the environment. It encompasses the planning, coordination and sustainment of personnel and equipment to support campaigns and major operations in a CBRN threat environment in the JOA.
Supporting Documentation	STANAG 2083 STANAG 2104 STANAG 2133 STANAG 2150 STANAG 2352 STANAG 2353 STANAG 2426 STANAG 2473 STANAG 2909 STANAG 2984 STANAG 2229 STANAG 2516 AAP 21 (A) AJP 3.8 ATP 45
OT 7.3.4.7 Definition	Integrate Host-Nation Security Forces and Means To integrate and synchronize host-nation police, fire departments, military internal security forces, communications infrastructure, constabulary, rescue agencies, and penal institutions into the security plan for the operational area. This task includes the planning and execution of operational tasks that involve operations of two or more nations' forces including the forces of the HN.
Supporting Documentation	

Bi-SCD 80-90

OT 7.3.5 Definition	Provide for Active Defence HQs and assigned units are to provide effective physical defence against covert and overt intrusion into their TAOR, and within designated Vital Areas and Key Points for which they are responsible. Active Defence may demand aggressive actions to counter the threat of attack, using appropriate ground, marine or airborne combat forces, firepower and resources to deter the aggressor, defeat his attack, and, where possible, neutralise his means to pose any further threat. For most units, including maritime, this will involve the active domination of the TAOR and the crucial need to deny an aggressor suitable fire/operating bases. Active Defence will invariably require a dedicated minute-to-minute C2 capability for the control of assigned FP forces and close co-ordination with HN territorial command elements will be essential to reduce the risk of fratricide.
Supporting Documentation	AD 80-25
OT 7.3.5.1 Definition	Provide Positive Identification of Friendly Forces within the JOA To determine discretely and positively, by any means the individual identity of forces, objects (military formations), or phenomena (such as communications electronic patterns). The objective of this task is to protect friendly and neutral forces, objects, or phenomena from attack by operational level forces or systems. This task facilitates the concentration of effort against the adversary.
Supporting Documentation	AJP 3.0
OT 7.3.5.2 Definition	Provide Counter-Psychological Operations Conduct activities to identify adversary psychological warfare operations contributing to situational awareness and serve to expose adversary attempts to influence friendly populations and military forces. Use organizations and activities (intelligence, surveillance, reconnaissance, etc.) to identify adversary psychological warfare operations. Counter these operations using public affairs, civil affairs, or internal information dissemination means to convey accurate information to friendly forces.
Supporting Documentation	AJP 3.0

A-7-27

Bi-SCD 80-90

OT 7.3.5.3 Definition	Employ Operations Security (OPSEC) in the JOA. To employ operations security (OPSEC) measures to deny critical information necessary by an adversary commander to accurately estimate the military situation. To employ the five actions of OPSEC during planning and conducting campaigns and major operations to protect friendly forces and system capabilities from exploitation by an adversary. This task includes determining essential elements of friendly information (EEFI), identifying critical information from the EEFIs, conducting vulnerability analysis, selecting and implementing appropriate OPSEC measures, and finally monitoring OPSEC actions and comparing the results with desired results.
Supporting Documentation	AJP 3.10 (Study draft as at 30 OCT 03)
OT 7.3.5.4 Definition	Support Survival, Evasion, Resistance and Escape (SERE) in Theatre Support isolated Allied personnel during all phases of isolating event as required (evasion, recovery, repatriation, or captivity), to include captivity, governmental detention and hostage situations in peacetime, war, and operations other than war, and all Allied personnel with potential for an isolating event. This task includes setting theatre standards for SERE training for all personnel, inclusive of but not limited to high risk of capture personnel, and supporting isolated personnel who are effecting their own recovery
Supporting Documentation	AJP 3.0
OT 7.3.5.5	Supervise Communications Security (COMSEC)

Bi-SCD 80-90

Definition To supervise the protection resulting from all measures designed to deny unauthorized persons information of value that might be derived from the possession and study of telecommunications, or to mislead unauthorized persons in their interpretation of the results of such possession and study. COMSEC includes: crypto security, transmission security, emission security, and physical security of communications security materials and information. This task includes COMSEC monitoring (collection, analysis, and reporting) of NATO telecommunications and automated information systems and monitoring of related non-communication signals. Vulnerabilities that are exploitable by potential adversaries will be identified and recommendations concerning countermeasures and corrective action will be submitted to the commander.

Supporting Documentation AJP 3.0

OT 7.3.5.6 Definition Conduct Defensive Countermeasure Operations
To conduct defensive countermeasure operations as part of the Force Protection Plan. These operations are designed to deny or limit an enemy's ability to use intelligence collection sensors to detect defended assets and/or attack them with precision engagement.

Supporting Documentation AJP 3.0

OT 7.3.5.7 Definition Conduct Defensive Countermeasure Operations Against Threat Intelligence Sensors
To conduct defensive countermeasures, which includes: reviewing defended asset list and identify those assets that could be effectively protected with countermeasures from detection by threat intelligence sensors; selecting appropriate countermeasures to degrade/neutralize threat sensor capabilities to detect defended assets; developing defended asset countermeasure input to Force Protection Plan; and assessing countermeasure effectiveness and adjust input to Force Protection Plan as necessary.

Supporting Documentation AJP 3.0

OT 7.3.5.8 Conduct Defensive Countermeasure Operations Against Threat Precision Engagement

Bi-SCD 80-90

Definition To conduct defensive countermeasures, which includes: reviewing defended asset list and identify those assets that could be effectively protected from precision engagement by countermeasures; selecting appropriate countermeasures to degrade/neutralize threat precision guided weapon and associated target acquisition systems from successfully attacking defended assets; developing defended asset countermeasure input to Force Protection Plan and assessing countermeasure effectiveness; and adjusting input to Force Protection Plan as necessary.

Supporting Documentation AJP 3.0

OT 7.3.5.9 Definition Plan aspects of a Military Information Campaign (MIC) Military Information Operations (Mil INFO OPS) are integral parts of military planning at every level of command. It is therefore critical that Mil INFO OPS planners are engaged in the Operational Planning Process (OPP) from the beginning, however this planning takes place. Mil INFO OPS planning must directly support and be central to the Commander's intent, guidance and desired end state. INFO OPS staff will be core members of relevant staff planning sub groups, including the JOPG and provide inputs to planning for the Joint Targeting Process (JTP), via the Joint Targeting Working Group (JTWG) or Component Command Targeting Working Group (CC TWG).

Supporting Documentation AJP 3.10 (Study draft as at 30 OCT 03)

OT 7.3.6 Definition Provide for Passive Defence HQs and assigned units are to protect their forces from the physical effects of attack. Protective Security will provide baseline defence and protection and serve to deter criminal acts, espionage, sabotage and lower-level acts of terrorism. However, as the situation moves through crisis to conflict, Passive Defence may demand individual and collective protection from conventional weapons (e.g. small-arms, bombs, explosives, shrapnel, rockets, missiles and mines etc) and from CBRN hazards. Camouflage, Concealment and Deception (CCD) and Operational Security (OPSEC) measures can contribute significantly towards effective FP by denying an aggressor the means to target NATO forces. Similarly, the dispersal of key assets should enhance their survivability.

OT 7.3.6.9	Provide Engineering Support to Operational Force Protection Measures
Definition	To provide engineer support to cover the force protection requirements which go beyond the general responsibility of all units.
Supporting Documentation	AJP 3.12 STANAG 2394/ATP 52 (A)
OT 7.3.6.10	Counter aspects of a Military Information Campaign (MIC)

Bi-SCD 80-90

Definition

Mil INFO Campaigns (MIC) will be developed, planned and implemented by the JFC. The MIC is focused on shaping the information domain, through targeting the decision makers, their systems and processes. The MIC should protect friendly forces against information attacks and target the adversary. Guided by an approved Military Information Strategy (MIS), the operational level will produce the MIC. The MIC will be reflected in the Commander's planning guidance for the conduct of military activities in theatre to include Mil INFO OPS objectives focused on the Commander's Intent and desired Military End State. An Operational Commanders MIC made up from objectives, plans and activities to achieve the informational and psychological effects desired against adversary decision-making and information processes, while protecting one's own includes any plans designed specifically to address the targets of Mil INFO OPS. The operational Military Information Operations plan (MIOP) should be outlined as an overall campaign within the Commander's Campaign. Through standard analysis of the MIS and INFO Strategy, operational planners will determine the objectives, targets and effects of the MIC. The MIC must also include a synchronised internal campaign to exploit own information and protect own decision-making. Both the external and internal aspects of the MIC are designed to ensure coherency of message and activity throughout INFO Domain targeted activity. So the MIC will address informational issues across the JOA to ensure co-ordinated, synchronised psychological and informational plans and targeted activities. Lack of coherency will result in an incomplete Campaign with possible negative results for the Commander's campaign. In order to achieve a co-ordinated MIC, all staff areas with operations in the INFO Domain must co-ordinate at Section Chief's level under the Commander's direct or delegated guidance. Computer Network Attack (CNA) is the incursion into a computer, computer system or network, via the software or hardware, in order to: disrupt, deny, degrade, or destroy information resident in computers and networks, or the computers and the networks themselves. Attack includes physical damage to components induced by manipulation or modification of the software. CNA when integrated into a co-ordinated MIC can add a powerful military tool to the options of the Commander. The use of this weapon requires a clear understanding of the forces and capabilities needed as well as the desired effects and legal limitations. Control of and capability for CNA currently

A-7-34

Bi-SCD 80-90

rests with national authorities and for the NATO Operational Commander, targeting requests must be sent via strategic channels for implementation and approval nationally.

Contribute to Air Surveillance and Defend against Air Attack (*) G 5.1.

Definition

Formations, units or elements will contribute each in their own way, to threat assessment, early warning, surveillance and the recognized Air Picture (RAP). A thorough knowledge of NATO air defence doctrine will be required by commanders and staff who are tasked as local anti-air warfare coordinators in a joint air defence command. In a maritime environment tactics and procedures for anti-ship missile defence and defensive anti-aircraft fire (with missiles or guns) must be well understood and practiced by all members of the air defence team. All units must be able to provide local air defence within the confines of orders and instructions covering air rules of engagement. Common requirements related to this task include familiarization with NATO voice procedure for air defence operations, various reports and returns related to the specific aspect of the task, air safety procedures and rules of engagement.

AJP 3.0

TT 7.4.6
Definition

Provide for Combat Identification
Combat identification (CID) is the process of attaining an accurate characterization of unknown detected objects to the extent that high confidence and timely application of military options and weapon resources can occur. Depending on the situation and the operational decisions that must be made, this characterization may be limited to, "friend," "enemy," or "neutral." In other situations, other characterizations may be required including, but not limited to class, type, nationality and mission configuration. CID characterizations, when applied with combatant commander's Rules of Engagement (ROE), enable engagement decisions and the subsequent use, or prohibition of use, of lethal and non-lethal weaponry to accomplish military objectives. CID is used for force posturing, command and control, situational awareness as well as shoot, no-shoot employment decisions. Note: CID of enemy and neutral objects is heavily dependent on successful detection, which is often very difficult, near real-time fusion/correlation of data from multiple sensors, and a number of other critical ISR capabilities. The end goal (i.e., correct identification of objects) depends considerably on the success of the detection function. Further, the ability to identify and characterize enemy and neutral objects, even if detected, depends extensively on successful collection and analysis of target signatures, etc. Warfighters must be at least 95% certain that an object or entity has been correctly characterized since any greater than 5% uncertainty creates an unacceptable level of risk of fratricide or enemy penetration."

DEVELOPING COMMANDER'S MISSION ESSENTIAL TASKS

1. **Mission Essential Task (MET).** A task the commander designates as essential to mission accomplishment and defined using the common language of the NTL.
2. **Development of the Commander's METs.**
 - a. Through careful analysis of assigned and/or potential missions, SACEUR's strategic priorities and his own Terms of Reference as well as his determination of exactly where emphasis should be placed on training his HQs and forces, the Commander may establish a set of mission-based required capabilities drawn from the NTL. Once expressed in terms of essential tasks, conditions and standards, preferably in order of relative importance to mission accomplishment, this set should serve as the basis for the commander to sort out which capabilities fit best to accomplish the mission. Commanders are not confined to NTL tasks in the final assessment of mission essential tasks and capabilities when good sound military common sense works to serve the interest of the mission success.
 - b. The METs identifies the Commander's mission requirements and, together with the requisite supporting tasks, forms the basis for determining the training requirements for the mission. It facilitates the set up of logical, sequential training programmes as well as providing a basis for direction and guidance to subordinate HQs.
 - c. Commanders' training assessment of their staffs' ability to perform those mission essential tasks will determine the HQ's training objectives, which are to be defined to reflect what skills, knowledge, and abilities are required for successful job performance. This assessment should compare the actual level of proficiency against the required standards defined for the METs, and should determine the training requirements necessary to achieve and sustain desired levels of proficiency for each MET.
 - d. Once developed, the respective METs are to be reviewed periodically based on Strategic Guidance, Lessons Learned (LL), and the Commander's operational and training assessments taking into account the commands' current and projected mission and tasks.
3. **Development of Training Objectives.**
 - a. Training objectives provide details to select the best training method and properly design training events. The selection of the most appropriate training method is the key element of the entire requirements-based training system. Academics and exercises are the two fundamental training methods. Each of these major methods can be further divided into ways (modes) and specific tools (media). The appropriate training method/mode/media should be selected based on the level of proficiency of the training audience, desired outcome and resources available.
 - b. The Commander's training objectives should describe the desired

Bi-SCD 80-90

outcome of a training activity for a training audience as well as the measures for evaluating the performance outcome. Training objectives consist of a specific performance requirement (task), the training situation (conditions) and the level of performance (standard). In some cases, several incremental training objectives may be required to attain a performance standard.

c. Training objectives form the basis from which training events are designed, developed, executed and evaluated. No training should be programmed, planned or conducted without clear definition of training objectives to be achieved. The Bi-SC Exercise Directive lays down the process of approving training objectives for a NATO military exercise.

