

NORTH ATLANTIC MILITARY COMMITTEE
COMITE MILITAIRE DE L'ATLANTIQUE NORD

NATO Headquarters
Boulevard Leopold III - B-1110 Bruxelles

15 March 2002

MC 336/2 (FINAL)

FINAL DECISION ON MC 336/2

NATO PRINCIPLES AND POLICIES FOR
MOVEMENT AND TRANSPORTATION (M&T)

1. On 8 March 2002, the North Atlantic Council agreed MC 336/2 (Military Decision) under the designation C-M(2002)10.

FOR THE MILITARY COMMITTEE:

SIR PAUL HADDACKS
Vice Admiral, UKNA
Director
International Military Staff

NOTE: This Final Decision Sheet shall now be attached to MC 336/2 (Military Decision) and MC 336/2 as the top sheet. Page numbering of the complete document when this decision is attached as follows:

MC 336/2 (Final)	-	Page i
MC 336/2 (Military Decision)	-	Page 1
MC 336/2 (Enclosure)	-	14 pages

MC 336/2 (Military Decision)

SECRETARY GENERAL, NORTH ATLANTIC TREATY ORGANISATION

(THROUGH THE CIVILIAN CO-CHAIRMAN, SENIOR NATO LOGISTICIANS'
CONFERENCE)

**MILITARY DECISION ON MC 336/2 NATO PRINCIPLES AND POLICIES FOR
MOVEMENT AND TRANSPORTATION (M+T)**

1. On 17 January 2002 the Military Committee agreed MC 336/2, NATO Principles and Policies for Movement and Transportation (M+T), a copy of which is attached at Enclosure 1.
2. MC 336/2 is forwarded for consideration and approval by the North Atlantic Council. Once approved, MC 336/2 (Final) will supersede MC 336/1 (Final), 27 Feb 1998.
3. This document clears IMSWM-386-01, 21 Nov 2001 and IMSWM-386-01(SD1), 9 Jan 2002.

FOR THE MILITARY COMMITTEE:

SIR PAUL HADDACKS
Vice Admiral, UKNA
Director
International Military Staff

INTRODUCTION

1. It is essential to the Alliance's military credibility that the capability exists through, inter alia, multinational cooperation to deploy forces in a timely manner in order to undertake the full spectrum of Alliance roles and missions. For collective defence tasks, this requires the ability to move forces within and between theatres, including transatlantic movements. For Crisis Response Operations (CRO), it requires the ability to project and support forces outside NATO territory. The need for strategic mobility applies to all Deployable Forces. These forces include High Readiness Forces in limited CROs, Forces of Lower Readiness for rotation and sustainment, and forces of all readiness categories in larger deployments. It also applies to the M&T support necessary to sustain operations.

2. Since the end of the Cold War, the NATO mission spectrum has changed significantly. The continually emerging security risks identified in the latest Alliance Strategic Concept result in a constantly changing and increasingly demanding strategic environment. The dynamic range of these risks dictates that the Alliance develops maximum capability for flexible response options. The Alliance Strategic Concept¹ and the "Military Committee (MC) Directive for Military Implementation of Alliance Strategy"² specified this widened range of NATO's responsibilities, tasks, and missions, in particular with regard to NATO's cooperation with the European Union (EU), the Organization for Security and Cooperation in Europe (OSCE), and the United Nations (UN) if so decided. The Directive also takes account of the "MC Directive for Military Implementation of the Alliance's Combined Joint Task Force (CJTF) Concept". These Directives establish that operations, while using NATO assets, can be conducted beyond the Alliance territory and/or potentially under EU auspices. Non-NATO nations may participate. Also, greater

¹ C-M(99)21

² MC 400/2

emphasis is put on CROs. Additionally, this may require closer cooperation with a number of Non-Governmental Organizations (NGOs).

3. The NATO logistics community, including M&T, recognised that emerging Alliance concepts such as the CJTF and the Multinational Joint Logistic Centre (MJLC), NATO's involvement in CRO, and an ever-expanding range of activities bringing Allied and Partner nations into closer cooperation, pose major challenges. Consequently, the Senior NATO Logisticians' Conference (SNLC) decided to develop logistic support concepts to meet these challenges. C-M(2001)44, NATO Policy for Cooperation in Logistics, is the keystone policy document that establishes the principle of cooperation in logistics among NATO bodies and between NATO and national authorities. MC 319/1, NATO Principles and Policies for Logistics, establishes the principle of collective responsibility for logistics. MC 336, the keystone document for M&T, further elaborates these principles.