4. Other Task Related Terms.

a. **Supporting Task.** A specific activity that contributes to accomplishing a joint mission-essential task. Supporting tasks are accomplished by the command staff or subordinate commands. See also joint mission-essential task.

b. **Conditions.** Conditions are variables of the overall environment and availability of required capabilities versus the risks or threats that affect the performance of tasks either positively or negatively. Conditions may be categorised by inputs from the physical environment (e.g., weather, oceanography, topography); the military environment (e.g., pacts, treaties, troop-contributing nations, HNS, infrastructure, command relationships); and the civil environment (e.g., political, population, institutions, culture, economy). Due to the variable character of conditions under each given situation, there is no standard list of tasks for a sample mission. Thus, the conditions affecting the type, nature and sequence of tasks are situation dependent and need to be assessed by the commanders.

c. **Standard.** The minimum acceptable proficiency required in the performance of a task. This is either an exact value, a physical entity, or an abstract concept, established and defined by authority, custom, or common consent to serve as a reference, model, or rule in measuring quantities or qualities, establishing practices or procedures, or evaluating results.

d. **Measure.** Provides the basis for describing varying levels of task performance.

e. **Criterion.** The minimum acceptable level of performance associated with a particular measure of task performance. Criteria are often expressed as hours, days, percent, occurrences, minutes, miles, or some other command stated measure.

CONDITIONS FOR NATO TASKS

1. The list of conditions contained in this annex are designed to be used as part of the Joint Planning and/or Training Process. This process is initiated by NATO commanders, who examine their assigned missions and other taskings in order to specify their capability requirements. These capability requirements are expressed as Mission Essential Tasks (MET) with associated conditions and standards.
2. While METs are selected from among the tasks provided in the NTL including the commander's own assessment, and are deemed vital to the accomplishment of the commander's missions; conditions are variables of the environment that affect the performance of these tasks. However, not all conditions affect tasks in the same way. Conditions that greatly affect the performance of some tasks may have little or no effect on the performance of other tasks.
3. This annex provides a listing of conditions that may be used to describe the conditions under which tasks will likely be performed as part of the missions.
4. Conditions in this document are organised into three broad categories: Physical, Military, and Civil. Within each category, a number of related conditions are organised. For example, conditions that are organised under the physical environment include land, maritime environment, air, and space. Each condition is defined and described.
 - a. The first section – **Conditions of the Physical Environment** - includes factors arising from nature and the physical environment as modified by man.
 - b. The second section – **Conditions of the Military Environment** – includes factors related to military forces. Conditions in this section can apply to either friendly or enemy forces, as indicated parenthetically after the name of the condition (friendly, enemy).
 - c. Third section – **Conditions of the Civil Environment** – includes factors related to a people, their government, politics, culture, and economy that impact military operations.
5. Each condition contained in this annex is briefly defined and is assigned a unique reference code beginning with the letter "C."
6. In addition, for each condition, several descriptors are provided that would allow a user to specify how the condition is likely to exist in a particular mission or scenario. For example, for the condition Climate, descriptors allow the user to specify whether the climate is Tropical, Temperate, Arctic, or Arid.
7. As in the case for tasks, proposed new conditions are to be sent to the SHAPE for approval and insertion in the NTL.

Bi-SCD 80-90

Conditions of the Physical Environment

This section includes factors arising from nature and the physical environment as modified by man and includes the organisation of physical conditions in the major subcategories of land, sea, air, and space.

C 1.0 PHYSICAL ENVIRONMENT

Includes those factors of the nature and the physical environment as modified by man and includes the organisation of physical conditions in the major subcategories of land, sea, air, and space.

C 1.1 LAND

Physical characteristics, both natural and man-made, of a land area.

DESCRIPTORS:

Highly developed (urban)
Moderately developed (suburban, rural)
Undeveloped (natural state)

C 1.1.1 Terrain

General characteristics of land areas.

DESCRIPTORS:

Mountainous
Piedmont
Steppe (pampas, plains, savanna, veldt)
Delta (river systems, lakes regions)
Desert
Jungle
Arctic

C 1.1.1.1 Terrain Relief

Height of immediate terrain relative to surrounding area, measured from a base point (adjacent valley or plateau).

DESCRIPTORS:

High (> 500 ft)
Moderate (100 to 500 ft)
Low (10 to 100 ft)
Very Low (< 10 ft)

C 1.1.1.2 Terrain Elevation

Height of immediate terrain in reference to sea level.

DESCRIPTORS:

Very high (> 10,000 ft)
High (6,000 to 10,000 ft)
Moderately high (3,000 to 6,000 ft)
Moderately low (1,000 to 3,000 ft)

Bi-SCD 80-90

Low (500 to 1,000 ft)

Very low (< 500 ft)

C 1.1.1.3 Terrain Slope

The average steepness or grade of a land area.

DESCRIPTORS:

Steep (> 10%)

Moderate (3 to 10%)

Little (< 3%)

C 1.1.1.4 Terrain Firmness

The terrain's ability to support weight.

DESCRIPTORS:

Excellent (paved)

Good (hard-packed ground)

Fair (firm surface when dry or frozen)

Poor (spongy soil, soft sand, deep snow)

C 1.1.1.5 Terrain Traction

Ability to maintain sufficient friction with terrain to control movement.

DESCRIPTORS:

Good (wet or dry)

Fair (good when dry)

Poor (sandy, muddy, icy)

C 1.1.1.6 Vegetation

Plants, trees, and shrubs.

DESCRIPTORS:

Jungle (rainforest, canopied)

Dense (forested)

Light (meadow, plain)

Sparse (alpine, semi-desert)

Negligible (arctic, desert)

C 1.1.1.7 Terrain Relief Features

Specific terrain features in immediate area.

DESCRIPTORS:

Large raised (mountain, mesa, butte)

Small raised (hill, knoll)

Small depressed (gap, ravine, gully)

Large depressed (canyon, valley)

C 1.1.1.8 Geological Features

Features relating to the earth's subsurface.

DESCRIPTORS:

Bi-SCD 80-90

Stable
Unstable

C 1.1.2.1 Geological Activity

Seismic or volcanic activity in region.

DESCRIPTORS:

Current (volcanic eruptions, earthquakes)
Recent (aftershocks, minor emissions)
Inactive

C 1.1.2.2 Magnetic Variation

Deviations caused by position relative to the location of the magnetic pole.

DESCRIPTORS:

Significant
Moderate
Slight

C 1.1.2.3 Subsurface Water

Availability of underground water supplies.

DESCRIPTORS:

Accessible (adequate supply and reasonably close to surface)
Somewhat accessible (at moderate depths)
Inaccessible (unavailable or present only at great depth)

C 1.1.2.4 Synthetic Terrain Features

Degree to which civilization and military actions have affected the physical environment.

DESCRIPTORS:

Significant (large-scale civilian or military impact)
Moderate (impact on specific small areas)
Negligible (undeveloped land area)

C 1.1.3 Urban Centres

Presence of built-up population centres.

DESCRIPTORS:

Significant (> 500,000 people)
Moderate (50,000 to 500,000 people)
Minor (< 50,000 people)
Negligible (rural)

C 1.1.3.1 Significant Civil Structures

Synthetic structures that alter terrain (bridges, stadiums, canals), or that could impact terrain, if damaged (locks, dams, tunnels).

DESCRIPTORS:

Numerous (urban)

Bi-SCD 80-90

Some (suburban)
Few or none (rural)

C 1.1.3.2 Obstacles to Movement

The presence of obstacles to movement and manoeuvre; covering land, sea, and air operations (land and sea mines, barrage balloons, constructed obstacles).

DESCRIPTORS:

Extensive (system of obstacles)
Moderate (some use of obstacles)
None

C 1.1.3.3 Route Availability

The availability of navigable routes over land areas.

DESCRIPTORS:

High (multiple paved, all weather roads)
Moderate (Some paved, but limited all weather road surfaces)
Low (Few roads or trails, no all weather routes)

C 1.1.4 Landlocked Waters

Bodies of water surrounded by land to include lakes, reservoirs, and wetlands.

DESCRIPTORS:

Very large (large lakes)
Large to moderate (lakes, reservoirs)
Small (ponds)

C 1.1.4.1 Landlocked Waters Depth

The depth of water at a particular point or area.

DESCRIPTORS:

Deep (> 30 feet)
Moderate (10 to 30 feet)
Shallow (4 to 10 feet)
Very Shallow (< 4 feet)

C 1.1.4.2 Landlocked Waters Current

A steady, generally predictable flow of water.

DESCRIPTORS:

Strong (> 3 knots)
Moderate (1 to 3 knots)
Gentle (< 1 knot)

C 1.1.4.3 Landlocked Waters Width

Width of bodies of water.

DESCRIPTORS:

Very large (> 5 NM)

Bi-SCD 80-90

Large (1 to 5 NM)
Moderate (3000 feet to 1 NM)
Small (500 to 3000 ft)
Narrow (< 500 feet)

C 1.1.4.4 Landlocked Waters Bottom

Characteristics of the land underneath landlocked waters.

DESCRIPTORS:

Flat and Firm
Flat and soft
Moderate slopes
Irregular or Rocky

C 1.1.4.5 Landlocked Waters Shore Gradient

Slope of the land at the edge of the water.

DESCRIPTORS:

Gentle (< 3%)
Moderate (3 to 10%)
Steep (> 10%)

C 1.1.4.6 Landlocked Water Temperature

Water temperature (degrees Fahrenheit).

DESCRIPTORS:

Extremely cold (<35F)
Cold (35F-50F)
Moderate (56F-75F)
Warm (>75F)

C 1.1.4.7 Divers/Swimmers Landlocked Water

Elevation

The height above sea level at which diving operations will be conducted.

DESCRIPTORS:

Norm (<2300 feet)
High altitude (2300 feet and above)

C 1.1.4.8 Divers/Swimmers Landlocked Water Currents

A steady, generally predictable flow of water.

DESCRIPTORS:

Very strong (>1 knot)
Strong (.75-1 knots)
Moderate (.25-.74 knots)
Mild (<.25)

C 1.2 SEA

Bi-SCD 80-90

Those factors associated with the continuous salt-water ocean system to include oceans, seas, gulfs, inlets, bays, sounds, straits, channels, and rivers.

DESCRIPTORS:

Open (open ocean, blue water beyond 5 NM of land)

Littoral (Coastal, (within 5 NM of land areas)

Riverine (inland from the littoral terrain to include rivers, canals, and delta areas connected to landlocked waters)

C 1.2.1 Ocean Waters

Primary bodies of salt water those are not landlocked.

DESCRIPTORS:

Atlantic (North and South)

Pacific (North and South)

Indian

Arctic

C 1.2.1.1 Ocean Depth

The depth of ocean water at a point or for an area.

DESCRIPTORS:

Very shallow (<50 fathoms)

Shallow (50 to 100 fathoms)

Limited (100 to 500 fathoms)

Deep (500 to 2500 fathoms)

Very deep (> 2500 fathoms)

C 1.2.1.2 Ocean Currents

A steady, generally predictable flow, present either in open ocean waters or in littoral coastal ocean waters.

DESCRIPTORS:

Strong (> 3 knots)

Moderate (1 to 3 knots)

Little or no (< 1 knot)

C 1.2.1.3 Sea State

Roughness of seas caused by wind or disturbances.

DESCRIPTORS:

Calm to slight (Beaufort Force < 5, Sea State 3 or less, seas 4 ft or less)

Moderate (Beaufort Force 5, Sea State 4, seas 4-8 ft)

Rough (Beaufort Force 6-7, Sea State 5-6, seas 8-16 ft)

Very Rough (Beaufort Force 8-9, Sea State 6, seas 17-20)

High (Beaufort Force 10, Sea State 7, seas 20-30 ft)

Extremely rough (Beaufort Force above 10, Sea State above 7, seas above 30 ft)

C 1.2.1.4 Ocean Temperature

Water surface temperature (degrees Fahrenheit).

DESCRIPTORS:

Bi-SCD 80-90

Extremely cold (< 35 F)
Cold (35 to 55 F)
Moderate (56 to 75 F)
Warm (> 75 F)

C 1.2.1.5 Saline Content

Level of salt content in water (parts per thousand).

DESCRIPTORS:

Low (< 25 0/00)
Average (25 to 35 0/00)
High (> 35 0/00)

C 1.2.1.6 Ocean Features

Features just above, just below, or within 10 fathoms of the ocean surface to include islands, atolls, reefs, shoals, rocks, or icebergs.

DESCRIPTORS:

Large raised (islands)
Small raised (atolls, reefs)
Small submerged (rocks, icebergs)
Large submerged (shoals, subsurface reefs)

C 1.2.1.7 Sea Room

Availability of space for maritime manoeuvre. Includes dynamic factors such as confining ice, submerged wrecks, or potentially damaging floating objects such as logs. Applies especially to coastal polar, littoral, or riverine environments.

DESCRIPTORS:

Unrestricted (open ocean)
Moderate (some confining factors)
Confined (coastal and riverine waters)

C 1.2.1.8 Ocean Acoustics

Assessed qualities of the tactical subsurface environment, including factors such as sound propagation path, layer depth, and propagation loss (but excluding sea state, ambient noise and other factors covered separately in this section)

DESCRIPTORS:

Good (subsurface detection systems operate effectively in the acoustic environment)
Fair (systems moderately degraded by acoustic conditions)
Poor (systems severely degraded by acoustic conditions)

C 1.2.1.9 Ocean Bioluminescence

Emission of visible light by living marine organisms.

DESCRIPTORS:

Bright (significantly enhances visibility near water surface)
Noticeable (provides some additional light near water surface)
None

Bi-SCD 80-90

C 1.2.1.10 Ocean Ice

The presence of ice at or near the ocean surface.

DESCRIPTORS:

Pack (surface covered with solid ice)
Marginal (broken ice on surface)
Isolated (ice chunks/icebergs possible)
None

C 1.2.1.11 Ocean Ice Thickness

The thickness of ocean surface ice.

DESCRIPTORS:

Great (>8 feet)
Moderate (between 3 and 8 ft)
Minimal (<3 ft)

C 1.2.1.12 Ocean Ambient Noise

The ambient noise level in the ocean caused by marine life, geological factors, or by civilization.

DESCRIPTORS:

High
Moderate
Low

C 1.2.1.13 Ocean Fronts and Eddies

Fronts are tactically significant discontinuities in the water mass, such as horizontal temperature gradient, which significantly alter the pattern of ocean acoustics. Eddies are circular fronts that have broken off from a strong front such as the Gulf Stream.

DESCRIPTORS:

Significant (fronts and eddies will have a major impact on the ability to detect subsurface objects)
Moderate (not the central factor in acoustic conditions)
Negligible

C 1.2.1.14 Divers/Swimmers Underwater Visibility

The maximum distance objects can be seen at the depth which underwater operations are being conducted.

DESCRIPTORS:

Zero (<1 foot)
Poor (1-5 feet)
Fair (6-10 feet)
Good (11-50 feet)
Excellent (51-200 feet)
Unlimited (>200 feet)

Bi-SCD 80-90

C 1.2.1.15 Divers/Swimmers Ocean Depth

The depth of ocean water at a point or for an area.

DESCRIPTORS:

Very shallow (<40 feet)

Shallow (40-60 feet)

Moderate (60-100 feet)

Deep (> 100 feet)

C 1.2.1.16 Divers/Swimmers Ocean Currents

A steady, generally predictable flow, present either in open ocean waters or in littoral coastal ocean waters.

DESCRIPTORS:

Very strong (>1.0 knot)

Strong (0.75-1.0 knots)

Moderate (0.25-0.75 knots)

Mild (<0.25 knots)

C 1.2.2 Ocean Bottom

The characteristics of the sea bottom.

DESCRIPTORS:

Regular (no significant features)

Irregular (sea bottom irregularities)

C 1.2.2.1 Sea Bottom Contours

Gradient of the seabed.

DESCRIPTORS:

Flat (floors of ocean basins, plains)

Gentle (continental shelf)

Moderate (ridges, fracture zones)

Steep (trenches, sea mounts)

C 1.2.2.2 Sea Bottom Composition

Seabed material from the ocean bottom to the shore.

DESCRIPTORS:

Sandy

Silty

Rocky

C 1.2.3 Harbour Capacity

The size and characteristics of a harbour.

DESCRIPTORS:

Large (accommodates many large ships)

Moderate (accommodates a few large ships)

Limited (accommodates one large ship)

Bi-SCD 80-90

Not able to handle large ships

C 1.2.3.1 Harbour Shelter

The amount of protection provided from the open ocean by natural features.

DESCRIPTORS:

Complete (well protected from wind and surf)

Limited

Little or no (completely exposed to wind and surf)

C 1.2.3.2 Harbour Depth

Water level at low tide.

DESCRIPTORS:

Deep (> 60 ft)

Moderate (30 to 60 ft)

Shallow (< 30 ft)

May not be able to handle fully loaded ships)

C 1.2.3.3 Harbour Currents

Moving water caused by tidal change and river runoff.

DESCRIPTORS:

Fast (> 3 knots)

Moderate (1 to 3 knots)

Negligible (< 1 knot)

C 1.2.4 Coastal Characteristics

The characteristics of the shore area, including contiguous waters and land areas.

DESCRIPTORS:

Harsh (difficult grades, surfaces, inshore currents extensive obstacles)

Moderate (moderate grades, currents some obstacles)

Mild (gentle natural factors)

No obstacles

C 1.2.4.1 Coastal Gradient

Slope of the beach, from low tide up to the extreme high tide mark.

DESCRIPTORS:

Gentle (< 2%)

Moderate (2 to 5%)

Steep (> 5%)

C 1.2.4.2 Coastal Composition

Shoreline material, from shallow water to high tide marks.

DESCRIPTORS:

Firm (hard sand, pebbled, rock)

Slippery (shale pieces)

Soft (mud, soft sand)

Bi-SCD 80-90

C 1.2.4.3 Coastal Terrain Features

Those land features that overlook the littoral.

DESCRIPTORS:

Negligible (inland barely rises above high tide mark)

Influential (tree line, embankment)

Controlling (cliffs, hills)

C 1.2.4.4 Coastal Tides

Change in height from low to high tide.

DESCRIPTORS:

Great (> 10 ft)

Moderate (3 to 10 ft)

Small or negligible (< 3 ft)

C 1.2.4.5 Coastal Currents

Flows peculiar to that shoreline area.

DESCRIPTORS:

Extreme (dangerous undertow)

Moderate (some impediment to movement)

Negligible

C 1.2.5 Riverine Environment

Type of riverine environment.

DESCRIPTORS:

River

Canal

Delta

C 1.2.5.1 Riverine Navigability

Category of navigable waterway.

DESCRIPTORS:

Type I (shallow rivers, not navigable by coastal or ocean going vessels)

Type II (rivers navigable by coastal or ocean going vessels)

Type III (deltas, canals)

C 1.2.5.2 Riverine Tidal Turbulence

The extent of turbulence in the tidal zone causing the movement of material such as debris, pollutants, or vegetation, thereby affecting visibility through water.

DESCRIPTORS:

High, Moderate or Low

C 1.2.5.3 Riverine Current

The velocity of flowing water in riverine environment.

Bi-SCD 80-90

DESCRIPTORS:

Strong (> 3 knots)
Moderate (1 to 3 knots)
Gentle (< 1 knot)

C 1.2.5.4 Riverine Bank Gradient

Slope of the land at the water's edge.

DESCRIPTORS:

Gentle (< 5 degrees)
Moderate (5 to 15 degrees)
Steep (> 15 degrees)

C 1.2.6 Shipping Presence

Presence of shipping activity in area.

DESCRIPTORS:

High (active shipping area)
Moderate (some shipping activity in area)
Negligible

C 1.2.6.1 Shipping Density

The general level of shipping in an area.

DESCRIPTORS:

Heavy (> 10 vessels per 60 square mile area)
Moderate (5-10 vessels per 60 square mile area)
Light (< 5 vessels per 60 square mile area)

C 1.2.6.2 Shipping Type

The primary characteristics of the shipping in an operating area.

DESCRIPTORS:

Ocean going (vessels over 200 feet long)
Coastal (vessels between 50-200 feet long)
Small craft (vessels < 50 feet long)
Mixed (combination of vessel sizes)

C 1.2.6.3 Shipping Identifiability

The physical characteristics of vessels that allow them to be identified to include size, markings, unique hull forms, observable activity, electromagnetic emissions, and communications capability.

DESCRIPTORS:

Easy (minimal assets required to identify vessels)
Moderate (moderate level of assets required to identify vessels)
Difficult (substantial assets required to identify vessels)

C 1.3 AIR

Bi-SCD 80-90

Characteristics of the lower atmosphere, to include climate, visibility, and weapons effects.

DESCRIPTORS:

Natural (climate, visibility)

Induced (atmospheric weapons effects)

C 1.3.1 Climate

Aggregate long-term weather history for a region.

DESCRIPTORS:

Tropical

Temperate

Arctic

Arid

C 1.3.1.1 Season

Periods of the year characterized by changes in temperature, daylight length, storm activity, and precipitation.

DESCRIPTORS:

Winter (cold short days)

Spring (wet moderate temperatures)

Summer (hot long days)

Fall (cool, dry weather)

C 1.3.1.2 Weather Systems

Systems that determine weather over the next 2 to 5 days.

DESCRIPTORS:

Clear (high pressure)

Unsettled (low pressure)

Major storm

C 1.3.1.3 Weather

Current weather (next 24 hours).

DESCRIPTORS:

Clear

Partly cloudy

Overcast

Precipitating

Stormy

C 1.3.1.3.1 Air Temperature

Atmospheric temperature at ground level (degrees Fahrenheit).

DESCRIPTORS:

Hot (> 85 F)

Temperate (40 to 85 F)

Cold (10 to 39 F)

Bi-SCD 80-90

Very cold (< 10 F)

C 1.3.1.3.2 Barometric Pressure

Measured surface air pressure.

DESCRIPTORS:

High (>30.20)

Rising

Falling

Low (< 29.50)

C 1.3.1.3.3 Surface Wind Velocity

The speed at which air moves through the atmosphere at an altitude up to 500 feet.

DESCRIPTORS:

Light (< 7 mph)

Moderate (7 to 24 mph)

Strong (25 to 46 mph)

High (47 to 72 mph)

Hurricane force (> 73 mph)

C 1.3.1.3.3.1 Low Altitude Wind Velocity

The speed at which air moves through the atmosphere at an altitude between 500 to 10,000 feet.

DESCRIPTORS:

Light (< 7 mph)

Moderate (7 to 24 mph)

Strong (25 to 46 mph)

High (47 to 72 mph)

Very High (> 73 mph)

C 1.3.1.3.3.2 Medium Altitude Wind Velocity

The speed at which air moves through the atmosphere at an altitude between 10,000 and 25,000 feet.

DESCRIPTORS:

Light (< 20 mph)

Moderate (20 to 50 mph)

Strong (50 to 100 mph)

High (100 to 150 mph)

Very High (> 150 mph)

C 1.3.1.3.3.3 High Altitude Wind Velocity

The speed at which air moves through the atmosphere at an altitude higher than 25,000 feet.

DESCRIPTORS:

Light (< 20 mph)

Moderate (20 to 50 mph)

Bi-SCD 80-90

Strong (50 to 100 mph)
High (100 to 150 mph)
Very High (> 150 mph)

C 1.3.1.3.4 Wind Direction

The relative direction of the air moving through the atmosphere.

DESCRIPTORS:

Head Wind
Crosswind
Tail Wind

C 1.3.1.3.5 Relative Humidity

A measure of water vapour in the air.

DESCRIPTORS:

Very Low (< 10%)
Low (10 to 50%)
Moderate (50 to 75%)
High (> 75%)

C 1.3.1.3.6 Precipitation

Liquid, freezing and frozen water that falls to the surface.

DESCRIPTORS:

Type and Intensity

C 1.3.1.3.6.1 Precipitation Type

The form or state of water falling to the surface.

DESCRIPTORS:

Liquid (rain or rain showers)
Freezing (liquid water freezing upon contact with the surface)
Frozen (snow, hail, sleet)

C 1.3.1.3.6.2 Precipitation Intensity

The rate of fall (related to the droplet/crystal size).

DESCRIPTORS:

Heavy (>0.3"/hr) Moderate (0.1-0.3"/hr)
Light (trace-<0.1"/hr) and Trace (does not completely wet or cover an exposed area regardless of duration)
Frozen (snow, hail, sleet)

C1.3.1.3.7 Icing

The formation or coating of ice upon surfaces.

DESCRIPTORS:

Severe (accumulates faster than de-icing/anti-icing systems can control/reduce the icing resulting in possible catastrophe)
Moderate (accumulation may be hazardous during short encounters)

Bi-SCD 80-90

Light (accumulation may be a problem during prolonged exposure)

C 1.3.1.3.8 Turbulence and Wind Shear

Rapid changes in air movement over relatively short distances.

DESCRIPTORS:

Extreme (rapid fluctuations in airspeed > 25 kts impossible to control structural damage possible)

Severe (large variations in airspeed approximately 25 kts momentary loss of control)

Moderate (small variations in airspeed of 15-25 kts, changes in aircraft altitude/attitude, but positive control maintained)

Light (slight, erratic changes in altitude/attitude, small variations in airspeed of 5-15 kts)

C 1.3.1.3.9 Altitude

Height above sea level.

DESCRIPTORS:

Low (sea level to 500 ft)

Moderately low (500 to 10,000 ft)

Moderately high (10,000 to 25,000 ft)

Moderately high (10,000 to 25,000 ft)

High (25,000 to 45,000 ft)

Very high (> 45,000 ft)

C.1.3.1.3.10 Weather Observation

Current weather/flight conditions affecting flight rules. next 24 hours).

DESCRIPTORS:

IMC

Night VMC

Night IMC

C.1.3.1.3.11 Ceiling

Height of lowest cloud cover above sea level.

DESCRIPTORS:

Zero (fog)

Very low (<100 feet)

Low (100 to 3,000 feet)

Medium (3,000 to 10,000 feet)

High (>10,000 feet)

C 1.3.2 VISIBILITY

Maximum distance to see an object given the moisture and particulate matter (dust, salt, ash) suspended in the atmosphere.

DESCRIPTORS:

Very low (< 1/8 NM)

Low (1/8 to 1 NM)

Bi-SCD 80-90

Moderate (1 to 3 NM)
Good (3 to 10 NM)
High (10 to 20 NM)
Unlimited (> 20 NM)

C 1.3.2.1 Light

Light available to illuminate objects from natural or manmade sources.