4. The April 1999 Washington Summit acknowledged the need for extensive re-evaluation of existing NATO policies and procedures. At this meeting, the NATO Heads of State and Government agreed the NATO Defence Capabilities Initiative (DCI). The objective of the DCI is to ensure the effectiveness of future multinational operations across the full spectrum of Alliance missions in the present and foreseeable security environment with a special focus on improving interoperability among Alliance forces, and where applicable, also between Alliance and Partner forces. Deployability and mobility of forces is one of the five key areas on which DCI concentrates.

PURPOSE

5. This document sets forth NATO's M&T concept, principles and policies, and thereby provides the foundation for development of national and Alliance M&T concepts, principles, policies, structures, directives, and procedures.

SCOPE

6. This document reflects the need to provide timely, effective M&T support to the entire range of NATO operations. This document will outline the NATO M&T concept for support for Article 5 operations and non-Article 5 CRO, identify the factors affecting future M&T support, define M&T principles, policies, and terms, as well as M&T tasks and responsibilities. It also applies to non-NATO nations participating in NATO-led operations.

NATO M&T CONCEPT FOR SUPPORT TO ARTICLE 5 OPERATIONS AND NON-ARTICLE 5 CRO

7. The NATO M&T concept constitutes a single guidance for support to both Article 5 operations and non-Article 5 CRO. The Alliance's M&T capability must be broadly based on NATO and national military and civil resources. It must also provide a flexible but systematic approach to make best use of resources. The objective is to ensure that the Alliance's military effectiveness, in accordance with its Strategic Concept, is able to perform its traditional mission of collective defence as well as to undertake new roles, such as CROs, which are likely to take place beyond the Alliance territory. Specifically:

7.1 Article 5 Operations

7.1.1 All categories of NATO forces are dependent upon M&T for their effective employment.

7.1.2 The increased significance of reinforcement as a main element of NATO defence and force planning requires a credible M&T capability.

7.2 Non-Article 5 CRO

7.2.1 These operations, along with aspects of military command and control, may differ from one another in the scale of contributions by the Allies, by the participation of non-NATO nations, or as a result of a North Atlantic Council (NAC) decision.

7.2.2 Multinational forces will be developed with flexible M&T arrangements capable of undertaking a variety of missions and taking into account national decisions on participation in each operation. Emphasis will be upon the strength of NATO's approach to integrated military structures and agreed principles and policies.

FACTORS AFFECTING FUTURE M&T SUPPORT

8. Uncertainties. Planning for Article 5 operations and non-Article 5 CRO must acknowledge and provide a systematic response to the high degree of uncertainty that will surround future deployments. There will be continued reliance on M&T planning based on operational planning requirements, but with greater emphasis on capability planning, feasibility assessment, and on visibility and transparency of information. Uncertainty includes such factors as:

8.1 The selection of NATO and other forces to be deployed. Non-NATO nations and organizations must be certified by NATO prior to assignment of their forces for NATO-led operations to ensure that their forces meet defined minimum NATO military operational standards.

8.2 The ability of participating nations to deploy their national forces and their national components of multinational forces to the required destination, to meet the NATO Commander's operational requirements.

8.3 The ability to support the specific mission in relation to transportation availability and capability given both commercial market and national legislative constraints.

8.4 The capability, availability and cost of Host Nation (HN) resources and facilities to meet M&T requirements (reference MC 334/1).

8.5 The ability to obtain required transit agreements and diplomatic clearances.

9. M&T Resources

9.1 Military Resources. It is anticipated that military M&T resources will always be limited. Consequently, national military M&T resources, which will be readily available for NATO use, are likely to be tailored to meet the rapid strategic deployment of key elements of the force, and to provide operational and tactical mobility.

9.2 Civil Resources. Owing to the limited availability of military resources, civil M&T resources (air, inland surface, and maritime) may well be necessary to meet both strategic and operational movement requirements in both Article 5 operations and non-Article 5 CRO. Military planning will have to acknowledge that civil transport resources are also limited, are not specifically designed for military use and might therefore be neither available, nor capable of meeting the military requirement. In addition, the greater the scope and the size of the operation, the greater will be the reliance on civil M&T resources.

9.3 Civil Resource Considerations. Based on these factors the following should be considered:

9.3.1 The specific military, political, and legal situations, including the level of risk, involved in the use of civil resources.