DESCRIPTORS:

Bright (sunny day)
Day (overcast day)
Low (dusk, dawn, moonlit, streetlight lit)
Negligible (overcast night)

C 1.3.2.2 Obscurants

Temporary addition of material (smoke, dust, ash, sand) to the atmosphere.

DESCRIPTORS:

Dense (hides objects)
Moderate (makes objects difficult to see or detect clearly)
Light (slight reductions in ability to see or detect)
None

C.1.3.2.3 Aviation Meteorological Conditions

Visual Meteorological Conditions (VMC). (Conditions that permit flight using external cues and a distinguishable horizon.)

DESCRIPTORS:

Instrument Meteorological Conditions (IMC). (Conditions where a visual horizon is not visible.)

C 1.3.3 Atmospheric Weapons Effects

Nuclear, biological, chemical, or electromagnetic impacts.

DESCRIPTORS:

Immediate danger life, equipment, or facilities
Delayed danger to life, equipment, or facilities
Potential long-term health hazard or degradation of equipment over an extended time

C 1.3.3.1 Nuclear Effects

Threat has capabilities or has used nuclear weapon(s), improvised nuclear device(s), Radiation Dispersal Device(s) (RDD), and/or toxic industrial radiologicals (TIR) to cause immediate and/or delayed casualties.

DESCRIPTORS:

Severe (non-functional requires essentially complete reconstruction)
Moderate (non-functional, requires major repairs)
Light (functional or partially functional, requires minor repairs)

C 1.3.3.1.1 Nuclear Blast/Thermal Effects

Bi-SCD 80-90

Extent of nuclear blast/thermal effects.

DESCRIPTORS:

Severe (non-functional, requires reconstruction)

Moderate (non-functional, major repairs)

Low Light (functional or partially functional, minor repairs)

C 1.3.3.1.2 Nuclear Radiation Effects

Extent of radiation effects (level of exposure to unprotected personnel over period of five days).

DESCRIPTORS:

High (> 400 cGys)

Moderate (200 to 400 cGys)

Low (25 to 200 cGys)

Negligible (< 25 cGys)

Long-term health hazard, e.g., TIR

C 1.3.3.2 Chemical Effects

Threat has capabilities to employ, or has used (one or more of the following) to cause immediate and/or delayed casualties, psychological disruption, and/or disruption of the operational tempo.

DESCRIPTORS:

Blood, blister, choking, incapacitating nerve, tear, and/or novel

Persistent, semi-persistent, non-persistent

Artillery, bomb, bomblet, missile, rocket, spray (aerial), (ground), unconventional, or no.

For SSC: Toxic industrial chemical (TIC)

Release other than attack (ROTA)

Collateral damage

C 1.3.3.3 Biological Effects

Threat has capabilities to employ, (or has used one or more of the following) to cause immediate and/or delayed casualties, psychological disruption, and /or disruption of the operational tempo.

DESCRIPTORS:

Pathogen (specify e.g., plague, anthrax, botulism, VEE)

Toxin (specify, e.g., ricin, bottoxin, venom)

Other agents of biological origin (e.g., bio-regulators and modulators)

Contagious (yes or no)

Lethal (days), lethal (latent), or incapacitating

Persistency (yes or no)

Artillery bomb, bomblet, missile, rocket, spray (aerial), spray (ground), unconventional, or no

For SSC: Biohazard

Toxic Industrial Biological (TIB)

Antipersonnel, anti-animal, anti-crop

Bi-SCD 80-90

C 1.3.3.4 Electromagnetic Effects

Extent to which electronic warfare, nuclear electromagnetic pulse, or directed energy are employed.

DESCRIPTORS:

Widespread damage/disruptions of electronic equipment

Localized damage/disruption of electronic equipment

Minor upsets and temporary outages

C 1.3.4 Airspace Availability

Freedom of airspace from confining factors such as FIRs, restricted areas, MOAs, Fire Support Control Zones, Air Space Coordination Areas that limit freedom of flight.

DESCRIPTORS:

Unrestricted (no confining factors)

Moderate (some confining factors)

Limited (extensive confining factors)

C 1.3.5 RF Spectrum

Extent to which use or exploitation of the radio frequency (RF) spectrum is inhibited or degraded due to overcrowding, unavailability or operational restrictions caused by friendly, enemy or neutral forces (e.g., civil air government, private citizenry, etc). Such use or exploitation may include, but not limited to: communications (voice and/or data), emissions control, C2 attack or protect, jamming, or electronic support

DESCRIPTORS:

Unrestricted (no limitations)

Moderate (some limiting factors)

Limited (numerous limiting factors)

Severely Degraded (virtually unavailable for use due to physical or operational restrictions)

C 1.4 SPACE

Characteristics of the earth's upper atmosphere and the environment at satellite altitudes.

DESCRIPTORS:

Natural (high energy particles)

Induced (objects in space)

C 1.4.1 Objects in Space

Satellites, vehicles, particles, and debris in orbit around the earth.

DESCRIPTORS:

Communications satellites

Navigation satellites

Reconnaissance satellites

Environmental satellites

Surveillance satellites

Weapons

Bi-SCD 80-90

Debris

C 1.4.1.1 Orbit Density

Existing satellites and space junk in a particular orbit.

DESCRIPTORS:

High (many objects)

Moderate (a scattering of objects)

Low (very few objects)

C 1.4.1.2 Orbit Type

A space object's elliptical path around the earth.

DESCRIPTORS:

Geosynchronous (orbit matches earth's rotation)

Sun synchronous (over the same part of the earth at the same time each day)

Medium earth

Polar

Molnyia (highly elliptical)

Low earth

C 1.4.2 Natural Environment

Geomagnetic and solar activity, high-energy particles at satellite altitudes, ionospheric disturbances.

DESCRIPTORS:

Geomagnetic storms

Solar flares

Solar radio bursts

Scintillation

Atmospheric drag

C 1.4.2.1 Solar and Geomagnetic Activity

Level of solar and/or geomagnetic activity; encompasses secondary effects (atmospheric drag on satellites, radiation hazards, etc.).

DESCRIPTORS:

High (significant disturbances)

Moderate (moderate disturbances)

Little or None (very low presence of disturbances)

C 1.4.3 High Energy Particles

Level of high-energy particles caused by solar activity.

DESCRIPTORS:

High (significant presence of high energy particles)

Moderate (moderate presence of high energy particles)

Little or None (very low presence of high energy particles)

Bi-SCD 80-90

Conditions of the Military Environment

This section includes factors related to military forces. The organisation of military conditions includes the major sub-categories of mission, forces and conditions related to the areas of command, control, and communications; intelligence; deployment, movement, and manoeuvre; firepower; protection; sustainment; threat; and conflict. Conditions in this section may apply to either friendly or enemy forces, as indicated parenthetically after the name of the condition (friendly, enemy).

C 2.0 MILITARY ENVIRONMENT

Those factors related to the mission, command structure, and forces. These factors can apply to Allied forces, Partner and coalition forces, neutral forces, and enemy forces.

C 2.1 MISSION

Those factors that frame and influence the execution of the mission assigned or understood.

DESCRIPTORS:

Straightforward (well within current capabilities)

Moderately challenging (safely within current capabilities)

Stressful (very demanding mission relative to current capabilities)

C 2.1.1 Mission Instructions

Clarity of instructions, directives, policy guidance (including end state), strategies, or status of forces agreements, below the Political Authority level.

DESCRIPTORS:

Clear (addresses likely issues and hedges, leaves little or no ambiguity as to intent, and allows freedom of action where required)

Minimal (few in number, leaves most decisions to the on-scene commander)

Restrictive (a large number of instructions; leaves little discretion to the on-scene commander)

C 2.1.1.1 Command Level

The level of command directing the mission.

DESCRIPTORS:

SACEUR

CJTF Commander

CC Commander

Joint Task Force

Multinational

NRF Commander

NRF CC Commander

C 2.1.1.2 Pre-Existing Arrangements

Bi-SCD 80-90

Those plans, organisations, relationships, and arrangements that existed before the present mission or tasking and that might influence execution of the concept of operations.

DESCRIPTORS:

None
Partial
Strong (e.g., EU)

C 2.1.1.3 Mission Classification

The degree of secrecy assigned to the mission.

DESCRIPTORS:

Overt
Covert

C 2.1.1.4 ROE

Note: The issue of ROE restrictiveness should be addressed as C 2.1.1, Mission Instructions.

DESCRIPTORS:

NATO
SACEUR
UN (applying to UN operations)
Multinational (ROE agreed amongst several nations in a coalition operation)
Partners
NNTCNs

C 2.1.1.5 SOFA

The degree of control a HN cedes over the conduct and punishment of guest forces under Status of Forces Agreements or like instruments.

DESCRIPTORS:

Cooperative
Restrictive

C 2.1.1.6 Military Commitments to Other Nations

The amount of commitment on the part of one nation to assist another.

DESCRIPTORS:

Major (robust use of lift or furnishing of major end items)
Limited (clothing and individual equipment for whole units of battalion size or larger)
Negligible

C 2.1.1.7 Military Commitments from Other Nations

The amount of commitment on the part of other nation to support mission.

DESCRIPTORS:

Major (large contributions of forces, supplies, or other resources)
Limited (some contributions of forces, supplies, or other resources)
Negligible

Bi-SCD 80-90

C 2.1.2 Legal State

The legal state under which military forces are operating.

DESCRIPTORS:

Peace
Crisis Response Operations
War

C 2.1.3 Mission Preparation

Degree to which preparations for mission have been completed at time of mission execution. Includes intelligence, logistic, positioning of units, etc.

DESCRIPTORS:

Completed (fully developed plan, including approval)
Partially Completed (an OPLAN has been developed but is not fully refined and approved)
Outline (a concept of operations or a draft OPLAN has been produced)
None

C 2.1.4 Theatre Dimensions

The location and size of the theatre or sub-area of a theatre and the time available for mission accomplishment.

DESCRIPTORS:

Massive (a theatre of war, a vast area with long distances)
Medium (a theatre of operations with a large area)
Small (a joint operations area)

C 2.1.4.1 Location

The location where the task must be performed.

DESCRIPTORS:

Ashore
Afloat
Airborne
Space

C 2.1.4.2 Theatre(s)

The number of theatres in which actions are taking place. Does not include peaceful transit of geographic combatant commander's AOR.

DESCRIPTORS:

Single
Two
More than Two

C 2.1.4.3 Joint Operations Area

Physical scope and breadth of an area designated by the JFC in which joint forces operate.

Bi-SCD 80-90

DESCRIPTORS:

Very small (< 100,000 km²)
Small (100,000 to 300,000 km²)
Moderate (300,000 to 1,000,000 km²)
Large (1,000,000 to 3,000,000 km²)
Very large (> 3,000,000 km²)

C 2.1.4.4 Area of Operations

Physical scope and breadth of an operations area designated by the JFC for land or maritime forces.

DESCRIPTORS:

Very small (< 99,999 km²)
Small (100,000 to 300,000 km²)
Moderate (300,000 to 1,000,000 km²)
Large (1,000,000 to 3,000,000 km²)
Very large (> 3,000,000 km²)

C 2.1.4.4 Intertheatre Distance

Mileage between two (intertheatre) locations.

DESCRIPTORS:

Very short (< 1000 NM)
Short (1,000 to 3,500 NM)
Moderate (3,500 to 5,000 NM)
Long (5,000 to 7,500 NM)
Very long (> 7,500 NM)

C 2.1.4.5 Intratheatre Distance

Mileage between two locations (e.g., airfield to the FEBA).

DESCRIPTORS:

Very short (< 10 NM)
Short (10 to 50 NM)
Moderate (50 to 150 NM)
Long (150 to 500 NM)
Very long (> 500 NM)

C 2.1.5 Time Available

The time available, normally the time allowed, to complete a phase in a concept of operations.

DESCRIPTORS:

Minimal (minutes to hours)
Short (hours to days)
Moderate (days to weeks)
Long (weeks to months)

C 2.1.5.1 Lead Time

Bi-SCD 80-90

The time from receipt of a warning or directive to initiation of military operations.

DESCRIPTORS:

Minimal (minutes to hours)

Short (hours to days)

Moderate (days to weeks)

Long (weeks to months)

C 2.1.5.2 Mission Duration

The time a unit is expected to continue to conduct a mission.

DESCRIPTORS:

Very short (< 30 days)

Short (30 to 90 days)

Medium (90 to 180 days)

Long (180 to 365 days)

Very long (> 365 days)

C 2.2 FORCES

The overall capabilities of the forces of a nation, alliance, or coalition.

DESCRIPTORS:

Strong (large, modern, well-trained, well-equipped, and well-led)

Marginal

Weak (small, old, poorly trained, poorly equipped, poorly led)

C 2.2.1 Forces Assigned

The capabilities of combat and support forces assigned to a combatant commander day-to-day.

DESCRIPTORS:

Strong (planned forces in place)

Marginal (planned defensive forces in place)

Weak (reinforcements needed for defensive operations)

C 2.2.2 Competing Apportionments

The extent to which forces are distributed for planning, in that the same force may be apportioned simultaneously to more than one combatant commander (for planning).

DESCRIPTORS:

None

Two

Multiple

C 2.2.3 Forces Allocated

The extent to which forces are distributed to a commander for accomplishment of assigned mission.

DESCRIPTORS:

Strong (exceeds plan)

Adequate (meets plan)

Bi-SCD 80-90

Marginal (less than plan)

C 2.2.4 Personnel Capability

The extent to which personnel are capable of performing assigned tasks.

DESCRIPTORS:

High (fully trained and equipped)

Partial (partially trained and equipped)

Low (poorly trained and equipped)

C 2.2.4.1 Personnel Nutrition and Health

The degree to which the members of a force are healthy and free of disease.

DESCRIPTORS:

Excellent (> 90%)

Fair (50 to 90%)

Poor (< 50%)

C 2.2.4.2 Personnel Literacy

The literacy level of military personnel.

DESCRIPTORS:

Very high (most with some college)

High (most with high school education)

Moderate (most with no high school, but with some literacy)

Low (most lack basic literacy skills)

C 2.2.4.3 Personnel Physical Conditioning

The level of physical conditioning of military personnel.

DESCRIPTORS:

Excellent (extensive, demanding training)

Good (some organised training)

Poor (no organised training)

C 2.2.4.4 Personnel Morale

The state of a force's spirit and confidence.

DESCRIPTORS:

Excellent (determined, will stand and fight)

Good (under normal circumstances will meet the enemy and give a good account of themselves)

Poor (not committed to the leader or the effort, likely to yield ground or surrender)

C 2.2.4.5 Personnel Experience

The degree to which the civilian and military personnel assigned the task is experienced at the task.

DESCRIPTORS:

High (professional long-term military and civilian personnel)

Normal (mix of professional personnel with new personnel and reserves)

Bi-SCD 80-90

Limited (largely a conscript force or a force with very high turnover of personnel)
Negligible

C 2.2.4.6 Personnel Fatigue

The degrees to which personnel, due to lack of rest, are experiencing fatigue.

DESCRIPTORS:

No (personnel are well rested)

Moderate (personnel operating with inadequate rest decision making skills are somewhat impaired)

Severe (significant impairment to physical and decision making skills need extended recovery period)

C 2.2.5 Modern Military Systems

The availability of modern weapon and C4I systems.

DESCRIPTORS:

Abundant (widely distributed throughout the force)

Adequate (meets mission needs).

Limited (not widely distributed and use closely controlled)

Few (treated as "magic bullet" systems or weapons and very closely controlled)

C 2.2.5.1 Modern Weapons Systems

The availability of modern weapons systems in numbers and types.

DESCRIPTORS:

Abundant (widely distributed throughout the force)

Limited (not widely distributed and use closely controlled)

Few (treated as "magic bullet" systems or weapons and very closely controlled)

C 2.2.5.1.1 Weapon Selection

Given weapons availability, selection and taskings incorporated in operations.

DESCRIPTORS:

TLAM

ALCM

Tomahawk

Harpoon

ATACMS

Aircraft with bombs

C 2.2.5.2 Modern Information & Intelligence Processing Systems

The availability of modern information systems in numbers and types.

DESCRIPTORS:

Abundant (widely distributed throughout the force)

Adequate (meets mission needs)

Limited (not widely distributed and use closely controlled)

Few (treated as "high value" systems and very closely controlled)

Bi-SCD 80-90

C 2.2.5.3 Military Systems Reliability

The qualities of reliability, maintainability, and sustainability built into military systems.

DESCRIPTORS:

High (few breakdowns and those fixed without major effort)

Acceptable (operates at or near established reliability standards maintainable in theatre)

Low (often breaks down or must be repaired by specialists in rear areas)

C 2.2.5.4 Military Systems Maturity

The development and deployment status of a force's leading edge technology systems.

DESCRIPTORS:

Brass Board (pre-production state of development)

Early (first units equipped and trained with new systems)

Evolved (numerous units equipped with new systems follow-on systems are in development)

Advanced (fully developed and integrated into the force)

Overage (questionable reliability)

C.2.2.5.5 Modern Military Simulation Systems

The availability of modeling and simulation systems.

DESCRIPTORS:

Abundant (widely distributed throughout the force)

Limited (not widely distributed and use is closely controlled.)

Few (treated as "magic bullet" systems or weapons and very closely controlled)

C 2.2.6 Interoperability

The ability of systems, units, or forces to interact and operate effectively with other systems, units, or forces.

DESCRIPTORS:

Full (systems, units, or forces can integrate easily, both vertically and horizontally)

High (systems, units, or forces can be integrated vertically and horizontally with few workarounds)

Some (systems, units, or forces can only partially interoperate)

None

C 2.2.7 Military Force Relationships

The extent to which force elements (e.g., military branches, paramilitary organisations) cooperate with each other and adhere to the chain of command.

DESCRIPTORS:

Strong (act as single team and adhere to chain of command)

Moderate (some individual force element agendas, but general adherence to chain of command)

Poor (uncooperative, force elements may act independently)

Bi-SCD 80-90

C 2.3 COMMAND, CONTROL, AND COMMUNICATIONS (C3)

C 2.3.1 Command Arrangements

Type of relationships or procedures set up among forces and their staffs for the effective management of forces and accomplishment of the mission.

DESCRIPTORS:

NATO
Multinational
Joint
Service Unilateral
Ad Hoc

C 2.3.1.1 Joint Staff Integration

The extent to which staffs of two or more forces or agencies of the same nation have integrated their doctrine, staff, force techniques and procedures, and training.

DESCRIPTORS:

Full (broadly based and fully interactive)
Partial (some common experience and/or some level of integration)
Poor (not broadly based and has not worked together)

C 2.3.1.2 Multinational Integration

The extent to which staffs of two or more forces, or agencies of two or more nations, have integrated their senior command and staff billets, information and intelligence, doctrine and procedures, logistics, and training.

DESCRIPTORS:

Full (broadly based and fully interactive)
Partial (indications are there is some common experience and/or some level of integration)
Poor (not broadly based and has not worked together)

C 2.3.1.3 Staff Expertise

The level of skill and experience that staff personnel can provide to the commander, with regard to operational art and logistics, the capabilities and limitations of force elements, and tactics, techniques, and procedures.

DESCRIPTORS:

High (staff works well together and has a good grasp of the technical, tactical, and logistic aspects of the forces assigned or likely to be assigned)
Moderate (staff effective and generally knows the technical, tactical, and logistic aspects of assigned forces)
Limited (staff lacks skill in working together or lacks knowledge of assigned forces)

C 2.3.1.4 Pre-Existing Command

The extent to which a command and staff headquarters structure exists.

DESCRIPTORS:

None (ad hoc)

Bi-SCD 80-90

Partial (pre-designated command organisation, with at least some training of augmentees)
Strong (existing and functioning)

C 2.3.1.5 Command Authority

A NATO commander's degree of authority over assigned forces.

DESCRIPTORS:

Operational Command (OPCOM)
Operational Control (OPCON)
Tactical Command (TACOM)
Tactical Control (TACON)

C 2.3.1.6 Communications Connectivity

The degree to which communications can be maintained up and down the chain of command and horizontally.

DESCRIPTORS:

Continuous (operates with almost no interruptions)
Intermittent (some interruptions will occur)
Periodic (only operates periodically)
Comm. Out

C 2.3.1.7 Classification

The highest level of information security at which a headquarters or force is operating.

DESCRIPTORS:

NATO Unclassified
NATO Restricted
NATO Confidential
NATO Secret
NATO Cosmic Top Secret
Multinational Designated

C 2.3.1.8 Information Exchange

The freedom with which information (e.g., intelligence and logistic data and operations plans) can be distributed or released within a staff or to operating units, to include among allies or coalition partners.

DESCRIPTORS:

Unrestricted
Restricted
Highly restricted

C 2.3.1.9 Information Volume

The volume of data or information generated or made available to decision makers.

DESCRIPTORS:

High (>50 inputs per hour, often containing conflicting information)
Moderate (20-50 inputs per hour, containing some conflicting information)

Bi-SCD 80-90

Low (<20 inputs per hour, containing highly consistent information)

C 2.3.1.10 Command Relationships

The complexity of command relationships required to train, organise and generate the force prior to transfer to the joint force commander for employment.

DESCRIPTORS:

Minimal (employing commander responsible for the forces)

Moderate (employing commander supported by 1 or 2 supporting commanders or agencies)

Complex (employing commander supported by more than 3 commanders or agencies)

C 2.3.2 Military Style

The approach of a nation and its commanders to the conduct of military operations.

DESCRIPTORS:

Predictable (closely follows doctrine, narrow, inflexible)

Conventional (range of capabilities, some flexibility)

Innovative (adapts easily to changing circumstances)

C 2.3.2.1 Leadership Style

The approach of the commander to the exercise of command and handling of subordinates.

DESCRIPTORS:

Autocratic

Bureaucratic

Participative

Mission Orders

C 2.3.2.2 Force Emphasis

The special weight or importance placed by a nation in the specific characteristics or composition (e.g., land, sea, air) of its armed forces.

DESCRIPTORS:

Nuclear

Nuclear triad

Balanced conventional

Land

Maritime

Air

Space

Unconventional

C 2.3.2.3 Flexibility of Warfare Style

Extent to which a nation's armed forces can adapt to various styles of warfare (e.g., moving from conventional to unconventional warfare).

DESCRIPTORS:

High

Bi-SCD 80-90

Moderate
Low

C 2.3.2.4 Component Headquarters Location

The location of component command headquarters with relation to the joint force commander's headquarters.

DESCRIPTORS:

Separate
Collocation of some
Collocation of all

C 2.4 INTELLIGENCE

C 2.4.1 Warning

The degree of certitude of warning received.

DESCRIPTORS:

Unambiguous
Ambiguous

C 2.4.2 Intelligence Data Base

The availability of intelligence data or threat assessments to support a mission or task.

DESCRIPTORS:

Abundant (multiple sources of current intelligence data on most or all targets)
Adequate (at least one current source of intelligence on most targets)
Marginal (intelligence data is neither current nor complete)
Negligible (Little or no current intelligence on any targets)

C 2.4.3 Theatre Intelligence Organisation

The status of an intelligence collection, processing, and production organisation within a theatre or dedicated to the theatre.

DESCRIPTORS:

Mature
Growing
Immature

C 2.4.4 Theatre Intelligence Access

The ability of intelligence gathering resources to penetrate and cover the AOR.

DESCRIPTORS:

Easy (easily penetrable)
Minimally difficult (penetrable with minimal difficulty)
Difficult (penetrable with major difficulty)
Negligible (impenetrable)

C 2.4.5 Intelligence Countermeasure Capability

Bi-SCD 80-90

The ability of a nation to detect and counter intelligence gathering by an enemy.

DESCRIPTORS:

Strong (thoroughly understand / control enemy sources)

Moderate (partial understanding / control over enemy sources)

Weak (little understanding / control over enemy sources)

C 2.4.6 Certitude of Data

The degree of confidence in the accuracy of intelligence data.

DESCRIPTORS:

Absolute (100% confidence)

High (>90%)

Moderate (50-90%)

Low (25-50% confidence)

Little or None (<25% confidence)

C 2.4.7 Intelligence Dissemination and Receipt

Proper communications paths, dissemination suite, receipt suite, and display suite between producers and customers are in place to allow timely transmission and receipt of information.

DESCRIPTORS:

Fully exists

Partially exists

Does not exist

Little or None (<25% confidence)

C 2.4.8 EW Capability

The ability to make use of electromagnetic and directed energy control. Use the electromagnetic spectrum to attack the enemy.

DESCRIPTORS:

Strong capability against the enemy

Moderate capability

Weak capability

Little or None (<25% confidence)

C 2.5 DEPLOYMENT, MOVEMENT, & MANOEUVRE

C 2.5.1 LOC and Planning Status

Status of lines of communication and planning for deployment, movement, or manoeuvre.

DESCRIPTORS:

Good (secure LOCs and planning well advanced)

Poor (LOCs not secure or planning not well advanced)

Bad (neither secure LOCs nor planning exists)

Bi-SCD 80-90

C 2.5.1.1 Deployment Planning

Availability of time-phased force and deployment data (Multinational Detailed Deployment Plan (MNDDP) needed to execute a deployment.

DESCRIPTORS:

Full (planned, sourced and refined MNDDP exists)

Partial (an applicable MNDDP has been in development)

None (no planning has been conducted for this size force or this area)

C 2.5.1.2 Deployment Lead Time

The amount of time to travel from home station to arrival where the unit will be deployed.

DESCRIPTORS:

Long (weeks to months)

Moderate (days to weeks)

Minimal (days)

C 2.5.1.3 Intertheatre LOCs

Freedom of movement for forces and materiel between theatres.

DESCRIPTORS:

Secure

Contested

Unsecured

C 2.5.1.4 Intratheatre LOCs

Freedom of movement for forces and materiel within a theatre.

DESCRIPTORS:

Secure

Contested

Unsecured

C 2.5.1.5 Entry Capability

Extent to which a military force is capable of entering an area of operations unopposed or opposed.

DESCRIPTORS:

Strongly Opposed

Moderately Opposed

Unopposed

Administrative

C 2.5.1.6 In-Transit Visibility Capability (draft).

Extent to which deployable forces are able to provide data on forces and materiel to SHAPE via automated identification technologies.

DESCRIPTORS:

Full (forces and materiel all use AIT compatible with feeder systems)

Partial (some unit AIT and feeder systems use)

Bi-SCD 80-90

None (no unit AIT and feeder system ITV available)

C 2.5.2 Lift Assets

Adequacy of lift assets for moving and supporting forces.

DESCRIPTORS:

Robust (as planned)

Limited (somewhat less than planned)

Little or no

C 2.5.2.1 Airlift Assets

Availability of airlift assets for deployment or employment of forces.