9.3.2 The national and international commercial market, economic, and political circumstances which may result in the limited availability of transportation resources.

9.3.3 National arrangements, priorities, and legislation, including specific legal measures to support military movement, e.g., cooperative and/or shared use of transportation resources.

9.3.4 Possible competing demands between military and civil agencies for use of civil M&T resources.

9.3.5 National arrangements which allow use of civil/commercial resources by the military.

9.3.6 Specific NATO and national civil emergency plans, policies and procedures that could influence the availability of national transportation resources, and the use of civil transportation experts.

9.3.7 The possibilities for multinational acquisition (e.g., leasing, chartering, purchasing) of lift assets needed to deploy and support forces in a NATO-led operation including a coordinated approach to the commercial transportation market.

M&T PRINCIPLES

10. C-M(2001)44 and MC 319/1 detail the principles for logistics. These principles are adapted to apply directly to M&T support as follows:

10.1 Collective Responsibility. NATO and nations have a collective responsibility for M&T support. This responsibility extends from initial M&T planning through the strategic deployment, Reception, Staging, and Onward Movement (RSOM), sustainment, to redeployment stages of operations. Specific responsibilities are:

10.1.1 NATO's Responsibility. NATO Commanders are responsible for establishing the M&T requirements and for initiating, prioritising, coordinating and deconflicting the deployment (including RSOM), transportation for sustainment (resupply), and redeployment of forces. This must be done in cooperation with nations.

10.1.2 Nations' Responsibility

10.1.2.1 The nations are responsible for obtaining transportation resources to deploy, sustain, and redeploy their forces. This principle must be balanced with the need for cooperation, coordination and economy, which may result in bilateral and/or multilateral cooperative arrangements.

10.1.2.2 The Sending Nation (SN) is responsible for planning, controlling, and executing the movement of:

- Its national forces,
- National components of multinational forces,
- A multinational headquarters group and/or unit with a high degree of multinationality, if the SN has agreed to assume the Lead Nation (LN) responsibility,
- Forces of other Nations, if agreed.

10.1.2.3 The Host Nation (HN) has the ultimate authority to approve, coordinate and control all movements, including RSOM related activity, on its sovereign territory in accordance with the NATO Commander's priorities.

10.2 Cooperation. Cooperation between NATO and national authorities, both military and civilian, is essential. Such cooperation can be of a bi- or multilateral nature. This includes, as required, non-NATO nations, the UN, and other organizations. This incorporates both cooperative and shared use of lift.

10.3 Coordination. Coordination of M&T between NATO and national military and civilian authorities is essential and must be carried out at the appropriate levels. This includes, as required, non-NATO nations, the UN, and other organizations.

10.4 Effectiveness. M&T planning and execution must be tailored to satisfy the overall NATO operational requirements.

10.5 Efficiency. Use of military and civilian resources, facilities, existing infrastructure and modes of transportation must be optimised. The focus must be on economy of scale. The complementary and intermodular nature of airlift, sea-lift, and inland surface transport resources must be taken into consideration.

10.6 Flexibility. M&T planning and execution must be capable of reacting in a timely manner to changes in the operational situation and/or requirements.

10.7 Simplicity. Plans and procedures should be made as simple as possible.

10.8 Standardization. Standardization contributes to successful M&T. Standardization applies as much to systems, data and software as it does to procedures, equipment (including design) and hardware.

10.9 Transportability. When possible, units and formations with a mobility role should have equipment designed to be compatible with available transport resources.

10.10 Visibility and Transparency. Information exchange of M&T data between NATO and national military and civil authorities is essential for the efficient planning and execution of M&T tasks.

M&T POLICIES

11. General

11.1 NATO and national authorities are responsible for the development of policies, doctrines, procedures and organizations for the M&T of NATO forces.

11.2 The execution of the Nations' responsibility to provide sufficient M&T resources could be hampered by a shortage of required lift assets. Consequently, nations should, where appropriate and possible, make resources and surplus capacity available for cooperative or shared use. These should be responsive to NATO's operational requirements and coordinated at the appropriate level.

11.2.1 Cooperative Use. When nations make transportation resources or their surplus capacity available to other nations, compensation and/or reimbursement will be subject to arrangements between the parties involved, if required.

11.2.2 Shared Use. When nations make transportation resources or their surplus capacity available to NATO, these resources are provided free of charge or under reimbursement arrangements.