DESCRIPTORS:

Robust (as planned)

Limited (somewhat less than planned)

Little or no

C 2.5.3.1 Intermediate Staging Bases

Availability of intermediate bases and ports for staging aircraft, ships, and troops for strategic deployment.

DESCRIPTORS:

Robust (as planned)

Limited (somewhat less than planned)

Little or no

C 2.5.3.2 Overflight/Passage Rights

Right to over fly national territory or national waters or to transit sovereign waters.

DESCRIPTORS:

Granted (most direct route is available)

Limited (fairly direct route is available)

Restricted (best route is quite indirect)

C 2.5.3.3 En Route Supply

Availability of supply needed to ensure the movement of forces.

Includes refuelling (or bunkering), arming, maintaining, troop support, and basing.

DESCRIPTORS:

Robust (as planned)

Limited (somewhat less than planned)

Little or no

**C 2.5.4 Reception, Staging and Onward
Movement (RSOM)**

Ability to support the delivery, disposition, and ITV of units, equipment, and personnel that arrive by intertheatre strategic lift or intratheatre lift.

DESCRIPTORS:

Bi-SCD 80-90

Robust (as planned)
Limited (somewhat less than planned)
Little or no

C 2.5.4.1 Reception Facilities

Extent to which facilities are available to allow off-load of ships or aircraft.

DESCRIPTORS:

Robust (as planned)
Limited (somewhat less than planned)
Little or no

C 2.5.4.1.1 Wharfage

The amount of berthing space available to load or unload ships.

DESCRIPTORS:

Generous (> two FSS size vessels)
Moderate (one to two FSS size vessels)
Little (< one FSS size vessel)

C 2.5.4.1.2 Maximum on Ground (MOG)

The maximum number of aircraft an airfield can physically accommodate at one time for unloading and loading based on dimensions of ramp space and/or runway for runway operations. The physical MOG may be further qualified as a working MOG based on limiting factors.

DESCRIPTORS:

High (> 10)
Medium (4 to 10)
Low (1 to 3)

C 2.5.4.1.3 Runway Length

The length of usable runway.

DESCRIPTORS:

Long (> 8200 ft)
Commercial (5000 to 8200 ft)
Short (3500 to 5000 ft)
Very short (< 3500 ft)

C 2.5.4.1.4 Runway Weight Bearing Capacity

The weight bearing capacity of a runway or the larger airport surfaces.

DESCRIPTORS:

Jumbo (C-5)
Large (B-747)
Medium (C-141, C-17)
Low (C-130)

C 2.5.4.1.5 Flight Deck Configuration

C-37

Bi-SCD 80-90

Deck configuration of Allied Nations' air-capable ships, providing helicopter-landing spot(s).

DESCRIPTORS:

Single-spot
Multi-spot
Carrier (CV)

C 2.5.4.2 Onward Movement Facilities

Facilities available to marshal cargo and personnel and move them forward in the theatre.

DESCRIPTORS:

Robust (extensive)
Limited (less than required)
Little or no

C 2.5.4.2.1 Beddown Facilities

Space available for handling materials and personnel from arriving ships and aircraft.

DESCRIPTORS:

Robust (extensive)
Limited (less than required)
Little or no

C 2.5.4.2.2 Marshalling Facilities

Facilities for assembling, holding, maintaining visibility over and organising supplies and equipment, especially vehicles and transportation, for onward movement.

DESCRIPTORS:

Robust (extensive)
Limited (less than required)
Little or no

C 2.5.4.2.3 Staging Area

Location established for the concentration of units and transient personnel between movements.

DESCRIPTORS:

Robust (extensive)
Limited (less than required)
Little or no

C 2.6 FIREPOWER

C 2.6.1 Degree of Dispersion

The degree to which forces or facilities are concentrated in one area or conform to linear formations or lines, e.g., FLOT, FEBA, or naval battle group formations.

DESCRIPTORS:

Bi-SCD 80-90

High (a dispersed battlefield with no force concentrations and no major sustainment or logistic concentrations or chokepoints)

Moderate (forces are attempting to maintain a fluid situation and large concentrations of sustainment and logistic chokepoints are avoided)

Low (front lines consisting of trenches and other fortifications or massed groupings behind the FEBA)

C 2.6.2 Degree of Camouflage

The degree to which forces, units, items of equipment, or personnel are hidden from visual, electronic, or other forms of detection.

DESCRIPTORS:

High (widespread and effective)

Moderate (neither widespread nor highly effective)

Low

C 2.6.3 Target Hardness

The degree to which a target or set of targets has been protected against firepower attacks.

DESCRIPTORS:

Super (buried to great depth and otherwise protected, e.g., DPRK HARTS)

Heavy (reinforced construction, usually with added protection, such as rock rubble)

Sheltered (e.g., hanger)

Unprotected

C.2.6.3.1 Target Survivability

The degree to which a target or set of targets is capable of defending itself against firepower attacks.

DESCRIPTORS:

High (significant or multiple defensive systems and command and control in place)

Medium (single moderate defensive system and command and control in place)

Low (single, marginal defensive system and command and control in place)

Negligible

C 2.6.4 Preplanned Targets

The degree to which initial fires have been preplanned, particularly in peacetime.

DESCRIPTORS:

Fully (initial targeting complete and current)

Partially (initial targeting either incomplete or dated)

None

C 2.6.5 Target Mobility

The ability of a potential target to relocate.

DESCRIPTORS:

Bi-SCD 80-90

High (dwell time in minutes, can quickly relocate upon detection or taking a combat action)

Good (can move < 30 minutes)

Limited (can move < 90 minutes)

Very limited (several hours to tear down and erect)

None (fixed site)

C 2.6.6 Target Range

The range of a target from an attacking system or unit.

DESCRIPTORS:

Greater than 1500 NM

Between 1000-1500 NM

Between 500-1000 NM

Between 250-500 NM

Between 50-250 NM

Between 30-100 km

Between 10-30 km

Between 3-10 km

Between 1-3 km

Between 0.3-1 km

Less than 0.3 km

C 2.6.7 Collateral Damage Potential

The commander's estimate of the physical damage(s) and collateral effect(s) on non-combatant persons, property, and environment(s) occurring incidental to military operations given the applications of available methods to mitigate concerns in consideration of required military objectives.

DESCRIPTORS:

High (The level of concern is estimated as exceeding specified levels of impact upon non-combatant personnel, facilities, and/or area around the target.)

Low (The level of concern is estimated as below the specified levels of impact upon non-combatant personnel, facilities, and/or area around the target.)

C 2.6.8 Target Thermal Contrast

The temperature differential between background areas and targets.

DESCRIPTORS:

High (greater than 10 °C)

Moderate (+2 °C to 10 °C)

Little or None (< 2 °C)

C 2.6.9 Target Size

The relative size of a target.

DESCRIPTORS:

Point

Distributed

Bi-SCD 80-90

C 2.6.10 Target Speed

The speed a target is capable of manoeuvring.

DESCRIPTORS:

Land: Slow (0 to 15 kph)

Land: Medium (15 to 30 kph)

Land: Fast (>30 kph)

Sea: Slow (0 to 10 knots)

Sea: Medium (11 to 20 knots)

Sea: Fast (21-40 knots)

Sea: Very Fast (>40 knots)

Air: Slow (0 to 100 knots)

Air: Medium (100 to 300 knots)

Air: Fast (300 to 658 knots)

Air: Supersonic (568 to 3,290 knots)

C 2.6.11 Target Cooperativeness

The degree to which a target presents itself to be detected and tracked by an attacking system or unit.

DESCRIPTORS:

Non (does not radiate emission, uses stealth technology, uses cover and concealment, uses deception)

Somewhat (only periodically radiates emissions, employs stealthy tactics)

Very (regularly radiates emissions, does not employ cover and deception or stealth)

C 2.6.12 Target Density

The number of targets on a single axis that must be engaged simultaneously.

DESCRIPTORS:

Single

Few (2 to 7)

Many (>8)

C 2.6.13 Target Altitude

The altitude of a target.

DESCRIPTORS:

Very Low (sea level to 150 feet)

Low (150 to 1,200 feet)

Medium (1,200 to 40,000 feet)

High (40,000 to 90,000 feet)

Very high (> 90,000 feet)

C 2.6.14 Target Depth

The depth of a target.

DESCRIPTORS:

Near Surface (sea level to 120 feet)

Bi-SCD 80-90

Deep (120 to 1,000 feet)
Very Deep (> 1,000 feet)

C 2.7 PROTECTION

C 2.7.1 Rear Area/Local Security

The extent to which the rear area or local area is secure.

DESCRIPTORS:

High
Moderate
Limited

C 2.7.2 Air Superiority

The extent to which operations in the air, over sea and/or, over land can be conducted with acceptable losses due to hostile air forces and air defence systems action.

DESCRIPTORS:

Full (Air Supremacy)
General
Local
None

C 2.7.3 Space Control

The measure by which we gain and maintain space superiority to assure friendly forces can use the space environment while denying its use to the enemy.

DESCRIPTORS:

Full
Partial
None

C 2.7.3.1 Space Platforms

The number of space platforms that are available for the specific joint operations area.

DESCRIPTORS:

Abundant (> 100% required platforms)
Sufficient (> 90% required platforms)
Limited (20 to 75% required platforms)
Severely limited (< 20% required platforms)
None

C 2.7.3.2 Space Platforms (Availability)

The percentage of available time space platforms that can be used over the joint operations area. Time can be limited due to operational procedures, general ephemeris conditions, or sun angle (too high or eclipse).

DESCRIPTORS:

High (> 90 %)

Bi-SCD 80-90

Moderate (60 to 90%)
Low (< 60%)

C 2.7.3.3 Space Platforms (Linkability)

The method required linking the joint operations area commanders to the space platforms.

DESCRIPTORS:

Complex (never been attempted before)
Defined (design on paper)
Proven (fully operational)

C 2.7.4 Maritime Superiority

The extent to which operations on, over, or under the sea can be conducted with acceptable losses due to hostile military naval actions.

DESCRIPTORS:

Full
Local
None

C 2.7.5 Ground Superiority

The extent to which operations on or over land can be conducted with acceptable losses due to hostile military ground actions.

DESCRIPTORS:

Full
Local
None

C 2.7.6 Facility Survivability

Vulnerable (not EMP or shock hardened, not concealed)

DESCRIPTORS:

Shock Hardened
EMP Hardened
Concealed
Mobile
Mobile and Enduring

C 2.7.7 Mobile Unit Survivability

Friendly unit construction, mobility, and self-defence capability.

DESCRIPTORS:

Robust
Moderate
Vulnerable

C 2.8 SUSTAINMENT

Bi-SCD 80-90

C 2.8.1 Sustainment Facilities

Those grounds, buildings, and equipment available to provide and support sustainment of the force.

DESCRIPTORS:

Abundant
Adequate
Limited
None

C 2.8.2 Deployed Supplies

The number of days of supply available to forces in a military operation.

DESCRIPTORS:

Abundant (> 90 days)
Sufficient (30 to 90 days)
Limited (10 to 30 days)
Short (3 to 10 days)
Negligible (< 3 days)

C 2.8.3 National Resupply

The adequacy of national level production and supply stocks and theatre priority, which allows the theatre to draw sustainment from outside of the theatre.

DESCRIPTORS:

Adequate (no impact on defensive or offensive operations due to lack of long-term logistic support)
Sufficient (no impact on defensive operations due to lack of long-term logistic support)
Limited (defensive operations must be tailored to accommodate limits on logistical support)
Negligible (deferred theatre)

C 2.8.3.1 Pipeline Responsiveness

The adequacy of the logistics pipeline to provide retrograde to repair facilities and for repair facilities to issue replacement parts. This includes theatre evacuation, transportation, and repair facility policies affecting the movement and repair of hi

DESCRIPTORS:

Robust (pipeline is active and repair parts move unimpeded)
Slow (Pipeline is bogged down due to lack of retrograde, proper distribution, or bits and pieces needed for repair)
Unresponsive (Pipeline is shut down due to no movement of parts-- on hand stocks are only source of resupply)

C 2.8.4 Pre-positioned Materiel

Equipment or supplies pre-positioned at or near the point of planned use or at a designated location.

DESCRIPTORS:

Bi-SCD 80-90

Extensive (can equip most ground forces and provide fuel and ammunition for air and naval forces apportioned)

Limited (can equip and support early arriving forces)

None

C 2.8.5 Host-Nation Support (HNS)

The extent of civil and military assistance provided by a HN to foreign forces within its territory.

DESCRIPTORS:

Extensive (includes engineering, security, and medical services, which reduce equivalent deployment requirements by > 50%)

Moderate (includes engineering, security, and medical services, which reduce equivalent deployment requirements by 15 to 50%)

Limited (includes engineering, security, and medical services, which reduce equivalent deployment requirements by < 15%)

None

C 2.8.6 Commercial Procurement

The extent to which materiel and services can be procured from the local economy in theatre.

DESCRIPTORS:

Fully available (> 90% of items normally available in the Alliance)

Extensive (50 to 90% of items normally available in the Alliance)

Limited (15 to 50% of items available in the Alliance)

Negligible (< 15% of items available in the Alliance)

C 2.9 THREAT

C 2.9.1 Threat Level

Seriousness of threat to the nation.

DESCRIPTORS:

Extreme (national survival)

Grave (national interest)

Very serious (treaty commitment)

Serious (UN Resolution)

C 2.9.2 Threat Form

Types of potential aggression.

DESCRIPTORS:

Conventional

Unconventional (guerrilla warfare)

Nuclear

Chemical

Biological

Terrorist

Bi-SCD 80-90

Economic
Military Information Operations
Paramilitary organisations

C 2.9.3 Threat Existence

The perceived potential for aggression or harm to a nation, government, or its instrumentalities.