11.3 Movement across international borders must be supported by standardized and harmonised arrangements.

11.4 NATO Commanders will review the effectiveness of military arrangements, both NATO and national³, in support of the Alliance's operational M&T requirements.

12. M&T Planning

12.1 M&T planning is a distinct, but integral, part of logistic planning, and must be consistent with force and operational planning.

12.2 NATO and national military authorities are responsible for operational support planning. M&T planning for NATO operations must comply with the priorities set by the appropriate NATO Commander.

12.3 M&T planning must be tailored to the respective forces and their related employment options.

12.4 National and NATO M&T planning must be harmonised as early as possible during the operational planning process (OPP).

12.5 RSOM is the phase of the deployment process that transitions units, personnel, equipment and materiel from arrival at Ports of Debarkation (PODs) to their final destination. The designated Joint Force Commander, in coordination with HN and SN, must develop the RSOM plan in accordance with the Multi-National Detailed Deployment Plan (MNDDP). When HN authorities are not able or not willing to provide the required RSOM support, NATO bears responsibility for assigning an executive authority, or requesting a LN to act as HN on behalf of deploying NATO forces.

12.6 M&T planning must consider the use of Host Nation Support (HNS) and/or local resources, particularly during the RSOM stage.

12.7 NATO and national M&T planning should consider the possibility of pre-positioning of stocks, materiel, and equipment in order to improve M&T reaction time.

12.8 NATO civil transportation experts are a valuable asset and provide information and offer assistance to NATO military planners. SCs should, as required, seek their advice and assistance in all phases of deployment planning (concept development, strategic planning, movement planning, execution planning) and execution.

³ France cannot accept the authority of the NATO commander to review and evaluate national arrangements

12.9 NATO nations and, where appropriate, non-NATO nations are to use the Allied Deployment and Movement System (ADAMS) as the NATO planning tool to facilitate multinational deployment planning and transfer of information (Nations may use ADAMS or some other system to do their internal, national-level deployment planning). Strategic Commands (SCs) or Alliance nations will support non-NATO nations, as appropriate.

12.10 NATO and national military authorities will ensure harmonised casualty evacuation is incorporated into movement plans.

12.11 M&T planning to support military operations must be carried out and coordinated on a combined and joint military/civil basis encompassing all modes of transport. Separate M&T planning for maritime, land and air force packages should be avoided.

13. Civil Support to the Military

13.1 Civil support to the military will be of critical importance in achieving the desired flexibility in support of Alliance objectives. The military will, at the appropriate level, require the close cooperation of the Transportation Planning Boards and Committees (PB&Cs) of the Senior Civil Emergency Planning Committee (SCEPC) and M&T expertise from other sources, as required, to assess and define the capability, availability, and feasibility of civil transport support.

13.2 NATO and nations should make arrangements for close and well structured cooperation between military and civil authorities.

13.3 Nations should ensure that national legislation or other arrangements provide sufficiently for the acquisition of M&T resources for Article 5 operations and non-Article 5 CRO. This process will be monitored in two ways:

13.3.1 The SCs will monitor the development of legislative and other arrangements made by nations as part of the Annual Defence Review (ADR) process⁴.

13.3.2 The SCEPC, through the Transportation PB&Cs, will monitor and advise nations on the adequacy of legislation or other national measures, as appropriate, to support Alliance M&T capabilities.

14. Military Support to Civil Operations. Military support to civil operations will be conducted using the same principles and policies as described in this document.

15. Resource Acquisition

15.1 Nations are responsible for the provision of transportation resources for the movement of their own forces and materiel. National operational support planning

⁴ France does not take part in the ADR process

should involve appropriate national civil as well as military transport authorities in the acquisition process, which should extend as appropriate to both national and non-national sources. Nations should consider:

15.1.1 Entering into bi- or multilateral arrangements with other nations concerning the provision of M&T resources.

15.1.2 Making appropriate arrangements for gaining access to civil transport resources by using normal commercial practices to the maximum extent, including possible use of both non-NATO nations' transportation resources and contractual arrangements that become operative under specific conditions.

15.1.3 Reporting to the appropriate NATO authorities, those military and civil transportation resources and surplus capacity which may be available for cooperative or shared use.

15.1.4 Applying to the appropriate SC for access to transportation resources or surplus capacity made available by nations for cooperative or shared use.

15.1.5 Approaching the civil transportation market in a coordinated manner, thus acquiring resources in accordance with operational priorities and minimising national competition for resources.