DESCRIPTORS:

Acknowledged (threat is recognized)

Ambiguous (threat is recognized but not well understood)

Unacknowledged (threat is neither recognized nor accepted as genuine)

C 2.9.4 Threat Posture

The timing of potential aggression against friendly forces.

DESCRIPTORS:

Imminent (overt attack has begun)

Ready (preparations for immediate attack completed)

Near-term (preparations for immediate attack noted)

Long-term (long-term indicators noted)

C 2.9.5 Threat Size

The relative size of the potential aggressor to friendly forces.

DESCRIPTORS:

Overwhelming (significantly more enemy than friendly assets)

Large (somewhat more enemy than friendly assets)

Moderate (comparable level of enemy to friendly assets)

Low (less enemy than friendly assets)

C 2.9.5.1 Threat Land Force Size

The relative size of land forces of the potential aggressor to friendly land forces.

DESCRIPTORS:

Overwhelming (significantly more enemy than friendly land forces)

Large (somewhat more enemy than friendly land forces)

Moderate (comparable level of enemy to friendly land forces)

Low (less enemy than friendly land forces)

C 2.9.5.2 Threat Naval Force Size

The relative size of naval forces of the potential aggressor to friendly naval forces.

DESCRIPTORS:

Overwhelming (significantly more enemy than friendly naval forces)

Large (somewhat more enemy than friendly naval forces)

Moderate (comparable level of enemy to friendly naval forces)

Low (less enemy than friendly naval forces)

Bi-SCD 80-90

C 2.9.5.3 Threat Air Force Size

The relative size of air forces of the potential aggressor to friendly air forces.

DESCRIPTORS:

Overwhelming (significantly more enemy than friendly air forces)
Large (somewhat more enemy than friendly air forces)
Moderate (comparable level of enemy to friendly air forces)
Low (less enemy than friendly air forces)

C 2.9.5.4 Threat Space Force Capability

The relative capability of the potential aggressor to inhibit operations of friendly space forces.

DESCRIPTORS:

Overwhelming (significant capability to inhibit operations of friendly space operations)
Large (some advantage in inhibiting friendly space force operations)
Moderate (comparable capability between adversary and friendly space forces)
Low (minimal ability to inhibit space force operations)

C 2.9.5.5 Threat Information Operations Capability

The relative operations capability of the potential aggressor.

DESCRIPTORS:

Large (significant capability to adversely impact friendly forces)
Moderate (some capability to adversely impact friendly forces)
Low (minimal ability to inhibit space force operations)

C 2.9.6 Threat Disposition

The status of deployed forces belonging to a potential aggressor.

DESCRIPTORS:

Full (fully positioned for attack)
Partial (partially positioned for attack)
Little or None (not positioned to initiate attack)

C 2.9.7 Threat Axis

The direction an attack is expected from a potential aggressor.

DESCRIPTORS:

Known
Ambiguous
Single

C 2.10 CONFLICT

C 2.10.1 State of Conflict

Level of conflict in operational area.

DESCRIPTORS:

Pre-hostilities

Bi-SCD 80-90

Preliminary skirmishes
Fully Developed
Mop-up
Cease-Fire
Post-hostilities

C 2.10.2 Breadth of Conflict

Scope and breadth of conflict area.

DESCRIPTORS:

Isolated
Localized
Theatre
Multi-Theatre
Global

C 2.10.3 Type of Conflict

Type of weapons and forces employed.

DESCRIPTORS:

Unconventional
Conventional
Nuclear
Chemical
Biological

Bi-SCD 80-90

Conditions of the Civil Environment

This section includes factors related to a people, their government, politics, culture, and economy that impact military operations. The organisation of civil conditions includes the major subcategories of: political policies, culture, and economy.

C 3.0 CIVIL ENVIRONMENT

Those factors related to a people, their government, history, politics, culture, and economy that impact military operations.

C 3.1 POLITICAL POLICIES

Those factors that derive from the people, their national government, and international and nongovernmental organisations that support or oppose military action.

DESCRIPTORS:

Fully supportive
Mixed support
Neutral
Opposed

C 3.1.1 Domestic Political Support

Support of the people and government in the region (excluding National Command Authorities) for military actions.

DESCRIPTORS:

Full
Limited
Negative

C 3.1.1.1 Domestic Public Support

Public support for the actions of their government.

DESCRIPTORS:

Full (large majority of citizens in support)
Limited (majority of citizens in support, but many with some reservations)
Negative (public opinion in opposition)

C 3.1.1.2 Government Support

Government support of the Chief/Minister of Defence

DESCRIPTORS:

Full (resolution passed)
Non-partisan support)
Limited (resolution passed with restrictions)
Negative (resolution rejected)
Neutral (no resolution offered)

C 3.1.1.3 Interdepartmental/Interagency Relationships

Bi-SCD 80-90

Extent to which Executive Branch of government and other agencies work together toward articulated goals.

DESCRIPTORS:

Strong (fully cooperative)

Correct (partially cooperative)

Uncooperative (working in opposition to one another)

C 3.1.1.4 Legality

The extent to which an act or action is in accordance with domestic or international law.

DESCRIPTORS:

Full

Disputed (ambiguous)

Condemned (clearly violates laws)

C 3.1.1.5 Press Relations

The rapport between the military and the press, and the attitude of the press toward particular military activities.

DESCRIPTORS:

Mutually supportive

Cooperative

Strained

Adversarial

C 3.1.2 International Politics

Those political factors, independent of one's own government, which impact the commander's freedom of action.

DESCRIPTORS:

Supportive

Indifferent

Opposed (unilateral action)

C 3.1.2.1 Major Power Involvement

The major power interests about a region or military operation and the ability and willingness of a particular major power to act on those interests.

DESCRIPTORS:

Active (major power has interests and may be willing to act)

Limited (major power has interests but is not inclined to act)

None (lack of major power interest)

C 3.1.2.2 Foreign Government Stability

The degree to which governments in a region remain in power and are consistent in their policies.

DESCRIPTORS:

High (solid)

Bi-SCD 80-90

Moderate (fluctuating)
Low (unpredictable)

C 3.1.2.3 Foreign Government Support

The willingness of a foreign government to support military actions of another nation.

DESCRIPTORS:

Complete
Diplomatic
Limited
Negative

C 3.1.2.4 Foreign Public Opinion

Foreign public attitude expressed about a military operation.

DESCRIPTORS:

Supportive
Moderately supportive
Indifferent
Moderately opposed
Aggressively opposed

C 3.1.2.5 International Organisation Support

The degree of support expressed by nongovernmental organisations for military actions.

DESCRIPTORS:

Fostering
Limited
Uncertain
None

C 3.1.2.6 Multinational Business Support

The degree of support expressed by multinational business organisations for military actions (e.g., oil companies).

DESCRIPTORS:

Fostering
Limited
Uncertain
None

C 3.1.3 Defence Political Authority Decisions

Decisions taken by the NAC, MC, SECGEN and/or SACEUR with regard to national security policy and strategy.

DESCRIPTORS:

Clear and unrestrictive
Vague
Restrictive

Bi-SCD 80-90

C 3.1.3.1 Number of Crises

The number of crises being addressed by the NAC, MC, SECGEN and/or SACEUR.

DESCRIPTORS:

Large (> two)
Moderate (two)
Small (only one)

C 3.1.3.2 Mission Priority

The relationship of one mission compared to another.

DESCRIPTORS:

High (higher than other current missions)
Moderate (comparable priority with other current missions)
Low (lower than other current missions)

C 3.1.3.3 Mobilization Level

The extent of national mobilization.

DESCRIPTORS:

Volunteerism
Partial Mobilization
Full Mobilization
Total Mobilization

C 3.1.3.3.1 Force Level

The size of mobilization required.

DESCRIPTORS:

Total (all Reserve component forces plus draft)
Full (major force build-up)
Partial (major support units required)
Limited (augmentation by Reserve component personnel or units required)

C 3.1.3.3.2 Draft

Compulsory military service.

DESCRIPTORS:

None
Partial
All males
Full

C 3.1.3.3.3 Mobilization Facilities

Those grounds, buildings, and equipment available to train or retrain an expanding active duty force.

DESCRIPTORS:

Abundant
Adequate

Bi-SCD 80-90

Limited
None

C 3.1.3.4 Restraints on Action

The limitations on a commander's freedom of action attendant to NAC, MC, SECGEN and/or SACEUR assigned mission.

DESCRIPTORS:

Severe (impedes mission accomplishment)
Moderate (alternate COAs can accommodate)
None

C 3.1.3.5 Diplomatic Clearance

For aircraft/ship entry through a foreign nation's sovereign territory or airspace, independent of HN support.

DESCRIPTORS:

Granted (most direct route is available)
Pending
Denied
Not Required

C 3.2 CULTURE

Those aspects of a people that relate to their language, history, customs, economics, religion, and character.

DESCRIPTORS:

Western
Non-Western

C 3.2.1 Language(s)

The spoken and written means of communication.

DESCRIPTORS:

Primarily English
English as secondary
Other

C 3.2.1.1 Language Translation

The types of translations to be performed during the mission, including weaponeering, engineering, intelligence, POW interrogation, and staff coordination.

DESCRIPTORS:

Diplomatic/political (Level 3/4/5)
Technical (Level 3+)
Social (Level 2+)

C 3.2.1.2 Language Translators

The number and type of translators to be used during the mission, including those for weaponeering, engineering, intelligence, POW interrogation, and staff coordination.

Bi-SCD 80-90

DESCRIPTORS:

Numerous (> 50 Level 3+)

Many (10 to 50 Level 3+)

Few (< 10 Level 2/3)

Negligible (in-house capability)

C 3.2.2 Customs Adjustment

Customs within a nation or an area that may require accommodation.

DESCRIPTORS:

Significant

Minor

None

C 3.2.2.1 Societal Openness

The degree to which the population of a nation or an area is open to the presence of people from different nations or cultural backgrounds.

DESCRIPTORS:

Limited (very hard to penetrate)

Moderate

High (easy to penetrate)

C 3.2.2.2 Legal Penalties

The seriousness of legal or religious penalties, in a foreign nation, associated with acts that violate cultural or legal norms.

DESCRIPTORS:

Low

Moderate

High

C 3.2.2.3 Law Source

The basis for current laws and justice (see C 3.2.2.2, Legal Penalties).

DESCRIPTORS:

Koran

English Common Law

Napoleonic Code

C 3.2.3 Religious Beliefs

Strength of adherence to religion, the impact on behaviour, and the degree of domination over the life of a nation.

DESCRIPTORS:

Strong

Moderate

Indifferent

C 3.2.3.1 Religious Unity

Bi-SCD 80-90

Degree of religious unity within a nation.

DESCRIPTORS:

Strong (monolithic)

Moderate (stratified)

Low (fragmented)

C 3.2.3.2 Religious Militancy

The degree to which a religious group believes it can or should impose its views on others, internally or externally, by force of arms, if necessary.

DESCRIPTORS:

Significant (pursues internal domination and exports beliefs by force)

Moderate (politically active internally and exports beliefs by missionary activity)

Limited (disinclined to impose religious views externally)

None

C 3.2.3.3 Religion-State Relationship

The extent to which a given religion influences the civil government of a nation.

DESCRIPTORS:

Dominant (theocracy)

Strong (guides civil law)

Limited (influences civil law)

None

C 3.2.4 Significant Cultural Sites

Restrictions on actions due to the existence of particular sites held by certain cultures or religions to be sacred places or national treasures.

DESCRIPTORS:

Presence of internationally

Presence of locally

None

C 3.2.5 Cultural Unity

The extent to which a country is free from serious ethnic, cultural, and language divisions.

DESCRIPTORS:

High (unified)

Moderate (few divisions, causing minor problems)

Low (serious divisions causes internal conflict)

C 3.2.6 National Character

Perceived behaviour of the populace in a nation or an area.

DESCRIPTORS:

Open and adaptable

Careful and moderate

Closed and rigid

Bi-SCD 80-90

C 3.2.6.1 National Discipline

The historically based perception of a nationality's response to the direction and will of their central government.

DESCRIPTORS:

High (blind adherence)
Moderate (willing conformance)
Limited (questioning acceptance)
Low (rebellious non-conformance)

C 3.2.6.2 National Aggressiveness

Tendency to use national power to achieve goals.

DESCRIPTORS:

High
Moderate
Low

C 3.2.6.3 Nationalism

Belief that the good of the nation is paramount.

DESCRIPTORS:

High
Moderate
Low

C 3.2.6.4 Ethnocentrism

Degree of emphasis on a particular ethnic grouping or background.

DESCRIPTORS:

High
Moderate
Low

C 3.2.6.5 Internationalism

Degree of involvement in international organisations, even to the extent of granting some degree of sovereignty to such an international organisation.

DESCRIPTORS:

Strong (supports supra-national approaches)
Moderate (cooperates with international organisations)
Low (resists involvement of international organisations)
Anti- (actively opposes nongovernmental organisations approaches)

C 3.3 ECONOMY

Those factors that provide a nation with the manpower, materiel and money to allow it to play a role on the military stage and shape that role.

DESCRIPTORS:

Knowledge-based, post-industrial (Third Wave)
Industrial (Second Wave)

Bi-SCD 80-90

Agrarian (First Wave)

C 3.3.1 Population

The population of a nation or region based on the J2 analysis. **DESCRIPTORS:**

Very large (> 150 million)

Large (75 to 150 million)

Medium (30 to 75 million)

Small (5 to 30 million)

Very small (< 5 million)

C 3.3.1.1 Size of Military

The number of people in a nation or region who are currently under arms, or who are trained and available for military service.

DESCRIPTORS:

Very large (> 5 million)

Large (2 to 5 million)

Medium (500,000 to 2 million)

Small (200,000 to 500,000)

Very small (< 200,000)

C 3.3.1.2 Population Growth Rate

The annual change in a nation's population due to birthrates, migration, etc.

DESCRIPTORS:

Exploding (> 2%)

Positive (0.5 to 2%)

Stable (0.5 to -0.5%)

Declining (< -0.5%)

C 3.3.1.3 Educated Population

The general level of education of the people of a nation. Ranked here by average literacy level, however, it is also reflected by (1) total secondary schools, technical schools, and university graduates per 100,000 population; and (2) total schools and u

DESCRIPTORS:

Highly (> 90%)

Moderately (60 to 89%)

Poorly (< 59%)

C 3.3.1.4 Civil Health

The physical and medical condition of a people, ranked here by only one indicator, life expectancy at birth.

DESCRIPTORS:

Robust (> 70 years)

Good (61 to 69 years)

Fair (55 to 60 years)

Poor (< 55 years)

Bi-SCD 80-90

C 3.3.1.5 Health Risk

Disease presence and conditions favourable to disease transmission.

DESCRIPTORS:

Low

Moderate

High

C 3.3.1.6 Civil Unrest

The level of dissension within a nation or region as reflected by acts of civil disobedience or demonstrations against government or government policies.

DESCRIPTORS:

Extensive (weekly incidents)

Moderate (quarterly incidents)

Little (annual incidents)

C 3.3.2 Refugee Impact

Impact of need for humane treatment of refugees and displaced persons on military operations.

DESCRIPTORS:

Severe (highly disruptive)

Moderate (minor impacts)

Negligible

C 3.3.2.1 Refugee Type

The principal reason for population dislocation or migration.

DESCRIPTORS:

Political

Economic

Religious

War

C 3.3.2.2 Refugee Congestion

Degree of disruption of main supply routes, avenues of approach, and LOCs.

DESCRIPTORS:

Severe (stoppages, prolonged slowdowns)

Moderate (speed reduced significantly)

Negligible

C 3.3.2.3 Refugee Care Responsibility

Requirement to provide basic shelter, security, health, sanitation, and nutrition for refugees.

DESCRIPTORS:

Significant (drain on forces)

Moderate (some services provided by other groups)

None

Bi-SCD 80-90

C 3.3.2.4 Refugee Relocation Effort

Degree of effort expended by the military force to place refugees back in their original homes or cities.

DESCRIPTORS:

Significant (drain on forces)

Moderate (performed by other groups)

None

C 3.3.3 Gross Domestic Product (GDP)

The value of all goods and services produced domestically, measured in euros.

DESCRIPTORS:

Very large (> 1000 billion)

Large (500 to 1000 billion)

Medium (100 to 500 billion)

Small (30 to 100 billion)

Very small (< 30 billion)

C 3.3.4 International Economic Position

The relative economic standing of a nation or region.

DESCRIPTORS:

Powerful (G-7+)

Strong (post-industrial)

Moderate (industrial)

Low (newly industrialized)

Poor (pre-industrial)

C 3.3.4.1 Economic Self-Sufficiency

The ability of a nation to sustain itself without support from other nations. It is not only the amount of imports to exports, but also the dependence on the import of a particular product and the uniqueness of that product that can make a nation vulnerable.

DESCRIPTORS:

High (self-sufficient)

Moderate (dependent on other nations for few goods)

Low (dependent on other nations for critical items)

C 3.3.4.1.1 Self-Sufficiency in Food

Amount of food consumption produced locally.

DESCRIPTORS:

High (> 70%)

Moderate (30 to 70%)

Low (< 30%)

C 3.3.4.1.2 Self-Sufficiency in Fuel

Amount of fuel consumption produced locally.

DESCRIPTORS:

High (> 70%)

Bi-SCD 80-90

Moderate (30 to 70%)
Low (< 30%)

C 3.3.4.1.3 Self-Sufficiency in Raw Materials

Amount of raw materials (needed for finished goods consumption) produced locally.

DESCRIPTORS:

High (> 70%)
Moderate (30 to 70%)
Low (< 30%)

C 3.3.4.1.4 Self-Sufficiency in Finished Goods

Amount of finished goods (needed for local economy) produced locally.

DESCRIPTORS:

High (> 70%)
Moderate (30 to 70%)
Low (< 30%)

C 3.3.4.1.5 Self-Sufficiency in Machinery

Amount of machinery (needed for local economy) produced locally.

DESCRIPTORS:

High (> 70%)
Moderate (30 to 70%)
Low (< 30%)

C 3.3.4.2 Fiscal Position

The availability of currency and reserves to support military action.

DESCRIPTORS:

Strong
Adequate
Weak

C 3.3.4.3 Infrastructure Dependence

The degree of infrastructure (roads, shipping/fishing fleet, railroads, pipelines, communications, etc.) required to sustain the economy.

DESCRIPTORS:

Low (excess infrastructure capacity or low economic needs required to sustain economy)
Moderate (economy capable of withstanding some loss of infrastructure)
High (full infrastructure required to sustain basic economy)

C 3.3.5 Industry

The general ability of a nation to produce materiel for warfighting.

DESCRIPTORS:

Highly developed
Moderately developed (produces some materiel that supports military operations)

Bi-SCD 80-90

Limited (depends heavily on imports)

C 3.3.5.1 Industrialization

The extent of industrialization, measured as percent of GDP.

DESCRIPTORS:

Heavy (> 30% GDP)

Moderate (20 to 30% GDP)

Limited (5 to 20% GDP)

Low (< 5% GDP)

C 3.3.5.2 Industrial Growth Rate

Annualised rate of growth in industrial production.

DESCRIPTORS:

High (> +4%)

Moderate (2 to 4%)

Low (0 to 2%)

Declining (0 to -4%)

Dangerously declining (any continuous decline)

C 3.3.5.3 Electrical Production

Electrical generation capacity per capita.

DESCRIPTORS:

High (> 4000 kWh)

Moderate (1000 - 4000 kWh)

Low (< 1000 kWh)

C 3.3.5.4 Armaments Production Capacity

Annual armaments production capacity.

DESCRIPTORS:

Limited

Significant (multiple areas)

Extensive (nearly self-sustaining)

C 3.3.6 National Potential

A nation's ability to expand its economy and thus its war-making potential.

DESCRIPTORS:

Large (ability to rapidly convert industry to defence)

Moderate (ability, over time, to convert industry to defence)

Limited (little or no ability for conversion to defence)

C 3.3.6.1 Transportation Infrastructure

Adequacy of railroads, highways, inland waterways, pipelines, sea and airports, merchant marine ships, and telecommunication stations.

DESCRIPTORS:

Extensive

Bi-SCD 80-90

Moderate
Limited

C 3.3.6.2 Telecommunications Infrastructure

Extent of national capability for transmission, emission, or reception of signals, writings, images, sounds, or information by wire, radio, visual, or any other means.

DESCRIPTORS:

Extensive (strong, modern capability)
Moderate (significant infrastructure, but not modern)
Limited

C 3.3.6.3 Available Capital

A nation's available capital, including capital markets (banks, pension funds), capital goods (manufactured products used to produce other goods), and capital formation.

DESCRIPTORS:

Abundant (unlimited)
Ample
Modest
Meagre (unavailable internally)

C 3.3.7 Science and Technology

The level of effort and ability of a nation to develop and exploit science and technology.

DESCRIPTORS:

Abundant
Ample
Modest
Insignificant

C 3.3.7.1 Basic Research

The amount of a nation's intellectual resources applied to basic research.

DESCRIPTORS:

Abundant
Ample
Modest
Insignificant

C 3.3.7.2 Research Application (Military)

A nation's ability to turn basic research into (militarily) useful products.

DESCRIPTORS:

Abundant
Ample
Modest
Insignificant

Bi-SCD 80-90

C 3.3.7.3 High Technology Production

A nation's ability to mass-produce high-technology products.

DESCRIPTORS:

Abundant
Ample
Modest
Insignificant

C 3.3.7.4 Information Management

A nation's ability to collect and process information.

DESCRIPTORS:

Extensive (fully integrated and networked)
Good (partially integrated and networked)
Fair (poorly integrated, but with access to Internet)
Poor (limited distributed-computer network)

C 3.3.7.5 Toxic Industrial Materials (TIM) present in the Civilian Sector

Toxic Industrial Materials include any material, which is toxic and/or lethal and which is not designed specifically for military purposes; however, it may be employed as a warfare agent.

DESCRIPTORS:

TIM with quantity and location
TIC with quantity and location
TIB with quantity and location
TIR with quantity and location

TERMS AND DEFINITIONS

Command-Linked Tasks. Discrete events or actions designated by a joint force commander that must be performed by commands and agencies outside the command authority of the joint force, if the joint force is to successfully perform its missions. Command-linked tasks are designated by the supported joint force commander, but are normally scheduled for training, evaluated, and assessed by the organization providing the support.

Conditions. Those variables of an operational environment or situation in which a unit, system, or individual is expected to operate that may affect performance.

Criterion. The minimum acceptable level of performance associated with a particular measure of task performance. It is often expressed as hours, days, percent, occurrences, minutes, miles, or some other command-stated measure.

Essential task. Tasks based on mission analysis and approved by the commander that are absolutely necessary, indispensable, or critical to the success of a mission.

Joint exercise. A joint military maneuver, simulated wartime operation, or other CJCS- or combatant commander-designated event involving planning, preparation, execution, and evaluation. A joint exercise involves forces of two or more Military Departments interacting with a combatant commander or subordinate joint force commander, involves joint forces and/or joint staffs, and is conducted using joint doctrine or joint tactics, techniques, and procedures.

Joint Mission Essential Task (JMET). A mission task selected by a joint force commander deemed essential to mission accomplishment and defined using the common language of the UJTL in terms of a task. Force providers will also select additional tasks in accordance with their joint training mission for assigned combatant headquarters and forces and deemed essential to the mission of the combatant headquarters and forces.

Measure. Provides the basis for describing varying levels of task performance.

Military training. The instruction of personnel to enhance their capacity to perform specific military functions and tasks; the exercise of one or more military units conducted to enhance combat readiness.

Mission. The task, together with the purpose, that clearly indicates the action to be taken and the reason for the action. In common usage, especially when applied to lower military units, a duty assigned to an individual or unit; a task. 3. An assignment

Bi-SCD 80-90

with a purpose that clearly indicates the action to be taken and the reason therefore.

Mission Essential Task. A task that the commander has designated as essential to mission accomplishment.

Mission Essential Task List (METL). A list of METs selected by a commander to accomplish an assigned or anticipated mission. A METL includes associated tasks, conditions, and standards, and requires the identification of command-linked and supporting tasks.

Operation. A military action or the carrying out of a strategic, tactical, Service, training, or administrative military mission; the process of carrying on combat, including movement, supply, attack, defense, and maneuvers needed to gain the objectives of any battle or campaign.

Operational Capabilities. Capabilities a unit must possess to accomplish its assigned missions. The requirements are amplified in force standards specific to each service.

Specified task. A task explicitly stated and assigned.

Standard. An exact value, a physical entity, or an abstract concept, established and defined by authority, custom, or common consent to serve as a reference, model, or rule in measuring quantities or qualities, establishing practices or procedures, or evaluating results. A fixed quantity or quality. (AAP-6(2003)) The minimum acceptable proficiency required in the performance of a task. For mission-essential tasks of joint forces, each task standard is defined by the joint force commander and consists of a measure and criterion.

Standardization. The development and implementation of concepts, doctrines, procedures and designs to achieve and maintain the required levels of compatibility, inter-changeability or commonality in the operational, procedural, materiel, technical and administrative fields to attain interoperability. Note: the three levels of standardization in ascending order are: compatibility, inter-changeability and commonality. (AAP-6(2003))

Supporting task. Specific activities that contribute to the accomplishment of a JMET. Supporting tasks associated with a command's or agency's mission-essential task list are accomplished by the joint staff or subordinate commands or agencies.

Task. A discrete event or action that enables a mission or function to be accomplished by individuals or organizations. Tasks are based upon doctrine, TTPs, or an organization's SOP, and are generated by mission analysis.

Training. The generic term for the permanent process of preserving and improving the ability of military individuals, staffs and forces to conduct sound military operations. It encompasses individual and collective training, education and exercises.

Bi-SCD 80-90

Training Goal. A general description of an envisaged end-state to be reached through training.

Training Objective. A desired goal expressed in terms of performance under set conditions related to a defined standard. It describes the knowledge, skills or attitudes to be reached during the conduct of training.

Training Requirement. The difference between the actual standard of knowledge, skills or attitude and the standard defined in the relevant training objective under the same conditions.

Transfer of Authority. Within NATO, an action by which a member nation or NATO Command gives operational command or control of designated forces to a NATO Command. (AAP-6(2003))

Weapon of Mass Destruction (WMD). A weapon that is capable of a high order of destruction and of being used in such a manner as to destroy people, infrastructure or other resources on a large scale.

ABBREVIATIONS and ACRONYMS

AADC	area air defence commander
AAR	after action report
AAW	anti-air warfare
ACA	airspace control authority
ACC	air component command
ACL	allowable cabin load
ACSA	acquisition cross-Service agreement
ACTD	Advanced Concepts Technology Demonstration
ADA	air defence artillery
ADL	Advanced Distributed Learning