15.1.6 Making arrangements for the control or redirection of civil transportation resources, if it appears that the commercial market may be unable to meet requirements. These may be constitutional, statutory, or contractual, and may include bi- or multilateral or Alliance arrangements.

15.2 NATO is responsible for ensuring the provision of transportation resources for the movement of multinational HQ and other common-funded elements.

15.3 Given that civil transportation resources normally operate in market conditions, NATO and national authorities will need to continue to devise collective arrangements which ensure that suitable civil resources can be quickly and reliably obtained.

16. Command, Control, and Communications

16.1 The command and control of M&T resources will remain with the owning nations unless nations have made other arrangements with NATO authorities.

16.2 To be viable, the communications and Automated Data Processing (ADP) systems must provide Commanders with timely information concerning status of force deployment, lines of communications and availability of transportation resources. As ADAMS is NATO's tool for multinational M&T planning, nations are to continue to support the use of ADAMS and communicate M&T data via this system.

M&T TASKS AND RESPONSIBILITIES

17. NATO HQ provides the political and military guidance through consultation with nations for overall M&T matters.

17.1 The International Staff (IS) and the International Military Staff (IMS) assist deployment planning and execution by providing political and military guidance and by *obtaining timely arrangements for the transit of deploying forces through national territory when necessary.*

17.2 The SNLC, as Coordinating Authority for Logistics, is responsible for the coordination and harmonization of the development and implementation of Alliance M&T policies and concepts. The Movement and Transportation Group (M&TG) supports the SNLC with regard to M&T policies and concepts.

17.3 The SCEPC, through its Transportation PB&Cs, supports the NATO Military Authorities, by advising on the availability and use of civil transportation resources and related infrastructure in support of NATO and NATO-led operations, by assisting in the acquisition of civil resources, and by harmonising and standardising civil procedures relating to transport for defence purposes.

18. Strategic Commands (SCs)

18.1 SCs are responsible for matters concerning the development and implementation of operational M&T plans, policies, doctrine and procedures. Under the authority of the SCs, the Combined Joint Planning Staff (CJPS) will develop strategic Contingency Operation Plans (COPs). As the SCs' crisis management organization, the Allied Movement Coordination Centre (AMCC) will coordinate strategic movement, transportation for sustainment (resupply) and redeployment.

18.2 The SCs are responsible to:

18.2.1 Develop the MNDDP based on national DDPs. The MNDDP must be developed in close coordination with the designated Joint Force Commander responsible for the RSOM plan and the authorizing HN.

18.2.2 Address strategic lift shortfalls in cooperation with the nations.

18.2.3 Advise and assist in the development of bilateral or multilateral agreements and arrangements if requested.

18.2.4 Consult when appropriate with experts from the Transportation PB&C's and with other M&T sources.

18.2.5 Prioritise and coordinate the integrated use of M&T resources made available by Nations for shared use.

18.2.6 Coordinate with the Joint Force Commander, who must provide the Statement of Requirement (SOR) in cooperation with the SCs. This

commander gives specific operational guidance by listing priorities, PODs, final destination and sets the Commander's Required Date (CRD).

18.2.7 Coordinate with the Supporting Commander, if appointed, who assists the Designated Commander and ensures the unimpeded flow of reinforcing forces through his AOR.

19. Nations

19.1 Sending Nations (SN) are responsible to:

19.1.1 Develop the national Detailed Deployment Plan (DDP), in ADAMS format, based on the Allied Disposition List (ADL), which includes the Designated NATO Commander's priorities.

19.1.2 Control the movement of national forces and national components of multinational forces, taking into account the Designated NATO Commander's operational requirements.

19.1.3 Determine movement requirements and make necessary transportation arrangements; then work with the SCs to identify shortfalls and surpluses in national M&T resources to meet Alliance movement requirements.

19.1.4 Respond to requests to develop/execute arrangements for cooperative use of lift with other nations, in order to meet overall NATO priorities.

19.1.5 Control and coordinate civil and military transportation resources in support of national and, as required, allied forces.

19.1.6 Provide national liaison/augmentation to the AMCC and, as necessary, to the HN National Movement Coordination Centre (NMCC).

19.2 Host Nations (HN) are responsible to:

19.2.1 Control and coordinate movement of forces, on their own territories, taking into account the designated NATO Commander's priorities and SNs' requirements.

19.2.2 Establish a NMCC and appropriate executive movement control organization for the coordination of M&T.

19.2.3 Control, support and execute their portions of the RSOM plan which has been made in close coordination with the designated Joint Force Commander and SNs.

19.2.4 Identify to the SC the status of M&T resources and infrastructure in support of an operation.

19.2.5 As required, make and/or implement necessary arrangements and coordinate with neighbouring nations to facilitate border crossings.

19.2.6 Control and operate national civil and military transportation resources (e.g., personnel, facilities, equipment, infrastructure) for national and Alliance support.

19.2.7 Provide liaison/augmentation to the AMCC as necessary.

19.3 Lead Nations (LN) are responsible to:

19.3.1 When acting as a SN for multinational headquarters groups and/or units with a high degree of multinationality, it will fulfil all the respective M&T tasks set out in paragraph 19.1 above.

19.3.2 When acting as a HN, conduct either partially or totally the HN tasks and responsibilities set out in paragraph 19.2 above.

19.3.3 As required, take the lead in performing specific M&T tasks as identified by NATO in cooperation with the nations.

19.3.4 Establish arrangements for compensation and/or reimbursement for those LN functions with all parties involved.

IMPLEMENTATION

20. Effective M&T support for forces within the NATO Force Structure is fundamental to mission success. The SCs, in agreement with nations, are to translate this document into doctrine, directives and procedures. Nations are encouraged to adapt their concepts, policies, structures and procedures accordingly.

21. This document supersedes MC 336/1 dated 27 February 1998.

TERMS AND DEFINITIONS

1. **Cooperative Use:** Utilization of resources identified and made available by nations for utilization by other nations. Compensation and/or reimbursement will be subject to agreements between the parties involved, if such compensation and/or reimbursement is required.
2. **Coordinating Authority:** The authority granted to a commander or individual assigned responsibility for coordinating specific functions or activities involving forces of two or more countries or commands, or two or more services or two or more forces of the same service. He has the authority to require consultation between the agencies involved or their representatives, but does not have the authority to compel agreement. In case of disagreement between the agencies involved, he should attempt to obtain essential agreement by discussion. In the event he is unable to obtain essential agreement he shall refer the matter to the appropriate authority. (AAP-6)
3. **Host Nation (HN):** A nation, which receives the forces and/or supplies of allied forces and organizations, located on, operating in, or transiting through its territory. (MC 334/1)
4. **Host Nation Support (HNS):** HNS is civil and military assistance rendered in peace, emergencies, crisis and conflict by a HN to allied forces and organizations which are located on, operating in or transiting through the HN's territory. Arrangements concluded between the appropriate authorities of HN(s) and SN(s) and/or NATO form the basis of such assistance. (MC 334/1)
5. **Infrastructure:** A term generally applicable for all fixed and permanent installations, fabrications, or facilities for the support and control of military forces. (AAP-6)
6. **Lead Nation (Movement and Transportation):** A nation accepting the responsibility for planning and controlling the deployment, transportation for sustainment (resupply) and redeployment as well as for obtaining transportation resources for multinational headquarters groups and/or units with a high degree of multinationality; or accepting the lead in performing Host Nation tasks and responsibilities; or accepting responsibility for performing specific movement and transportation tasks.
7. **Mobility:** A quality or capability of military forces which permits them to move from place to place while retaining the ability to fulfil their primary mission. (AAP-6).

8. **Movement:** The activity required to change the location of formations and units, their personnel, equipment, and/or stocks. Movement may require the supporting capabilities of mobility, transportation, infrastructure, movement control, and support functions.
9. **Movement Control:** The planning, routing, scheduling and control of personnel and cargo movements over lines of communications. (AAP-6)
10. **Policy:** Prudent course of action or conduct to be applied in the application of a principle.
11. **Principle:** A general law which gives action; a fundamental truth as the basis of reasoning.
12. **Sending Nation (Movement and Transportation):** A nation sending or participating in the sending of (deploying) national forces and/or national components of multinational forces. The sending nation may request the use of host nation logistics and administrative support during transit and in the theatre of operations.
13. **Shared Use:** Utilization of resources identified and made available by nations to NATO, free of charge or under reimbursement arrangements predetermined by the provider and NATO.
14. **Strategic Mobility:** Strategic Mobility is the capability to move forces and their associated logistics in a timely and effective manner over long distances. This could be between theatres (inter-theatre), between regions (inter-regional), or beyond NATO's Area of Responsibility.
15. **Transportation:** The means of conveyance to move personnel, equipment and/or stocks, including the requisite materiel handling equipment.
